Both will give you a real-time Apple Apple-Device-Support exam preparation environment and you get experience to attempt the Apple-Device-Support preparation experience before the final exam.

Apple Device Support Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75

Which iPadOS feature should you configure to hide your personal email in the Mail app while you're at work?

- A. Focus filter
- B. Do Not Disturb
- C. Focus schedules
- D. Shortcut automation

Answer: A

Explanation:

Focus filter is a feature in iPadOS that allows you to customize your notifications and home screen based on what you want to focus on. You can create different focus modes for different scenarios, such as work, personal, sleep, or gaming. When you enable a focus

mode, you can choose which apps and people can notify you, and which home screen pages you want to see. You can also use Hide My Email with a focus mode to keep your personal email address private in the Mail app. Hide My Email lets you create unique, random email addresses that forward to your real email account, so you can send and receive emails without revealing your real email address. To use Hide My Email with a focus mode, you need to do the following:

* Create a focus mode for work in Settings > Focus. Tap the plus icon and choose Work, then customize the settings as you like.

You can also set a schedule or location for your focus mode to turn on automatically.

* Subscribe to iCloud+ and enable Hide My Email in Settings > Apple ID > iCloud > Hide My Email.

Tap Create New Address to generate a random email address, and choose a label and a forwarding address for it. You can also create more addresses as needed.

* Open the Mail app and tap the Compose button. Tap the From field and select Hide My Email. Choose the random email address you created for work. Type your email as normal and send it. The recipient will see the random email address instead of your real one.

* When you receive an email to your random email address, you can reply using the same address. The Mail app will automatically use Hide My Email when you reply to an email that was sent to a random email address.

* To manage your random email addresses, go to Settings > Apple ID > iCloud > Hide My Email. You can deactivate, reactivate, or delete any address you created. You can also change the label, the forwarding address, or the signature for each address.

NEW QUESTION # 76

What can you do if you forget your iPhone passcode?

- A. Connect the phone to a mac and erase all content and settings.
- B. Wait for the "forgot your passcode?" prompt to appear and follow the onscreen instructions.
- C. Put the phone in recovery mode and attempt to restore it in Apple Configurator.
- **D. Use your Apple ID to get into your phone.**

Answer: D

NEW QUESTION # 77

Which macOS resource displays the status of network interfaces in a dynamic list?

- A. Internet Accounts settings
- **B. Network settings**
- C. Wireless Diagnostics
- D. VPN settings

Answer: B

NEW QUESTION # 78

Scenario

You're troubleshooting a third-party app that frequently quits on your Mac. You've determined that the issue occurs across all user accounts.

What should be your next step in troubleshooting the app's issue?

- A. Upgrade to the latest version of the app.
- B. Reinstall or upgrade macOS.
- C. Remove the -/Library/Preferences/application name preference file.
- D. Create a new file.
- **E. Troubleshoot application preferences.**

Answer: E

NEW QUESTION # 79

What should you use to troubleshoot macOS installation issues?

- A. Single user mode

- B. Installer log
- C. macOS Recovery Assistant
- D. Apple Diagnostics

Answer: B

Explanation:

The installer log is a useful tool to troubleshoot macOS installation issues. The installer log records the progress and status of the installation process, as well as any errors or warnings that may occur. You can view the installer log during or after the installation by following these steps:

* To view the installer log during the installation, press Command-L on your keyboard. A new window will open showing the log messages. You can press Command-3 to show all messages, or Command-4 to show errors and progress messages only.

* To view the installer log after the installation, open the Console app from the Applications > Utilities folder. In the sidebar, select your Mac under Devices, then choose /var/log > install.log from the list of log files. You can use the search field or the filter bar to find relevant messages.

The installer log can help you identify the cause of the installation issue, such as a corrupted installer file, insufficient disk space, incompatible software, or network problems. You can use the information in the installer log to troubleshoot the issue or contact Apple Support for further assistance.
