It can almost be said that you can pass the ADA-C01 exam only if you choose our ADA-C01 exam braindumps. Our ADA-C01 study materials will provide everything we can do to you. Only should you move the mouse to buy it can you enjoy our full range of thoughtful services. Having said that, why not give our ADA-C01 Preparation materials a try instead of spending a lot of time and effort doing something that you may be not good at? Just give it to us and you will succeed easily.

Snowflake ADA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Disaster Recovery, Backup, and Data Replication: This section of the exam measures the skills of Disaster Recovery Engineers and Cloud Operations Managers and covers Snowflake methods for ensuring business continuity. Candidates must understand how to replicate databases and account-level objects, implement failover strategies, and perform backup and restoration through Time Travel and Fail-safe features. The domain emphasizes replication across accounts, handling data consistency during failover, and applying cost-efficient disaster recovery strategies to maintain availability during outages or regional failures.

Topic 2	<ul style="list-style-type: none"> • Performance Monitoring and Tuning: This section of the exam measures the skills of Cloud Infrastructure Engineers and Performance Analysts and focuses on optimizing Snowflake compute and storage resources. Candidates will need to understand how to configure and manage virtual warehouses, evaluate query profiles, and apply caching and clustering strategies for performance tuning. It also includes monitoring concurrency, resource utilization, and implementing cost optimization strategies. The ability to interpret, explain plans, apply search optimization, and manage cost controls is key for maintaining efficient Snowflake environments.
Topic 3	<ul style="list-style-type: none"> • Snowflake Security, Role-Based Access Control (RBAC), and User Administration: This section of the exam measures the skills of Snowflake Administrators and Cloud Security Engineers and covers authentication, access control, and network management in Snowflake. Candidates must understand how to configure authentication methods such as SSO, MFA, OAuth, and key-pair authentication, and how to manage network policies and private connectivity. The domain also tests knowledge of user and role management using SCIM, designing access control architecture, and applying the RBAC framework to ensure secure user authorization and data protection within Snowflake environments.
Topic 4	<ul style="list-style-type: none"> • Account Management and Data Governance: This section of the exam measures the skills of Data Governance Managers and Database Administrators and covers account organization, access control, and regulatory data protection. Candidates will learn how to manage organizational accounts, encryption keys, and Tri-Secret Secure implementations. It focuses on applying best practices in ORGADMIN and ACCOUNTADMIN roles, implementing masking and row access policies, and performing data classification and tagging. The domain also emphasizes data auditing, account identifiers, and effective management of tables, views, and query operations to support enterprise-wide governance standards.
Topic 5	<ul style="list-style-type: none"> • Data Sharing, Data Exchange, and Snowflake Marketplace: This section of the exam measures the skills of Data Integration Specialists and Data Platform Administrators and covers managing and implementing data-sharing solutions within Snowflake. It evaluates understanding of data sharing models across regions and clouds, secure data sharing methods, and managing provider-consumer relationships. The domain also includes the use of Snowflake Data Exchange and Marketplace to publish, consume, and manage data listings, ensuring secure collaboration and efficient data monetization.

ADA-C01 Certification Questions | ADA-C01 Exam Cost

It is our promissory announcement on our ADA-C01 exam questions that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our ADA-C01 Preparation braindumps are totally the perfect one. And you can find the comments and feedbacks on our website to see that how popular and excellent our ADA-C01 study materials are.

Snowflake SnowPro Advanced Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

An Administrator loads data into a staging table every day. Once loaded, users from several different departments perform transformations on the data and load it into different production tables.

How should the staging table be created and used to MINIMIZE storage costs and MAXIMIZE performance?

- A. Create it as an external table, which will not incur Time Travel costs.
- **B. Create it as a transient table with a retention time of 0 days.**
- C. Create it as a temporary table with a retention time of 0 days.
- D. Create it as a permanent table with a retention time of 0 days.

Answer: B

Explanation:

According to the Snowflake documentation¹, a transient table is a type of table that does not support Time Travel or Fail-safe, which means that it does not incur any storage costs for maintaining historical versions of the data or backups for disaster recovery.

A transient table can be dropped at any time, and the data is not recoverable. A transient table can also have a retention time of 0 days, which means that the data is deleted immediately after the table is dropped or truncated. Therefore, creating the staging table as a transient table with a retention time of 0 days can minimize the storage costs and maximize the performance, as the data is only loaded and transformed once, and then deleted after the production tables are populated. Option A is incorrect because creating the staging table as an external table, which references data files stored in a cloud storage location, can incur additional costs and complexity for data transfer and synchronization, and may not provide the best performance for data loading and transformation. Option C is incorrect because creating the staging table as a temporary table, which is automatically dropped when the session ends or the user logs out, can cause data loss or inconsistency if the session is interrupted or terminated before the production tables are populated. Option D is incorrect because creating the staging table as a permanent table, which supports Time Travel and Fail-safe, can incur additional storage costs for maintaining historical versions of the data and backups for disaster recovery, and may not provide the best performance for data loading and transformation.

NEW QUESTION # 31

What roles can be used to create network policies within Snowflake accounts? (Select THREE).

- A. Any role with the global permission of CREATE NETWORK POLICY
- B. Any role that owns the database where the network policy is created
- C. ORGADMIN
- D. SECURITYADMIN
- E. ACCOUNTADMIN
- F. SYSADMIN

Answer: A,D,E

NEW QUESTION # 32

What are benefits of using Snowflake organizations? (Select TWO).

- A. Administrators have the ability to create accounts in any available cloud provider or region.
- B. Administrators can monitor and understand usage across all accounts in the organization.
- C. User administration is simplified across all accounts within the organization.
- D. Administrators can simplify data movement across all accounts within the organization.
- E. Administrators can change Snowflake account editions on-demand based on need.

Answer: A,B

Explanation:

According to the Snowflake documentation¹, organizations are a feature that allows linking the accounts owned by a business entity, simplifying account management and billing, replication and failover, data sharing, and other account administration tasks. Some of the benefits of using organizations are:

* Administrators can monitor and understand usage across all accounts in the organization using the ORGANIZATION_USAGE schema, which provides historical usage data for all accounts in the organization via views in a shared database named SNOWFLAKE2. This can help to optimize costs and performance across the organization.

* Administrators have the ability to create accounts in any available cloud provider or region using the CREATE ACCOUNT command, which allows specifying the cloud platform and region for the new account³. This can help to meet the business needs and compliance requirements of the organization.

Option A is incorrect because administrators cannot change Snowflake account editions on-demand based on need, but rather have to contact Snowflake Support to request an edition change⁴. Option C is incorrect because administrators cannot simplify data movement across all accounts within the organization, but rather have to enable account database replication for both the source and target accounts, and use the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command to promote a local database to serve as the primary database and enable replication to the target accounts⁵. Option D is incorrect because user administration is not simplified across all accounts within the organization, but rather requires creating and managing users, roles, and privileges for each account separately, unless using a federated authentication method such as SSO or SCIM.

NEW QUESTION # 33

Which Snowflake objects can be managed using SCIM integration? (Select TWO).

- A. Stages

- B. Warehouses
- C. Shares
- **D. Roles**
- **E. Users**

Answer: D,E

Explanation:

Explanation

A SCIM security integration allows the automated management of user identities and groups (i.e. roles) by creating an interface between Snowflake and a third-party Identity Provider (IdP)¹. Snowflake supports SCIM integration with Okta, Azure, and custom SCIM clients². SCIM integration does not support managing other Snowflake objects, such as stages, warehouses, or shares³. Therefore, the answer is B. Users and D. Roles.

NEW QUESTION # 34

A company has set up a new Snowflake account. An Identity Provider (IdP) has been configured for both Single Sign-On (SSO) and SCIM provisioning.

What maintenance is required to ensure that the SCIM provisioning process continues to operate without errors?

- A. The Administrator must issue a POST RENEW call to the REST API at least once every six months.
- B. The IdP Administrator must issue a REFRESH transaction at least once every six months to synchronize all users and roles.
- **C. The OAuth Bearer Tokens have a lifespan of six months and must be regenerated prior to expiration.**
- D. The IdP service account requires a new RSA key pair to be generated every six months.

Answer: C

Explanation:

Explanation

According to the Snowflake documentation¹, the authentication process for SCIM provisioning uses an OAuth Bearer token and this token is valid for six months. Customers must keep track of their authentication token and can generate a new token on demand. If the token expires, the SCIM provisioning process will fail.

Therefore, the token must be regenerated before it expires. The other options are not required for SCIM provisioning.

NEW QUESTION # 35

.....

Different from the common question bank on the market, ADA-C01 exam guide is a scientific and efficient learning system that is recognized by many industry experts. In normal times, you may take months or even a year to review a professional exam, but with ADA-C01 exam guide you only need to spend 20-30 hours to review before the exam. And with ADA-C01 learning question, you will no longer need any other review materials, because our study materials already contain all the important test sites. At the same time, ADA-C01 test prep helps you to master the knowledge in the course of the practice.
