

Real AWS-Solutions-Architect-Associate Exams - Reguler AWS-Solutions-Architect-Associate Update

Amazon (AWS) Certification Details

AWS Solutions Architect Associate (SAA-C03)

Prior Certification Not Required	Exam Validity 3 Years	Exam Fee \$150 USD
Exam Duration 130 minutes	No. of Questions 60-70	Passing Marks 70-75%
Recommended Experience At least 1 year of hands-on experience designing secure, high-performing, cost-effective, and scalable systems on AWS		Exam Format Multiple Choice & Multiple Select
Languages English, French, German, Italian, Japanese, Korean, Portuguese, Simplified Chinese, and Spanish		

What's more, part of that PDFVCE AWS-Solutions-Architect-Associate dumps now are free: <https://drive.google.com/open?id=1cIS9uZPsO7liKST4VXibD7PSRUb2zXSv>

In addition to the PDF questions PDFVCE offers desktop AWS-Solutions-Architect-Associate practice exam software and web-based AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) practice exam, to help you cope with AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) exam anxiety. These Amazon AWS-Solutions-Architect-Associate Practice Exams simulate the actual Amazon AWS-Solutions-Architect-Associate exam conditions and provide you with an accurate assessment of your readiness for the AWS-Solutions-Architect-Associate exam.

Our AWS-Solutions-Architect-Associate study materials are different from common study materials, which can motivate you to concentrate on study. Up to now, many people have successfully passed the AWS-Solutions-Architect-Associate exam with our assistance. So you need to be brave enough to have a try. We can guarantee that you will love learning our AWS-Solutions-Architect-Associate Preparation engine as long as you have a try on it. And you can free download the demos of our AWS-Solutions-Architect-Associate learning guide on our website, it is easy, fast and convenient.

Reguler AWS-Solutions-Architect-Associate Update - Certification AWS-Solutions-Architect-Associate Training

Each format has a pool of AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) actual questions which have been compiled under the guidance of thousands of professionals worldwide. Questions in this product will appear in the Amazon AWS-Solutions-Architect-Associate final test. Hence, memorizing them will help you get prepared for the AWS-Solutions-Architect-Associate examination in a short time. The product of PDFVCE comes in PDF, desktop practice exam software, and AWS-Solutions-Architect-Associate web-based practice test. To give you a complete understanding of these formats, we have discussed their features below.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q89-Q94):

NEW QUESTION # 89

A company is deploying a new application on Amazon EC2 instances. The application writes data to Amazon Elastic Block Store (Amazon EBS) volumes. The company needs to ensure that all data that is written to the EBS volumes is encrypted at rest. Which solution will meet this requirement?

- **A. Create the EBS volumes as encrypted volumes. Attach the EBS volumes to the EC2 instances**
- B. Create an EC2 instance tag that has a key of Encrypt and a value of True. Tag all instances that require encryption at the EBS level.
- C. Create an AWS Key Management Service (AWS KMS) key policy that enforces EBS encryption in the account. Ensure

- that the key policy is active
- D. Create an IAM role that specifies EBS encryption. Attach the role to the EC2 instances.

Answer: A

Explanation:

The solution that will meet the requirement of ensuring that all data that is written to the EBS volumes is encrypted at rest is B. Create the EBS volumes as encrypted volumes and attach the encrypted EBS volumes to the EC2 instances. When you create an EBS volume, you can specify whether to encrypt the volume. If you choose to encrypt the volume, all data written to the volume is automatically encrypted at rest using AWS- managed keys. You can also use customer-managed keys (CMKs) stored in AWS KMS to encrypt and protect your EBS volumes. You can create encrypted EBS volumes and attach them to EC2 instances to ensure that all data written to the volumes is encrypted at rest.

NEW QUESTION # 90

A company deploys an application on five Amazon EC2 instances. An Application Load Balancer (ALB) distributes traffic to the instances by using a target group. The average CPU usage on each of the instances is below 10% most of the time. With occasional surges to 65%.

A solution architect needs to implement a solution to automate the scalability of the application. The solution must optimize the cost of the architecture and must ensure that the application has enough CPU resources when surges occur.

Which solution will meet these requirements?

- A. Create an EC2 Auto Scaling. Select the existing ALB as the load balancer and the existing target group. Set the minimum instances to 2, the desired capacity to 3, and the maximum instances to 6. Add the EC2 instances to the Scaling group.
- B. Create an EC2 Auto Scaling. Select the existing ALB as the load balancer and the existing target group as the target group. Set a target tracking scaling policy that is based on the ASGAverageCPUUtilization metric. Set the minimum instances to 2, the desired capacity to 3, the maximum instances to 6, and the target value to 50%. Add the EC2 instances to the Auto Scaling group.
- C. Create an Amazon CloudWatch alarm that enters the ALARM state when the CPUUtilization metric is less than 20%. Create an AWS Lambda function that the CloudWatch alarm invokes to terminate one of the EC2 instances in the ALB target group.
- D. Create two Amazon CloudWatch alarms. Configure the first CloudWatch alarm to enter the ALARM state when the average CPUUtilization metric is below 20%. Configure the second CloudWatch alarm to enter the ALARM state when the average CPUUtilization metric is above 50%. Configure the alarms to publish to an Amazon Simple Notification Service (Amazon SNS) topic to send an email message. After receiving the message, log in to decrease or increase the number of EC2 instances that are running.

Answer: B

Explanation:

* An Auto Scaling group will automatically scale the EC2 instances to match changes in demand. This optimizes cost by only running as many instances as needed.

* A target tracking scaling policy monitors the ASGAverageCPUUtilization metric and scales to keep the average CPU around the 50% target value. This ensures there are enough resources during CPU surges.

* The ALB and target group are reused, so the application architecture does not change. The Auto Scaling group is associated to the existing load balancer setup.

* A minimum of 2 and maximum of 6 instances provides the ability to scale between 3 and 6 instances as needed based on demand.

* Costs are optimized by starting with only 3 instances (the desired capacity) and scaling up as needed. When CPU usage drops, instances are terminated to match the desired capacity.

NEW QUESTION # 91

A company is migrating a three-tier application to AWS. The application requires a MySQL database. In the past, the application users reported poor application performance when creating new entries. These performance issues were caused by users generating different real-time reports from the application during working hours.

Which solution will improve the performance of the application when it is moved to AWS?

- A. Create an Amazon Aurora MySQL Multi-AZ DB cluster with multiple read replicas. Configure the application reader endpoint for reports.
- B. Create the database on a compute optimized Amazon EC2 instance. Ensure compute resources exceed the on-premises

database.

- C. Create an Amazon Aurora MySQL Multi-AZ DB cluster. Configure the application to use the backup instance of the cluster as an endpoint for the reports.
- D. Import the data into an Amazon DynamoDB table with provisioned capacity. Refactor the application to use DynamoDB for reports.

Answer: A

Explanation:

Explanation

Amazon RDS Read Replicas Now Support Multi-AZ Deployments

Starting today, Amazon RDS Read Replicas for MySQL and MariaDB now support Multi-AZ deployments.

Combining Read Replicas with Multi-AZ enables you to build a resilient disaster recovery strategy and simplify your database engine upgrade process.

Amazon RDS Read Replicas enable you to create one or more read-only copies of your database instance within the same AWS Region or in a different AWS Region. Updates made to the source database are then asynchronously copied to your Read Replicas. In addition to providing scalability for read-heavy workloads, Read Replicas can be promoted to become a standalone database instance when needed.

Amazon RDS Multi-AZ deployments provide enhanced availability for database instances within a single AWS Region. With Multi-AZ, your data is synchronously replicated to a standby in a different Availability Zone (AZ). In the event of an infrastructure failure, Amazon RDS performs an automatic failover to the standby, minimizing disruption to your applications.

You can now use Read Replicas with Multi-AZ as part of a disaster recovery (DR) strategy for your production databases. A well-designed and tested DR plan is critical for maintaining business continuity after a disaster. A Read Replica in a different region than the source database can be used as a standby database and promoted to become the new production database in case of a regional disruption.

You can also combine Read Replicas with Multi-AZ for your database engine upgrade process. You can create a Read Replica of your production database instance and upgrade it to a new database engine version. When the upgrade is complete, you can stop applications, promote the Read Replica to a standalone database instance, and switch over your applications. Since the database instance is already a Multi-AZ deployment, no additional steps are needed.

Overview of Amazon RDS Read Replicas

Deploying one or more read replicas for a given source DB instance might make sense in a variety of scenarios, including the following:

Scaling beyond the compute or I/O capacity of a single DB instance for read-heavy database workloads. You can direct this excess read traffic to one or more read replicas.

Serving read traffic while the source DB instance is unavailable. In some cases, your source DB instance might not be able to take I/O requests, for example due to I/O suspension for backups or scheduled maintenance. In these cases, you can direct read traffic to your read replicas. For this use case, keep in mind that the data on the read replica might be "stale" because the source DB instance is unavailable.

Business reporting or data warehousing scenarios where you might want business reporting queries to run against a read replica, rather than your primary, production DB instance.

Implementing disaster recovery. You can promote a read replica to a standalone instance as a disaster recovery solution if the source DB instance fails.

NEW QUESTION # 92

Fill in the blanks: The base URI for all requests for instance metadata is _____

- A. <http://169.254.169.254/latest/>
- B. <http://254.169.169.254/latest/>
- C. <http://127.0.0.1/latest/>
- D. <http://169.169.254.254/latest/>

Answer: A

NEW QUESTION # 93

Is there a limit to the number of groups you can have?

- A. Yes for all users except root

- B. Yes unless special permission granted
- C. No
- **D. Yes for all users**

Answer: D

NEW QUESTION # 94

.....

Our AWS-Solutions-Architect-Associate study prep has a pass rate of 98% to 100% because of the high test hit rate. So our AWS-Solutions-Architect-Associate study materials are not only effective but also useful. As we all know, time is very important to everyone. Some candidates are very busy with their own work and families. It is very difficult to take time out to review the AWS-Solutions-Architect-Associate Exam. But if you use AWS-Solutions-Architect-Associate exam materials, you will learn very little time and have a high pass rate. Our AWS-Solutions-Architect-Associate study materials are worthy of your trust.
