

Foundations-of-Programming-Python Valid Dumps & Relevant Foundations-of-Programming-Python Exam Dumps

Many clients worry that after they our Foundations-of-Programming-Python exam simulation they may fail in the test and waste their money and energy. There are no needs to worry about that situation because our study materials boost high passing rate and hit rate and the possibility to fail in the Foundations-of-Programming-Python test is very little. Just consider that our pass rate of the Foundations-of-Programming-Python study guide is high as 98% to 100%, which is unique in the market. And you will get the best pass percentage with our Foundations-of-Programming-Python learning questions.

We are determined to give hand to the candidates who want to pass their Foundations-of-Programming-Python exam smoothly and with ease by their first try. Our professional experts have compiled the most visual version of our Foundations-of-Programming-Python practice materials: the PDF version, which owns the advantage of convenient to be printed on the paper. Besides, you can take notes on it whenever you think of something important. The PDF version of our Foundations-of-Programming-Python study quiz will provide you the most flexible study experience to success.

Relevant Foundations-of-Programming-Python Exam Dumps - Latest Foundations-of-Programming-Python Exam Papers

We would like to provide our customers with different kinds of Foundations-of-Programming-Python practice torrent to learn, and help them accumulate knowledge and enhance their ability. Besides, we guarantee that the questions of all our users can be answered by professional personal in the shortest time with our Foundations-of-Programming-Python study guide. One more to mention, we can help you make full use of your sporadic time to absorb knowledge and information. In a word, compared to other similar companies aiming at Foundations-of-Programming-Python Test Prep, the services and quality of our products are highly regarded by our customers and potential clients.

WGU Foundations of Programming (Python) - E010 JIV1 Sample Questions (Q28-Q33):

NEW QUESTION # 28

In Python, what must follow the `in` keyword in a `for` loop?

- A. A number
- B. A condition
- C. A variable name
- D. An iterable object

Answer: D

Explanation:

In a Python for loop, the in keyword is followed by an iterable object, such as a list, string, tuple, dictionary, set, or range() object.

Example:

```
for name in [ " Alice ", " Bob ", " Carol " ]:  
    print(name)
```

Here, [" Alice ", " Bob ", " Carol "] is the iterable object. Python's documentation explains that a for statement iterates over the items of a sequence or other iterable object.

Therefore, the correct answer is B. An iterable object.

NEW QUESTION # 29

Complete the function get_dict_keys(data) that takes a dictionary and returns a list of all its keys.

For example, get_dict_keys({ " name " : " John ", " age " : 25 }) should return [" name ", " age "].

```
def get_dict_keys(data):  
    # TODO: Return a list of all dictionary keys  
    pass
```

Answer:

Explanation:

See the Step by Step Solution below in Explanation.

Explanation:

Step 1: A dictionary stores data as key-value pairs.

Step 2: The .keys() method returns the dictionary's keys.

Step 3: To return the keys as a list, use list(data.keys()).

Correct code:

```
def get_dict_keys(data):  
    return list(data.keys())
```

Example:

```
print(get_dict_keys({ " name " : " John ", " age " : 25 }))
```

Output:

```
[ ' name ', ' age ' ]
```

NEW QUESTION # 30

Which components are required in every Python for loop?

- A. A condition, a counter, and a break statement
- B. A list index, a range limit, and a step value
- **C. A variable, an iterable, and an indented code block**
- D. A function call, a parameter, and a return value

Answer: C

Explanation:

A Python for loop is used to iterate over an iterable object, such as a list, tuple, string, dictionary, set, or range() object.

A basic for loop needs:

A loop variable

An iterable object

An indented code block

Example:

```
for number in range(3):  
    print(number)
```

In this example:

number is the loop variable.

range(3) is the iterable.

print(number) is the indented code block that runs during each loop iteration.

According to the official Python documentation, the for statement is a construct that works with iterable objects.

Therefore, the correct answer is A. A variable, an iterable, and an indented code block.

NEW QUESTION # 31

What must a developer do to run Python code written in a text editor?

- A. Convert the code to machine language first.
- B. Press a run button within the editor.
- C. Upload the code to a web server.
- **D. Save the file and use a Python interpreter.**

Answer: D

Explanation:

When Python code is written in a text editor, the developer should save the file, usually with a .py extension, and run it using the Python interpreter.

Example terminal command:

```
python script.py
```

Python's documentation explains that a Python module is a file containing Python definitions and statements, usually saved with the .py suffix.

Therefore, the correct answer is A. Save the file and use a Python interpreter.

NEW QUESTION # 32

What happens when the Run button is clicked in a Python development environment?

- A. The file is saved without being executed.
- **B. The currently open Python script is executed.**
- C. A file browser window opens.
- D. The code is converted to a different programming language.

Answer: B

Explanation:

In a Python development environment, clicking the Run button generally executes the currently open Python script or selected code.

For example, if the current script contains:

```
print("Hello, Python!")
```

clicking Run executes the script and displays the output:

```
Hello, Python!
```

In Python's IDLE environment, the Run Module command runs the current module. The Python documentation describes IDLE as Python's editor and shell and includes a Run menu for running Python code.

The Run button does not simply open a file browser, save the file without execution, or convert Python code into another programming language.

Therefore, the correct answer is B. The currently open Python script is executed.

NEW QUESTION # 33
