We can confidently say that Our Portworx-Enterprise-Professional training quiz will help you. First of all, our company is constantly improving our products according to the needs of users. If you really want a learning product to help you, our Portworx-Enterprise-Professional study materials are definitely your best choice, you can't find a product more perfect than it. Second, our Portworx-Enterprise-Professional learning questions have really helped a lot of people. Looking at the experiences of these seniors, I believe that you will definitely be more determined to pass the Portworx-Enterprise-Professional exam.

## Pure Storage Portworx-Enterprise-Professional Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.</li></ul>

## Portworx-Enterprise-Professional Certified & Portworx-Enterprise-Professional Test Question

The PDF format is designed to use on laptops, tablets, and smartphones. It is an ideal format to prepare for the Pure Certified Portworx Enterprise Professional (PEP) Exam (Portworx-Enterprise-Professional) certification exam anywhere anytime. The customers can even store the Portworx-Enterprise-Professional Practice Test material in the form of printed notes because the PDF file is printable.

### Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q59-Q64):

#### NEW QUESTION # 59

An infrastructure admin wants to restrict installing Portworx on two nodes.

What label does the node need to have?

- A. px/storage-node=false
- B. px/service=stop
- C. px/enabled=false

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx uses node labeling as a mechanism to control on which Kubernetes nodes Portworx is installed and allowed to operate. To restrict Portworx installation on specific nodes, those nodes should be labeled with px/enabled=false. This label tells the Portworx Operator or installation scripts to exclude these nodes from Portworx deployment, preventing Portworx daemons from running there. This feature is useful for reserving nodes for non-storage workloads or avoiding unsupported hardware. Labels like px/service=stop or px/storage-node=false are not recognized by Portworx as controls for installation exclusion. The official Portworx deployment and node labeling documentation specify px/enabled=false as the standard method for controlling node participation in the storage cluster, offering administrators fine-grained control over cluster topology and resource allocation [【Pure Storage Portworx Deployment Guide source】](#).

#### NEW QUESTION # 60

Which command should an administrator run to initiate the license expansion for a blue-green upgrade in a Portworx cluster?

- A. pxctl node expand --start
- B. pxctl cluster expand -start
- C. pxctl license expand --start

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

During blue-green upgrades or license expansions in Portworx clusters, administrators use the command pxctl license expand --start to initiate the license expansion process. This command signals Portworx to begin applying the new license, enabling additional nodes or features as permitted. The process is carefully managed to avoid disruption during the upgrade and ensure that new license entitlements are recognized. The Portworx upgrade and licensing documentation specify this command as the official method for license expansion, ensuring compliance and seamless cluster scaling during complex upgrade workflows [【Pure Storage Portworx License Management Guide source】](#).

#### NEW QUESTION # 61

What option can a Portworx administrator use to perform snapshots of Repl 2 or 3 volumes when there is limited space on the cluster and no Object Store is configured?

- A. Skinny Snapshot

- B. Local Snapshot
- C. Cloud Snapshot

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Skinny Snapshots are a space-efficient snapshot technique used by Portworx for replicated volumes (Rep 2 or 3) when storage capacity is limited and no external Object Store is configured. Unlike full snapshots that duplicate data blocks, skinny snapshots capture only the differences (deltas) since the last snapshot, minimizing space consumption. This method allows administrators to take frequent snapshots without significantly impacting storage availability. Skinny Snapshots are particularly useful for on-premises environments or clusters without access to cloud object storage, balancing snapshot granularity with resource constraints. Official Portworx snapshot documentation explains how skinny snapshots work internally, improving backup and recovery capabilities under tight storage conditions without requiring cloud integration [【Pure Storage Portworx Snapshot Guide source】](#).

## NEW QUESTION # 62

What are the two components of Stork?

- A. Stork object store and S3 bucket
- B. Stork snapshots and restores
- C. Stork scheduler and an extender

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Stork (Storage Orchestrator for Kubernetes) is a Portworx utility designed to improve Kubernetes storage orchestration. Its two main components are the Stork scheduler and the Stork extender. The scheduler works by placing pods in Kubernetes clusters based on storage constraints, such as volume affinity and anti-affinity, improving application resiliency and data locality. The extender integrates with Kubernetes' default scheduler, influencing pod scheduling decisions to respect storage policies and optimize workload placement. Together, these components enable advanced features such as application-aware migration, snapshot management, and backup coordination. Portworx documentation explains that Stork's design helps maintain stateful application availability during scaling, upgrades, or disaster recovery scenarios by making Kubernetes scheduling storage-aware [【Pure Storage Portworx Stork Guide source】](#).

## NEW QUESTION # 63

What command should be used to add a new drive to an existing storage cluster?

- A. pxctl service drive add -drive /dev/dm-1 -operation start
- B. pxctl sv nw -a
- C. pxctl service pool update -resize new-disk 150

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Adding a new drive to an existing Portworx storage cluster involves bringing the physical device online for Portworx management. The correct command for this is pxctl service drive add -drive /dev/dm-1 -operation start. This command instructs Portworx to recognize and incorporate the new drive specified by the device path (e.g., /dev/dm-1) into its storage pool. After this operation, Portworx can use the drive for provisioning volumes or expanding capacity. The -operation start flag signals Portworx to initialize and prepare the drive for use. This method is part of Portworx's dynamic storage management capabilities, allowing flexible scaling of storage resources without downtime. Official CLI documentation outlines this command as the supported approach to adding drives to running clusters safely and efficiently [【Pure Storage Portworx CLI Guide source】](#).
