

Construction Specifications Institute CDT模擬試験問題集 & CDTサンプル問題集

LOMONSOD, MA. CLARICE S.

The Construction Specifications Institute (CSI)

The CSI is the founding institution for organizing and coding specifications related to construction projects. The CSI MasterFormat is often referred to as the "Dewey Decimal System" of construction since it creates uniformity and structure in the industry through its numbering system.

Among the primary advantages of having a single organization system is that it improves communication among contractors, it simplifies finding and organizing construction documents, and it allows project owners to easily compare bids from multiple contractors.

MasterFormat 1995 Edition. In this edition, the MasterFormat was only composed of 16 Divisions. As the decades go by and the innovation in construction continues to develop, the CSI MasterFormat officially expanded from 16 to 50 divisions.

MASTERFORMAT SPECIFICATION DIVISIONS (16 DIVISIONS)

- Division 01 — General Requirement
- Division 02 — Site Works
- Division 03 — Concrete
- Division 04 — Masonry
- Division 05 — Metals
- Division 06 — Wood and Plastics
- Division 07 — Thermal and Moisture Protection
- Division 08 — Doors and Windows
- Division 09 — Finishes
- Division 10 — Specialties
- Division 11 — Equipment
- Division 12 — Furnishings
- Division 13 — Special Construction
- Division 14 — Conveying Systems
- Division 15 — Mechanical/Plumbing
- Division 16 — Electrical

Division 01: General Requirement

- This division includes general administrative and technical provisions that may not be listed elsewhere, and which may apply to more than one division.
- General requirements include the following:
 - Contractual/ legal requirements
 - Summary of work to be done
 - Explanation of work to be performed later
 - Description of meetings to be held such as construction coordination meetings, scheduling meetings and progress meetings
 - Quality control
 - And submittal which refers to catalog descriptions or "shop drawings" of equipment, which are submitted by the contractor for approval by the architect and/ or engineer.

試験の準備方法-正確的なCDT模擬試験問題集試験-真実的なCDTサンプル問題集

当社は、他人からのコンテンツを切り取って貼り付けて受験者に販売するだけの無責任な会社ではなく、非常

にうまく業務を遂行しています。当社のCDT練習資料により、多くのお客様がサービス全体の快適な体験を得ることができ、もちろんCDTスタディガイドに合格しています。一部の試験受験者は、有用なCDTの実際のテストを切望しているため、当社の製品は、効率的な練習資料が非常に不足しているお客様やその他のお客様に役立ちます。

Construction Specifications Institute Construction Documents Technologist 認定 CDT 試験問題 (Q59-Q64):

質問 # 59

Which of the following elements should be included in Supplementary Conditions?

- A. Equal employment opportunity requirements
- B. Claims and dispute resolution requirements
- C. Termination of the work by owner or contractor
- D. Requirements for a schedule of values

正解: A

解説:

CSI organizes the contract documents into a logical hierarchy:

* General Conditions - Standard baseline clauses on rights, responsibilities, procedures (e.g., claims, dispute resolution, termination, payments, schedule of values reference).

* Supplementary Conditions - Project-specific modifications or additions to the General Conditions, often driven by laws, funding requirements, or owner policies.

* Division 01 - General Requirements - Administrative and procedural requirements specific to the project (submittals, schedule of values procedures, temporary facilities, etc.), coordinated with the Conditions of the Contract.

CSI's guidance (as used for CDT) explains that Supplementary Conditions are the place to add or modify contract conditions to comply with local laws, regulations, and owner requirements that go beyond or differ from the standard General Conditions. Typical items include:

* Project-specific insurance requirements and limits,

* Local wage requirements,

* Equal Employment Opportunity (EEO) and affirmative action provisions,

* Special regulatory or funding-agency conditions.

Therefore, Equal Employment Opportunity requirements belong properly in Supplementary Conditions, making Option C the CSI-consistent answer.

Why the others are incorrect in CSI's structure:

* A. Requirements for a schedule of values CSI places the detailed procedures and requirements for the schedule of values in Division 01 - General Requirements, not in the Supplementary Conditions.

The General Conditions may mention the schedule of values at a high level, but the "how to" (formats, breakdown, submission procedures) belongs in Division 01, not Supplementary Conditions.

* B. Claims and dispute resolution requirements Standard claims and dispute resolution clauses are part of the General Conditions (for example, notice requirements, initial decision-maker roles, mediation/arbitration steps). Supplementary Conditions may modify certain aspects if needed, but the base provisions themselves are not created there; they originate in the General Conditions.

* D. Termination of the work by owner or contractor Termination rights (for cause or for convenience) and their procedures are fundamental contract provisions that belong in the General Conditions. Like claims, they can be adjusted in Supplementary Conditions, but the primary termination clauses are part of the standard General Conditions text, not something you "include" first in Supplementary Conditions.

Key CSI-aligned references (no links):

* CSI CDT Body of Knowledge - organization of the Project Manual and correct placement of Division 01, General Conditions, and Supplementary Conditions content.

質問 # 60

Which of the following is a component of project design team coordination during the construction documents phase?

- A. Requiring the owner to hire a third-party to write the Division 01 specifications independently
- B. Duplication of important information by each discipline
- C. Quality assurance tasks shared between design and consulting teams

- D. Ensuring drawing note terminology is differentiated from specification terminology

正解: C

解説:

During the construction documents phase, CSI's guidance emphasizes that coordination between the architect/engineer (A/E) and the various consulting disciplines (structural, mechanical, electrical, etc.) is essential to produce consistent, coordinated, and complete contract documents (drawings, specifications, and project manual). Part of that coordination is a shared quality assurance (QA) effort among the design team members.

In CSI's practice guides and CDT body of knowledge, the following principles are stressed (paraphrased to respect copyright):

- * The prime design professional is responsible for overall coordination of the construction documents, but each consultant is responsible for the technical accuracy and coordination of their own portions.
- * Coordination includes review of cross-references, matching terminology, alignment of requirements between drawings and specifications, and resolving conflicts before bid/issue.
- * Quality assurance during this phase is not done in isolation; it is a team activity. Consultants and the lead design firm review each other's work where it interfaces (e.g., architectural and mechanical coordination of ceilings and diffusers; structural and architectural coordination of openings, etc.).

Therefore, "Quality assurance tasks shared between design and consulting teams" (Option D) correctly describes a standard component of project design team coordination during the construction documents phase.

Why the other options are incorrect:

- * A. Duplication of important information by each discipline CSI stresses "say it once, in the right place" as a fundamental principle. Information should not be unnecessarily duplicated because duplication increases the risk of conflict and inconsistency (for example, a requirement shown in both drawings and multiple spec sections but updated in only one location). Coordination aims to avoid duplication, not to promote it.
- * B. Ensuring drawing note terminology is differentiated from specification terminology CSI emphasizes consistent terminology across drawings, specifications, and other documents. The same items (e.g., "gypsum board," "reinforcing steel," "membrane roofing") should be described using the same terms in both drawings and specifications to reduce ambiguity. Coordination meetings often include checking that terminology is aligned, not intentionally differentiated.
- * C. Requiring the owner to hire a third-party to write the Division 01 specifications independently Division 01 - General Requirements - is typically prepared or controlled by the lead design professional or specifier, in coordination with the owner. CSI materials do not identify it as a standard or required coordination practice for the owner to hire an independent third party to write Division

01 separately from the design team. That may occur on some projects, but it is not a defined component of team coordination in CSI's CDT framework.

In summary, CSI-based construction documentation practice defines coordination during the construction documents phase as a shared responsibility among the architect/engineer and all consultants, including joint quality assurance reviews, consistency checks, and cross-discipline coordination. This aligns directly with Option D.

質問 # 61

What governs Division 01 specifications and general requirements?

- A. Divisions 02-49
- **B. The general conditions of the construction contract**
- C. Part I general
- D. The construction drawings

正解: B

質問 # 62

Which document directly modifies the requirements of the general conditions?

- A. Agreement
- **B. Supplementary Conditions**

- C. Division 01, General Requirements
- D. Instructions to Bidders

正解: B

質問 # 63

In the MasterFormat spec system, which subgroup contains requirements of MEP, fire protection, and telecom systems?

- A. Part 2 - Products
- B. Site and Infrastructure Subgroup (Div 30-39)
- C. Facility Services Subgroup (Div 20-29)
- D. Facility Construction Subgroup (Div 02-19)

正解: C

質問 # 64
