Cisco Designing Cisco Security Infrastructure Sample Questions (Q49-Q54):

NEW QUESTION # 49
How does a SOC leverage flow collectors?

- A. It provides data for analysis in threat detection and response system.
- B. It performs data backup and recovery.
- C. It performs load balancing capabilities across systems to optimize performance.
- D. It provides real time content filtering.

Answer: A

Explanation:
A flow collector gathers metadata about network traffic (such as NetFlow or IPFIX), which SOC analysts use to analyze communication patterns. This data is critical for threat detection and response, helping identify anomalies, lateral movement, or potential attacks.

NEW QUESTION # 50
A legal services company wants to prevent remote employees from accessing personal email and social media accounts while using corporate laptops. Which security solution enforces the policy?

- A. Cisco Umbrella
- B. RADIUS server
- C. Cisco TrustSec
- D. network monitoring tool

Answer: A

Explanation:
Cisco Umbrella provides DNS-layer security and content filtering, allowing organizations to block categories such as personal email and social media. This enforces acceptable-use policies for remote employees regardless of where they connect, ensuring corporate devices comply with security requirements.

NEW QUESTION # 51

In preparation for an upcoming security audit, a metal production company decided to enhance the security of container-based services running in a Kubernetes environment. The company wants to ensure that all communications between applications and services are encrypted. The administrator plans to implement mTLS service between application and services to secure the data exchanges. Given the need to manage encryption at scale and maintain efficient communication across the cluster, which network transport technology must be employed?

- A. Service Mesh
- B. ingress controller
- C. load balancing
- D. Kubernetes network policies

Answer: A

Explanation:
A Service Mesh provides built-in support for mutual TLS (mTLS) between microservices, ensuring encrypted communication at scale in Kubernetes environments. It also centralizes management of certificates, keys, and security policies, making it the right choice for securing data exchanges across the cluster.

NEW QUESTION # 52

A technology company has many remote workers who access corporate resources from various locations. The company must ensure that security policies are managed and enforced directly on endpoints, and endpoints are protected from threats regardless of location. Which firewall architecture meets the requirements?

- A. next-generation firewall
- B. traditional firewall
- C. host-based firewall
- D. web application firewall

Answer: C

Explanation:
A host-based firewall enforces security policies directly on endpoints, ensuring they remain protected regardless of location. This architecture provides consistent defense for remote workers accessing corporate resources from outside the traditional network perimeter.

NEW QUESTION # 53

A global energy company moved a monolithic application from the data center to public cloud.
Over time, the company added many capabilities to the application, and it is now difficult for the application team to scale it. The application owner decided to modernize the application by moving to a Kubernetes cluster. However, he wants to ensure that the new application architecture provides a container network interface that is scalable, offers options for cloud-native security, and helps with visibility and observability. Which solution must be used to accomplish the task?

- A. Cilium
- B. ingress gateway
- C. ENI

- D. security group

Answer: A

Explanation:
Cilium is a Kubernetes Container Network Interface (CNI) that provides scalability, cloud-native security with eBPF-based enforcement, and strong visibility/observability into network traffic between microservices. It is purpose-built to modernize applications running in Kubernetes clusters.
