Our C-ACDET-2506 quiz guide is based on the actual situation of the customer.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q23-Q28):

NEW QUESTION # 23

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To Test and Validate the solution prior to go-live
- B. To advise the customer and partner in solution configurations
- C. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations
- D. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions

Answer: C

NEW QUESTION # 24

During which SAP Activate Methodology phase do you define the customer requirements?

- A. Design
- **B. Explore**
- C. Define
- D. Discover

Answer: B

NEW QUESTION # 25

During which SAP Activate Methodology phase do you define the customer requirements?

- A. Design
- **B. Explore**
- C. Define
- D. Discover

Answer: B

Explanation:

SAP Activate's Explore phase is focused on refining and validating customer requirements through fit-to-standard workshops. During this phase, project teams analyze SAP best practice processes alongside customer business needs, identifying configuration gaps and defining functional requirements.

Design as a distinct phase has been replaced by the more agile Explore phase, focusing on solution validation.

The Discover phase focuses on solution evaluation and strategy alignment, not detailed requirements gathering. The term "Define" is not part of SAP Activate methodology.

Proper requirements definition during Explore ensures that the configurations built in Realize align with business needs, reducing rework and enhancing solution adoption. This methodology reflects SAP's emphasis on agile and iterative project delivery within cloud and hybrid deployments.

NEW QUESTION # 26

How can you set the order of your custom Contract Workspace fields? (Select 2 correct answers)

- **A. Select Field Configuration, find the class, and select the Layout tab. Drag and drop the order of the fields, then publish.**
- B. Fields are presented in alphabetical order of the field label.
- C. Navigate to the UI where the class is presented, select Customize in the banner, edit, and drag and drop fields, then publish.
- **D. Select Field Configuration and under the Advanced tab set the Sequence property, then publish.**

Answer: A,D

Explanation:

Custom Contract Workspace field order can be controlled through two methods:

* Using the Layout tab in Field Configuration, where fields can be dragged and dropped to reorder them visually, followed by publishing the changes.

* Using the Sequence property under the Advanced tab, assigning numeric values that define the sort order, with lower numbers appearing first. Option B is incorrect because UI banner customization does not manage field order in Contract Workspace screens. Option C is incorrect; field order is controlled by explicit settings, not alphabetical label order.

NEW QUESTION # 27

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field changes value, your custom field does not change. What scenarios could cause this? (Select 3 correct answers)

- **A. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled**
- B. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- **C. Your dependent field does not have the property Refresh screen on value change enabled**

- D. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field
- E. The defaulting Expression sets a value that violates the custom field Validity Condition

Answer: A,C,D

Explanation:

- * B: If the dependent field isn't configured to refresh the UI when its value changes (no "Refresh screen on value change" enabled), the defaulting logic won't retrigger.
- * C: The global parameter Application.Base.RecomputeValueOnFieldChange must be enabled so that dependent default expressions recalculate on field changes; otherwise, they won't update automatically.
- * E: The "Respect User Value" property, when enabled, means that if a user manually overrides the default, the system will not recalculate or overwrite the field even if dependencies change. Lock Initial Value (A) prevents edits after first default but doesn't affect recomputation, and violating validity (D) would trigger an error, not silently block updates.

NEW QUESTION # 28

.....

If you are still unsure whether to pursue ValidBraindumps SAP C-ACDET-2506 exam questions for C-ACDET-2506 certification exam preparation, you are losing the game at the first stage in a fiercely competitive marketplace. ValidBraindumps SAP C-ACDET-2506 Questions are the best option for becoming C-ACDET-2506 certified.
