Employers value this certification because it shows that a professional is committed to continuous learning and development, and has the ability to deliver high-quality solutions that meet business needs.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q243-Q248):

NEW QUESTION # 243

An Enterprise is using a Lightweight Directory Access Protocol (LDAP) server as the only point for user authentication with a username/password. Salesforce delegated authentication is configured to integrate Salesforce under single sign-on (SSO). How can end users change their password?

- A. Users can click on the "Forgot your Password" link on the Salesforce.com login page.
- B. Users can change it on the enterprise LDAP authentication portal.
- C. Users once logged in, can go to the Change Password screen in Salesforce.
- **D. Users can request the Salesforce Admin to reset their password.**

Answer: D

Explanation:

Users can request the Salesforce Admin to reset their password if they are using delegated authentication with LDAP. The other options are not applicable for this scenario, as the password is managed by the LDAP server, not by Salesforce. References: Delegated Authentication, FAQs for Delegated Authentication

NEW QUESTION # 244

Universal Containers (UC) uses a legacy Employee portal for their employees to collaborate and post their ideas. UC decides to use Salesforce Ideas for voting and better tracking purposes. To avoid provisioning users on Salesforce, UC decides to push ideas posted on the Employee portal to Salesforce through API. UC decides to use an API user using OAuth Username - password flow for the connection. How can the connection to Salesforce be restricted only to the employee portal server?

- A. Use a digital certificate signed by the employee portal Server.
- **B. Add the Employee portal's IP address to the Trusted IP range for the connected App**
- C. Use a dedicated profile for the user the Employee portal uses.
- D. Add the employee portal's IP address to the login IP range on the user profile.

Answer: B

Explanation:

Adding the employee portal's IP address to the trusted IP range for the connected app is the best way to restrict the connection to Salesforce only to the employee portal server. This will ensure that only requests from the specified IP range will be accepted by Salesforce for that connected app. Option B is not a good choice because using a digital certificate signed by the employee portal server may not be supported by Salesforce for OAuth username-password flow. Option C is not a good choice because adding the employee portal's IP address to the login IP range on the user profile may not be sufficient, as it will still allow other users with the same profile to log in from that IP range. Option D is not a good choice because using a dedicated profile for the user that the employee portal uses may not be effective, as it will still allow other users with that profile to log in from any IP address. References: [Connected Apps], [OAuth 2.0 Username- Password Flow]

NEW QUESTION # 245

Universal Containers has multiple Salesforce instances where users receive emails from different instances.

Users should be logged into the correct Salesforce instance authenticated by their IdP when clicking on an email link to a Salesforce record.

What should be enabled in Salesforce as a prerequisite?

- **A. My Domain**
- B. External Identity
- C. Multi-Factor Authentication

- D. Identity Provider

Answer: A

NEW QUESTION # 246

Universal Containers (UC) is successfully using Delegated Authentication for their Salesforce users. The service supporting Delegated Authentication is written in Java. UC has a new CIO that is requiring all company Web services be RESTful and written in .NET. Which two considerations should the UC Architect provide to the new CIO? Choose 2 answers

- A. Delegated Authentication will continue to work with a .NET service.
- B. Delegated Authentication will continue to work with REST services.
- C. Delegated Authentication will not work with REST services.
- D. Delegated Authentication will not work with a .NET service.

Answer: A,C

NEW QUESTION # 247

Universal Containers (UC) has decided to replace the homegrown customer portal with Salesforce Experience Cloud. UC will continue to use its third-party single sign-on (SSO) solution that stores all of its customer and partner credentials.

The first time a customer logs in to the Experience Cloud site through SSO, a user record needs to be created automatically.

Which solution should an identity architect recommend in order to automatically provision users in Salesforce upon login?

- A. Custom middleware and web services
- B. Just-in-Time (JIT) provisioning
- C. Third-party AppExchange solution
- D. Custom login flow and Apex handler

Answer: B

Explanation:

Just-in-Time (JIT) provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider. This eliminates the need for manual or batch user provisioning in Salesforce. References: Just-in-Time Provisioning for SAML and OpenID Connect, Identity 101: Design Patterns for Access Management

NEW QUESTION # 248

.....

We want to provide our customers with different versions of Identity-and-Access-Management-Architect test guides to suit their needs in order to learn more efficiently.
