Terraform-Associate-004 Formal Test - Valid Best Terraform-Associate-004 Preparation Materials and Updated HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Valid Dumps

We update our HashiCorp Terraform-Associate-004 exam dumps over time and mark the changes online. Enroll in the HashiCorp Terraform-Associate-004 exam dumps and start your preparation with HashiCorp Terraform-Associate-004 practice questions. We will provide you with the information covered in the current test and incorporate materials that originate from HashiCorp Terraform-Associate-004 Exam Dumps. You will get a handful of knowledge about topics that will benefit your professional career.

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q149-Q154):

NEW QUESTION # 149

You want to use API tokens and other secrets within your team's Terraform workspaces. Where does HashiCorp recommend you store these sensitive values? (Pick 3)

- A. In a terraform.tfvars file, securely managed and shared with your team.
- B. In a plaintext document on a shared drive.
- C. In an HCP Terraform/Terraform Cloud variable, with the sensitive option checked.
- D. In a terraform.tfvars file, checked into version control.
- E. In HashiCorp Vault.

Answer: A,C,E

Explanation:

Rationale for Correct Answers:

C). terraform.tfvars securely managed: Acceptable if distributed securely outside version control.

D). HCP Terraform/Terraform Cloud sensitive variables: Official best practice for team-based workflows.

E). Vault: HashiCorp Vault is designed for secret management and integrates well with Terraform.

Analysis of Incorrect Options:

A): Storing plaintext secrets on shared drives is insecure.

B): Checking secrets into version control is a major security risk.

Key Concept:

Sensitive values should be managed securely in Vault, HCP Terraform, or securely shared .tfvars files - never in plaintext or version control.

Reference:Terraform Exam Objective - Use Terraform to Manage Infrastructure.

NEW QUESTION # 150

Which of the following should you add in the required_providers block to define a provider version constraint?

- A. version = "3.1"
- B. version: 3.1
- C. version - 3.1
- D. version

Answer: A

Explanation:

Rationale for Correct Answer (B):

Provider version constraints in Terraform are specified using the version argument in the required_providers block, e.g.:

```
terraform {
  required_providers {
    aws = {
      source = "hashicorp/aws"
      version = "3.1"
    }
  }
}
```

This ensures Terraform always uses a specific provider version (or constraint expression).

Analysis of Incorrect Options:

A). version: Incomplete, no value specified.

C). version: 3.1: Incorrect syntax, Terraform uses = not .:

D). version - 3.1: Incorrect syntax, - is invalid here.

Key Concept:

Defining provider version constraints ensures consistent provider behavior across environments and avoids breaking changes.

Reference:Terraform Exam Objective - Manage Terraform Resources and Providers.

NEW QUESTION # 151

You have to initialize a Terraform backend before it can be configured.

- A. False
- B. True

Answer: A

Explanation:

You can configure a backend in your Terraform code before initializing it. Initializing a backend will store the state file remotely and enable features like locking and workspaces. References = [Terraform Backends]

NEW QUESTION # 152

Which of the following module source paths does not specify a remote module?

- A. Source = "git@github.com:hasicrop/example.git"
- B. Source = "hasicrop/consul/aws"
- C. Source = "module/consul"
- D. Source = "github.com:hasicrop/example"

Answer: C

Explanation:

The module source path that does not specify a remote module is source = "module/consul". This specifies a local module, which is a module that is stored in a subdirectory of the current working directory. The other options are all examples of remote modules, which are modules that are stored outside of the current working directory and can be accessed by various protocols, such as Git, HTTP, or the Terraform Registry. Remote modules are useful for sharing and reusing code across different configurations and environments. References = [Module Sources], [Local Paths], [Terraform Registry], [Generic Git Repository], [GitHub]

NEW QUESTION # 153

When does Terraform create the .terraform.lock.hcl file?

- A. When you enable state locking
- B. After your first terraform plan
- C. After your first terraform apply
- D. After your first terraform init

Answer: D

Explanation:

Terraform creates the .terraform.lock.hcl file after the first terraform init command. This lock file ensures that the dependencies for your project are consistent across different runs by locking the versions of the providers and modules used.

NEW QUESTION # 154

.....

As a IT worker sometime you may know you will take advantage of new technology more quickly by farming out computer operations, we prefer to strengthen own strong points. Our Terraform-Associate-004 test braindump materials is popular based on that too. As we all know the passing rate for IT exams is low, the wise choice for candidates will select valid Terraform-Associate-004 test braindump materials to make you pass exam surely and fast. Professional handles professional affairs.
