## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q27-Q32):

### NEW QUESTION # 27

The administrator has checked the logs to see the below output:

The API call sent to the VM via XD Plugin at [CDF logs]:

Following that while the VM is being powered OFF, query for the current VM state results in ON (the administrator sees a number of these until the VM is marked as power OFF) logs]:

Upon further review the administrator notices in COF logs, after a number of queries for the machine state, one results in a conflicting state, reporting the Power state as ON and OFF [CDF logs] HCM should the administrator resolve the issue?

- A. Decrease the distribution time in Machine Update Rollout
- **B. Create a Scheduled reboot cycle.**
- C. Delete Scheduled reboot settings
- D. Increase the distribution time in Machine Update Rollout

**Answer: B**

### NEW QUESTION # 28

What code is installed on virtual desktops and enables direct FlexCast Management Architecture (FMA) connections between the virtual desktop and user devices?

- **A. Virtual Delivery Agent (VDA)**
- B. Nutanix Guest Tools (NGT)
- C. VirtIO Device Drivers
- D. Citrix Workspace app

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Citrix Virtual Apps and Desktops architecture documentation utilized in Nutanix EUC designs:

\* **VDA Functionality:** The Virtual Delivery Agent (VDA) is the essential software component that must be installed on every machine (virtual or physical) that delivers applications or desktops.

\* **FMA Role:** The VDA registers with the Delivery Controller (Broker) and manages the FMA (FlexCast Management Architecture) connection between the machine and the user device. It establishes and manages the HDX connection, allowing the Citrix Workspace app (on the client side) to connect directly to the desktop session.

\* **Distinction:**

\* Citrix Workspace app is installed on the client device (endpoint), not the virtual desktop.

\* VirtIO drivers are lower-level drivers for disk/network I/O virtualization on AHV, not FMA connection brokers.

\* NGT provides Nutanix-specific fabric features (SSR, FLR), not Citrix session connectivity.

### NEW QUESTION # 29

An administrator has finished setting up a Frame environment and has to finish preparing the Sandbox image. During the publishing and testing phase, the administrator notices issue with the Sysprep process.

Which tool can the administrator use to prepare the Sysprep of the sandbox with error parsing?

- **A. Frame Sysprep Helper Tool**
- B. Windows Sysprep Built in tool
- C. Frame Guest Agent 7
- D. Frame Guest Agent 8

**Answer: A**

Explanation:

Sysprep is a Microsoft tool that prepares a Windows installation for cloning, auditing, and customer delivery<sup>23</sup>. The Frame Sysprep Helper Tool is designed to simplify the Microsoft Sysprep process by parsing errors reported by sysprep and immediately repairing them when possible<sup>1</sup>. Therefore, the tool that the administrator can use to prepare the Sysprep of the sandbox with error parsing is A (Frame Sysprep Helper Tool).

### NEW QUESTION # 30

An administrator has been evaluating a performance issue with the current Citrix VD' solution on Nutanix. During the evaluation, the administrator finds out there is a feature that is enabled called Shadow Clones. What would happen if an administrator disabled Shadow Clones within a company's VDI environment?

- A. Boot storms would be eliminated because the number of desktops would be throttled.
- **B. Deployment times would increase as the number deployed desktops increase,**
- C. Deployment times would decrease when deploying additional desktops.
- D. Boot storms would be eliminated due to desktop resource contention.

#### Answer: B

Explanation:

Nutanix's Shadow Clones feature is used to create linked clones or snapshots of base VMs, which can improve VM provisioning time and storage efficiency by reducing the amount of duplicated data.

If an administrator disables Shadow Clones within a company's VDI environment, it is likely that deployment times would increase as the number of deployed desktops increases. This is because linked clones or snapshots would no longer be used, so each new desktop deployment would require creating a full copy of the base VM.

Nutanix Shadow Clones allow for distributed caching of a particular disk or VM data, which are in a 'multi-reader' scenario. This can help in scenarios such as VDI or private clone boot storms, where VMs on multiple nodes read from the same set of base disks12

### NEW QUESTION # 31

An administrator is creating a plan for Citrix DaaS disaster recovery on either Amazon Web Services or Azure.

At a minimum, how many Cloud Connectors in each resource location must be created?

- A. 0
- B. 1
- **C. 2**
- D. 3

#### Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix and Citrix DaaS documents:

According to Citrix Cloud and Nutanix DR best practices:

\* High Availability Requirement: Citrix strongly recommends and practically enforces a requirement of at least two (2) Cloud Connectors per Resource Location (RL).

\* Reasoning: Cloud Connectors are "evergreen" components that update automatically from the cloud.

During an update, a connector may reboot. If only one connector exists (Option A), the Resource Location would go offline, severing connectivity for the DR site.

\* Production vs. DR: A Disaster Recovery (DR) site is treated as a production Resource Location because it must be ready to accept user connections instantly during a failover. Therefore, the minimum N+1 redundancy rule applies, requiring 2 connectors.
