CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q117-Q122):

NEW QUESTION # 117

Which of the following is used to initially create trust between a Gateway and Security Management Server?

- A. One-time Password
- B. Internal Certificate Authority
- C. Token
- D. Certificate

Answer: A

Explanation:

A one-time password is used to initially create trust between a Gateway and Security Management Server. The administrator generates a one-time password from SmartConsole and enters it on the gateway command line interface using the `cpconfig` command. This establishes a Secure Internal Communication (SIC) between the gateway and the server. The other options are not used for this purpose. [Configuring Secure Internal Communication (SIC)], [Check Point CCSA - R81: Practice Test & Explanation]

NEW QUESTION # 118

Traffic from source 192.168.1.1 is going to `www.google.com`. The Application Control Blade on the gateway is inspecting the traffic. Assuming acceleration is enable which path is handling the traffic?

- A. Fast Path
- B. Medium Path
- C. Accelerated Path
- D. Slow Path

Answer: D

Explanation:

The correct answer is A because the traffic from source 192.168.1.1 to `www.google.com` is handled by the Slow Path if the Application Control Blade on the gateway is inspecting the traffic². The Slw Path is used when traffic requires inspection by one or more Software Blades². The oter paths are used for different scenarios². Check Point R81 Performance Tuning Administration Guide

NEW QUESTION # 119

If the Active Security Management Server fails or if it becomes necessary to change the Active to Standby, the following steps must be taken to prevent data loss. Providing the Active Security Management Server is responsible, which of these steps should NOT be performed:

- A. Change the Standby Security Management Server to Active.
- B. Rename the hostname of the Standby member to match exactly the hostname of the Active member.
- C. Change the Active Security Management Server to Standby.
- D. Manually synchronize the Active and Standby Security Management Servers.

Answer: B

Explanation:

The correct answer is A because renaming the hostname of the Standby member to match exactly the hostname of the Active member is not a recommended step to prevent data loss. The hostname of the Standby member should be different from the hostname of the Active member¹. The other steps are necessary to ensure a smooth failover and synchronization between the Active and Standby Security Management Servers². NEW QUESTION # 120

What is true about the IPS-Blade?

- A. in R80, in the IPS Layer, the only three possible actions are Basic, Optimized and Strict
- B. in R80, the GeoPolicy Exceptions and the Threat Prevention Exceptions are the same
- **C. in R80, IPS is managed by the Threat Prevention Policy**
- D. in R80, IPS Exceptions cannot be attached to "all rules"

Answer: C

Explanation:

In R80, IPS is managed by the Threat Prevention Policy⁵⁶⁷. The Threat Prevention Policy defines how to protect the network from malicious traffic using IPS, Anti-Bot, Anti-Virus, and Threat Emulation software blades⁵. The IPS layer in the Threat Prevention Policy allows configuring IPS protections and actions for different network segments⁵. The other options are not true about the IPS-Blade. Check Point IPS Datasheet, Check Point IPS Software Blade, Quantum Intrusion Prevention System (IPS)

NEW QUESTION # 121

Fill in the blank: An identity server uses a _____ for user authentication.

- **A. Shared secret**
- B. Token
- C. One-time password
- D. Certificate

Answer: A

Explanation:

The answer is A because an identity server uses a shared secret for user authentication. A shared secret is a passphrase that is known by both the identity server and the user. The identity server sends a challenge to the user, who encrypts it with the shared secret and sends it back. The identity server then verifies the response and authenticates the user¹².
