## Question 1

You need to create a new functional location. Which actions can you perform with the SAP Fiori app "Create Technical Object"? Note: There are 3 correct answers to this question.

- A. Edit classification data and characteristics.
- B. Create a task list for functional location.
- C. Assign documents.
- D. Change a reference location.
- E. Assign a subordinate piece of equipment.

Answer A C D

## Question 2

You want to schedule a performance-based maintenance plan. Which parameters are mandatory? Note: There are 2 correct answers to this question.

- A. Scheduling period
- B. Start counter reading
- C. Estimated annual performance
- D. Counter overflow reading

Answer B C

## Question 3

You settle a refurbishment order with the batches (valuation types) having price control standard price. What is the effect? Note: There are 2 correct answers to this question.

- A. The effective costs are posted as a credit memo to a price difference account.
- B. The effective costs are posted to the respective batch (valuation type).
- C. The goods receipt for the batch refurbished is posted with the value of the standard price.
- D. The goods receipt for the batch refurbished is posted with the value of the moving average price.

Answer A C

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) study questions provide free trial service for consumers. If you are interested in C-S43-2601 exam material, you only need to enter our official website, and you can immediately download and experience our trial PDF file for free. Through the trial you will have different learning experience, you will find that what we say is not a lie, and you will immediately fall in love with our products. As a key to the success of your life, the benefits that C-S43-2601 Exam Guide can bring you are not measured by money. C-S43-2601 exam guide can not only help you pass the exam, but also help you master a new set of learning methods and teach you how to study efficiently, C-S43-2601 exam material will lead you to success.

Yet at any moment, competition is everywhere so you may be out of work or be challenged by others at any time. This exam can improve your professional capacity with great chance if you choose our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) exam questions. We all know both exercises and skills are important to pass the exam while our C-S43-2601 Torrent prep contain the both aspects well.

>> C-S43-2601 Free Learning Cram <<

## Quiz 2026 SAP Efficient C-S43-2601: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Free Learning Cram

At the moment you come into contact with C-S43-2601 learning guide you can enjoy our excellent service. You can ask our staff

about what you want to know, then you can choose to buy. If you use the C-S43-2601 study materials, and have problems you cannot solve, feel free to contact us at any time. Our staff is online 24 hours to help you on our C-S43-2601 simulating exam. When you use C-S43-2601 learning guide, we hope that you can feel humanistic care while acquiring knowledge. Every staff at C-S43-2601 simulating exam stands with you.

## **SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q10-Q15):**

### **NEW QUESTION # 10**

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Create a Maintenance Work Center
- \* Create a capacity demand for a Maintenance Work Center
- \* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
  - Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

### **Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- \* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- \* maintain the required capacity values
- \* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□

Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities

- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5

- \* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Step 4: Maintain basic data

On the work center master screen:

- \* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- \* No. Ind. Capacities = 5

- \* Capacity Base Unit = H

- \* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- \* Start Time = 08:00:00

- \* End Time = 17:00:00

- \* Length of breaks = 01:00:00

- \* Capacity Utilization = 60

- \* No. Ind. Capacities = 5

This produced:

- \* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- \* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- \* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- \* create a capacity demand of 1 hour

- \* for the newly created maintenance work center ZZ-ME42

- \* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- \* In the command field, enter /nIW31

- \* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

- \* Order Type = PM01

- \* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

- \* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- \* Operation = 0010

- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* Control Key = PM01
- \* Work Duration / Work = 1
- \* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

- \* Click Save

SAP displayed the confirmation message:

- \* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

- \* Maintenance Work Center created
- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* confirmed by SAP message that the work center already existed when rechecked
- \* Capacity maintained correctly
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H
- \* Capacity demand created
- \* maintenance order type PM01
- \* operation assigned to ZZ-ME42
- \* planned work = 1 H
- \* Order successfully saved
- \* SAP confirmation: Order saved with number 4000314

## NEW QUESTION # 11

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

## Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

### Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

- \* Transaction : Enter IP02 (Change Maintenance Plan).
- \* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .
- \* Scheduling Parameters Tab :
- \* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.
- \* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.
- \* Save your changes.

### Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

- \* Transaction : Enter IP10 (Schedule Maintenance Plan).
- \* Maintenance Plan : Enter your plan number and press Enter .
- \* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start ).
- \* Enter the "Start Date" / "Completion Date" :
- \* The Rule : You must use Today's date minus 4 weeks .
- \* Example: If today is April 19, enter March 22.
- \* Press Enter . The system will calculate the next calls.
- \* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.
- \* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

### Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

- \* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).
- \* Check the following three items :
- \* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).
- \* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.
- \* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

## NEW QUESTION # 12

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Maintenance Order with Checklist
- \* Display a Maintenance Order with automatically generated Object List and Checklist.
- \* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

- \* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

#### Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- \* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
- \* Initial Screen :
- \* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
- \* Press Enter .
- \* Enter Header and Location Data :
- \* Functional Location : Enter 48-01-PRD-01-03-HD .
- \* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
- \* Assign the Task List :

- \* Go to the Operations tab or find the task list assignment section.
- \* General Maintenance Task List : Enter A / T-PMCLEN / 1 .
- \* Press Enter to validate.
- \* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- \* Display the Order : Use transaction code IW33 and enter the order number you just created.
- \* Verify the Object List :
- \* Navigate to the Object List tab.
- \* You should see the equipment or functional location listed here with a link to the checklist.
- \* Verify the Checklist :
- \* Look for a button or tab labeled Checklists or Inspection Lot within the order.
- \* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

### NEW QUESTION # 13

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- \* Display the automatically created Inspection Lot
- \* Record Inspection Results
- \* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
  - \* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- \* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- \* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- \* Verify the Following Data :
- \* Material : T-PM1100
- \* Plant : 1010
- \* Inspection Lot Origin : 89 (Miscellaneous)
- \* Group : CL-DE-00
- \* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- \* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- \* Select the Lot : Enter your inspection lot number and click Execute .
- \* Record Results :
- \* Enter the inspection values for each characteristic listed in the checklist.
- \* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- \* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .

\* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

#### NEW QUESTION # 14

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

\* Initiate and screen a Maintenance Notification

\* Plan Maintenance Order and send it for approval

\* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

\* Screen and accept the just created Maintenance Notification.

\* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

#### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

\* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .

\* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).

\* Enter the Following Data :

\* Technical Object : T-PB48

\* Description : Defective pump (phase-based)

\* Current Location : Production Line 1

\* Detection Method : Continuous Condition Monitoring

\* Operational Effect : Production restricted

\* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

\* Access the Fiori App : Open Screen Maintenance Requests .

\* Locate Your Notification : Find the notification you just created for T-PB48.

\* Perform Screening :

\* Review the details to ensure they are complete.

\* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

\* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .

\* Enter Planning Data :

\* Technical Object : T-PB48

\* Operation 0010 Description : Repair damage

\* Operation 0010 Work : 2 h

\* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

## NEW QUESTION # 15

.....

In addition, you can print these SAP C-S43-2601 PDF questions for paper study in this format of ExamTorrent product frees you from restrictions of time and place as you can study C-S43-2601 exam questions from your comfort zone in your spare time. The second version is the web-based format of the SAP C-S43-2601 Practice Test. Browsers such as Internet Explorer, Microsoft Edge, Firefox, Safari, and Chrome support the web-based practice exam.

**C-S43-2601 Sample Questions Pdf:** <https://www.examtorent.com/C-S43-2601-valid-vce-dumps.html>

But, it is not easy to pass C-S43-2601 certification exams, SAP C-S43-2601 Free Learning Cram We do not force you to buy our product by trusting us blindly, You may be also one of them, you may still struggling to find a high quality and high pass rate C-S43-2601 Sample Questions Pdf - SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) study question to prepare for your exam, The SAP C-S43-2601 exam practice test questions have already helped many SAP C-S43-2601 exam candidates in their preparation and success.

Besides, we guarantee you 100% pass for C-S43-2601 actual test, in case of failure, you can ask for full refund, The computer keyboard is very limited in the characters it can Latest C-S43-2601 Practice Materials produce, and people often need other characters to produce typeset-quality documents.

## 100% Pass SAP - Useful C-S43-2601 Free Learning Cram

But, it is not easy to pass C-S43-2601 Certification exams, We do not force you to buy our product by trusting us blindly, You may be also one of them, you may still struggling to find C-S43-2601 a high quality and high pass rate SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) study question to prepare for your exam.

The SAP C-S43-2601 exam practice test questions have already helped many SAP C-S43-2601 exam candidates in their preparation and success, We shall do our best to live up to your choice and expectation.
