PMI CPMAI_v7 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Domain VI Trustworthy AI: This section is designed for the Project Manager and focuses on ethical, responsible, and transparent AI development. It covers building trustworthy systems, dispelling misconceptions, evaluating real-world ethical concerns, defining responsible frameworks, and implementing mitigation tactics for unintended harms. It addresses data privacy, GDPR compliance, protection of PII, anonymization techniques, security against adversarial threats, and monitoring.
Topic 2	<ul style="list-style-type: none"> Data for AI: This domain targets the Data AI Lead and explores the central role of data in AI deployments, including Big Data concepts and unstructured data utility. It defines data governance strategies such as steering, stewardship, lifecycle mapping, lineage tracking, and master data practices.
Topic 3	<ul style="list-style-type: none"> AI Fundamentals: This section measures the abilities of a Project Manager and explores foundational AI concepts, including its definition, links to human cognition, and differences across AGI, Strong, Weak, and Narrow AI. It includes understanding the Turing Test and cognitive computing, dispelling myths, and applying augmented intelligence in business contexts. The historical progression of AI, such as AI winters, symbolic logic, expert systems, and fuzzy logic, is examined along with reasons for AI's current prominence and its role in digital transformation. The section continues to assess the identification of suitable AI use cases, understanding limitations, and adoption patterns like conversational AI, speech processing, anomaly detection, RPA, goal-driven systems, and integrated AI solutions.
Topic 4	<ul style="list-style-type: none"> Managing AI: This section is for the Project Manager and involves assessing model performance through quality assurance practices, validation techniques, overfitting and underfitting strategies, alignment with KPIs, and iterative refinements. It additionally covers the deployment of AI from training to inference, operationalization in production environments, on-premise or cloud resource selection, data lifecycle management, version control, and the choice of appropriate machine learning services.

PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

You are being tasked to manage an AI project at your company and you need to identify which project to start with. What's the best way to approach this?

- A. Go through all possible scenarios to come up with the perfect first project.
- B. Find a project that requires 100% accuracy in the results and start with that one.
- **C. Ask key stakeholders from your group and find a small problem that would have a big return on investment and start there.**
- D. Ask key stakeholders from all groups for input about their pain points.

Answer: C

Explanation:

In Phase I: Business Understanding, CPMAI directs teams to "determine business objectives" by engaging stakeholders to surface specific pain points, estimate time-to-ROI, and prioritize projects that deliver tangible business value quickly. Focusing on a narrowly scoped problem with high ROI ensures early success, builds momentum, and validates the AI methodology before tackling larger or more complex initiatives.

NEW QUESTION # 69

Your team is working on a new facial recognition application. Since this technology has the potential to be mis-used you think it's important to set guidelines for the proper use of this application and you want to make sure the AI system is built for some positive purpose. What area of Trustworthy AI does this best fall under?

- A. Governed AI
- B. Transparent AI
- **C. Responsible AI**
- D. Explainable AI

Answer: C

Explanation:

Under Domain VI: Trustworthy AI in the CPMAI Exam Content Outline, Responsible AI covers establishing policies, guidelines, and governance that ensure AI solutions are developed for positive, ethical use and prevent misuse. Defining proper-use guidelines and embedding ethical intent into facial recognition directly align with Responsible AI practices .

NEW QUESTION # 70

You are working with a dataset that has a high number of dimensions. You're running into issues because some dimensions don't have enough real examples to properly train the systems for predictable results. What' s your best course of action?

- A. Try to improve the quality of your data through more preparation
- B. Try to get additional information from project lead to see how many examples per dimension are needed
- **C. Try to get additional data - at least 5 training examples for each dimension in the representation**
- D. Keep going as planned and the problem will eventually correct itself

Answer: C

Explanation:

CPMAI's Phase II: Data Understanding includes verifying that you have sufficient data volume for each feature to support reliable

model training. The learning curve concept underscores that model performance improves with additional training examples. When dimensions are under-represented, the team must source or generate more data-aiming for a minimum number of examples per feature-to avoid underfitting and ensure stable predictions.

NEW QUESTION # 71

You just joined a new company and they want to start their first AI project. Senior management thinks the best approach is to just buy AI from a vendor. You know that AI is something you do, not something you buy.

What is your next best course of action to address this?

- A. Help senior management do research on AI vendors
- B. Share prior experiences with how your last team addressed this problem and their data quality issues
- C. Say nothing and let the team figure it out for themselves
- D. Share prior experiences with how your last team addressed this problem and how you solved it

Answer: D

Explanation:

CPMAI's Differentiate AI Project Management Approaches task stresses that effective AI adoption requires building internal capabilities and understanding domain-specific challenges. By sharing your own team's past experiences-how you diagnosed the problem, structured the data, and developed AI solutions-you guide leadership toward establishing a homegrown, iterative AI practice rather than simply purchasing a black-box product .

NEW QUESTION # 72

During CPMAI Phase IV: Model Development, which of the following is not done during this phase?

- A. Model training
- B. Model tuning
- C. Algorithm Selection
- D. Model Selection

Answer: D

Explanation:

The Phase IV: Model Development generic tasks include:

Select Modeling Technique (algorithm selection)

Generate model test design

Model Training / Model Building

Hyperparameter Optimization (model tuning)

Final Model Selection (choosing the best candidate against business criteria) is performed in Phase V: Model Evaluation, not in Phase IV .
