

# Latest EAEP2201 Actual Exams—First-Grade Latest Questions for EAEP2201: Enterprise Administration Professional 2201

What's more, part of that Actual4dump EAEP2201 dumps now are free: <https://drive.google.com/open?id=1oO9MaTkEeWLF3kIxMQSBk6vgPamC8X>

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - EAEP2201 test answers, which are tailor-made for students who want to obtain EAEP2201 certificates. Our customer service is available 24 hours a day. You can contact us by email or online at any time. In addition, all customer information for purchasing EAEP2201 Test Torrent will be kept strictly confidential. We will not disclose your privacy to any third party, nor will it be used for profit. Then, we will introduce our products in detail.

You will have prior experience in answering questions with adjustable time. With these features, you will improve your Enterprise Administration Professional 2201 EAEP2201 exam confidence and time management skills. Many candidates prefer to prepare for the Enterprise Administration Professional 2201 EAEP2201 Exam Dumps using different formats. The Enterprise Administration Professional 2201 EAEP2201 exam questions were designed in different formats so that every candidate could select what suited them best.

## Realistic EAEP2201 Actual Exams, EAEP2201 Latest Questions

The PDF file of EAEP2201 real exam questions is easy to use on laptops, tablets, and smartphones. We have added all the Esri EAEP2201 questions, which have a chance to appear in the Esri EAEP2201 real test. Our Enterprise Administration Professional 2201 (EAEP2201) dumps PDF exam questions are beneficial to prepare for the test in less time.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q25-

## Q30):

### NEW QUESTION # 25

A client requires an ArcGIS Server site with the ability to:

- \* Serve cached image services updated annually
  - \* Serve dynamic feature services from a PostgreSQL enterprise geodatabase
- Which ArcGIS Server license role is required?

- A. GeoAnalytics Server
- B. Mission Server
- **C. Image Server**
- D. GIS Server

**Answer: C**

Explanation:

To publish and serve cached image services, the ArcGIS Server must be licensed as an Image Server. This licensing role is designed specifically for serving raster datasets, image services, and cache-based imagery workflows.

From ArcGIS Server documentation:

"The Image Server role is required to publish and manage image services, including those that serve pre-generated tile caches and support raster analytics."

\* Option A (GIS Server) supports feature and map services, but not cached imagery.

\* Option C (Mission Server) is for real-time operations, unrelated to imagery or features.

Reference: ArcGIS Enterprise - Server Roles and Functionality (Image Server)

### NEW QUESTION # 26

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Use service defaults for publishing
- B. Adjust pooling to handle the request
- **C. Increase the max record count**
- D. Enable cached drawing mode

**Answer: C**

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000). To allow all 2,400 features to be returned in one call, the administrator needs to increase the

"Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

\* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

\* Option C would keep the default setting of 1,000, which would not meet the requirement.

\* Option D relates to visual performance, not record retrieval.

Reference: ArcGIS Server - Feature Service Settings and Tuning for Performance

### NEW QUESTION # 27

A GIS administrator installs and configures an ArcGIS GeoAnalytics Server machine with four cores and 16 GB of RAM. Users experience a slowdown when analyzing large datasets.

Which action should the administrator perform?

- A. Set the GeoAnalytics Server as the hosting server
- B. Add two cores to the GeoAnalytics Server machine
- **C. Add 16 GB of RAM to the GeoAnalytics Server machine**

**Answer: C**

Explanation:

ArcGIS GeoAnalytics Server is designed to perform distributed analysis on large volumes of spatial and temporal data. To efficiently process large datasets, it is recommended that each machine in the GeoAnalytics Server site has at least 16 GB of RAM and 4 CPU cores. However, for optimal performance, especially when handling very large datasets, increasing the available RAM can significantly improve processing times.

In this scenario, the machine already has 16 GB of RAM and 4 cores. Adding more RAM would allow the GeoAnalytics Server to allocate more memory per job, enhancing its ability to process large datasets efficiently. Therefore, the recommended action is to add 16 GB of RAM to the GeoAnalytics Server machine.

Reference Source: ArcGIS Enterprise documentation on GeoAnalytics Server system requirements and performance optimization.

### NEW QUESTION # 28

An organization wants to use the standard feature analysis tools available in ArcGIS Enterprise to create hosted feature layers for planning and design.

Which data store is required for this work?

- **A. Relational data store**
- B. File-based geodatabase
- C. Spatiotemporal big data store
- D. Tile cache data store

**Answer: A**

Explanation:

The standard feature analysis tools in ArcGIS Enterprise (e.g., buffer, overlay, aggregate points) require hosted feature layers, which depend on the relational data store (a component of ArcGIS Data Store). The relational data store is the default location for hosting feature layers.

From ArcGIS Enterprise documentation:

"To use the standard spatial analysis tools and create hosted feature layers, the ArcGIS Data Store (relational) must be configured and set as the default hosting location."

\* Option A (spatiotemporal big data store) is used for real-time and big data feeds, not standard analysis.

\* Option C supports cached tiles, not feature layers.

Reference: ArcGIS Enterprise - Configuring the Relational Data Store for Hosting Feature Layers

### NEW QUESTION # 29

An organization is considering deploying ArcGIS Enterprise. A needs assessment shows that all users need access to the following applications and capabilities:

\* ArcGIS Pro

\* ArcGIS StoryMaps

\* View, edit and create portal content items

Which user type should be assigned for these users?

- A. Creator
- **B. GIS Professional**
- C. Editor

**Answer: B**

Explanation:

To meet the listed requirements, the appropriate user type is GIS Professional. This user type includes:

\* Access to ArcGIS Pro (essential for desktop GIS work and analysis)

\* Full content management and sharing privileges in the portal

\* Use of premium apps like ArcGIS StoryMaps, Experience Builder, and others. The Creator user type provides access to web-based apps and content but does not include ArcGIS Pro without an additional add-on license. The Editor user type is limited to viewing and editing existing data and does not support app creation or use of ArcGIS Pro.
