

# 300-620 Exam Preparation & 300-620 Training Materials & 300-620 Study Guide

BONUS!!! Download part of SureTorrent 300-620 dumps for free: <https://drive.google.com/open?id=1anAVZqleJvsLj8RIFDriWX4EzJsamip>

Can you imagine that you only need to review twenty hours to successfully obtain the 300-620 certification? Can you imagine that you don't have to stay up late to learn and get your boss's favor? With 300-620 study quiz, passing exams is no longer a dream. If you are an office worker, 300-620 Preparation questions can help you make better use of the scattered time to review. Just visit our website and try our 300-620 exam questions, then you will find what you need.

## Cisco 300-620 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>ACI Anywhere: The exam phase focuses on how to describe Multi-Pod and Multi-Site.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Integrations: The topic covers how to implement VMware vCenter DVS integration, explain resolution immediacy in VMM, and deploy a service graph.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>ACI Management: In this section, the focus is on how to implement out-of-band and in-band and use syslog and SNMP services. Moreover, the exam section covers how to deploy configuration backup (snapshot</li> <li>config import-export) and AAA and RBAC.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>External Network Connectivity: In this exam section, the focus is on how to deploy Layer 2 out (STP</li> <li>MCP basics and EPG port bindings) and Layer 3 out (excludes transit routing and VRF route leaking).</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>ACI Packet Forwarding: In this section of the exam, the candidates are tested for explaining endpoint learning and deploying bridge domain configuration knob.</li> </ul>

## Cost-Effective Cisco 300-620 Exam [2026]

In today's era, knowledge is becoming more and more important, and talents are becoming increasingly saturated. In such a tough situation, how can we highlight our advantages? It may be a good way to get the test 300-620 certification. In fact, we always will unconsciously score of high and low to measure a person's level of strength, believe that we have experienced as a child by elders inquire achievement feeling, now, we still need to face the fact. Our society needs all kinds of comprehensive talents, the 300-620 Latest Dumps can give you what you want, but not just some boring book knowledge, but flexible use of combination with the social practice. Therefore, it is necessary for us to pass all kinds of qualification examinations, the 300-620 study practice question can

bring you high quality learning platform

## Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Drag and drop the Cisco ACI filter entry options from the left onto the correct categories on the right indicating what are required or optional parameters.

**Answer:**

Explanation:

### NEW QUESTION # 54

Refer to the exhibit.

Refer to the exhibit. What must be configured in the service graph to redirect HTTP traffic between the EPG client and EPG server to go through the Cisco ASA firewall?

- A. contract filter to allow ARP and HTTP.
- B. contract with no filter
- C. precise filter to allow only HTTP traffic
- D. permit-all contract filter

**Answer: C**

Explanation:

To redirect HTTP traffic between the EPG client and EPG server through the Cisco ASA firewall using a service graph in Cisco ACI, a precise filter must be configured to allow only HTTP traffic. This filter will specify the protocol (HTTP) and the Layer 4 port (typically port 80 for HTTP) to ensure that only HTTP traffic is redirected to the firewall for inspection or processing. The service graph can then be associated with the relevant EPGs to enforce the redirection.

Service Graph Design with Cisco ACI (Updated to Cisco APIC Release 5.2) White Paper

### NEW QUESTION # 55

Refer to the exhibit. Two L3Outs have been created under the same VRF. S1 must communicate only with external IP 128.10.24.32 through R2 and with all other IP addresses through R1. Which subnet must be marked as an external subnet for the external EPG to accomplish these goals?

- A. 128.10.24.32/32 under external EPG of HSS\_LAB  
0.0.0.0/1 under external EPG of CPN\_L3
- B. 128.10.24.32/32 under external EPG of HSS\_LAB  
128.0.0.0/1 under external EPG of CPN\_L3
- C. 128.0.0.0/2 under external EPG of HSS\_LAB  
0.0.0.0/0 under external EPG of CPN\_L3
- D. 128.10.24.32/32 under external EPG of HSS\_LAB  
0.0.0.0/0 under external EPG of CPN\_L3

**Answer: D**

Explanation:

Defining 128.10.24.32/32 on the HSS\_LAB L3Out's external-EPG ensures that only that exact host is learned via R2.

Defining 0.0.0.0/0 on the CPN\_L3 L3Out's external-EPG catches all other prefixes and sends them via R1.

The ACI fabric uses longest-prefix-match, so the /32 route to R2 takes precedence for .32 and the default route handles everything else via R1.

### NEW QUESTION # 56

An ACI engineer is implementing a Layer 3 out inside the Cisco ACI fabric that must meet these requirements:

The data center core switch must be connected to one of the leaf switches with a single 1G link.

The routes must be exchanged using a link-state routing protocol that supports hierarchical network design.

The data center core switch interface must be using 802.1Q tagging, and each vlan will be configured with a dedicated IP address.

Which set of steps accomplishes these goals?

- A. Set up the EIGRP Protocol policy with the selected Autonomous System number. Create the Routed Outside object and Node Profile selecting EIGRP Configure the Interface profile selecting Routed Interface and the appropriate interfaces. Create the External Network object with a network of 0.0.0.0/0.
- B. Set up the BGP Protocol policy with the Autonomous System number of 0. Configure an interface policy and an External Bridged Domain. Create an External Bridged Network using the configured VLAN pool. Build the Leaf profile, selecting Routed sub-interface and the appropriate VLAN.
- C. Set up the EIGRP Protocol policy with the selected Autonomous System number. Set up the Routed External Network object and Node Profile, selecting EIGRP Create the Switch profile, selecting Port-channel and the appropriate interfaces. Create the default network and associate it with the Routed Outside object.
- **D. Configure the OSPF Protocol policy with an area of 0. Create Routed Outside object and Node Profile, selecting OSPF as the routing protocol. Build the Interface profile, selecting Routed Sub-interface and the appropriate VLAN. Configure the External Network object with a network of 0.0.0.0/0.**

**Answer: D**

#### NEW QUESTION # 57

An engineer must limit management access to the Cisco ACI fabric that originates from a single subnet where the NOC operates. Access should be limited to SSH and HTTPS only. Where should the policy be configured on the Cisco APIC to meet the requirements?

- A. ACL on the management interface of the APIC
- B. ACL on the console interface
- C. policy on the management VLAN
- **D. policy in the management tenant**

**Answer: D**

#### NEW QUESTION # 58

.....

We are a certification exam dumps website that meets the needs of many IT workers who are going to participate in the Cisco 300-620 real exam. Our colleagues will always check the updating of 300-620 practice questions and the similarity of real question is almost 100%. It will be not difficult for candidates to clear 300-620 Exam Braindumps if they are good at considering and conclude except practicing 300-620 dumps pdf.
