Most important of all, as long as we have compiled a new version of the CSC2 guide torrent, we will send the latest version of our CSC2 Training Materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated CSC2 guide torrent to the demanding of the ever-renewing exam, which will help you pass the CSC2 exam.

CSI Canadian Securities Course Exam2 Sample Questions (Q20-Q25):

NEW QUESTION # 20

What event would trigger an amendment of the account application while monitoring a portfolio?

- A. The annual client meeting.
- B. When a new market cycle is formed.
- C. When a client's job situation has changed.
- D. When the advisor's views are influenced by a recent news headline.

Answer: C

NEW QUESTION # 21

What type of risk were mortgage-backed securities designed to address?

- A. Interest rate
- B. Rollover
- C. Liquidity
- D. Prepayment

Answer: D

Explanation:

Mortgage-Backed Securities (MBS) are designed to address prepayment risk, which arises when borrowers pay off their mortgages earlier than expected. Prepayments reduce the interest income investors receive and can affect the expected return on the security.

* Why Prepayment Risk is Addressed:

* Prepayment often occurs when interest rates decline, as borrowers refinance their mortgages. This leaves MBS investors reinvesting at lower yields, which impacts returns.

* Structuring MBS helps mitigate prepayment risk through mechanisms like tranches in Collateralized Mortgage Obligations (CMOs).

* Explanation of Options:

* A. Liquidity: Incorrect. MBS provides liquidity to lenders but is not designed to address liquidity risk directly.

* B. Interest Rate: Incorrect. MBS investors are still exposed to interest rate risk as rates impact prepayment behavior.

* C. Rollover: Incorrect. Rollover risk applies to short-term debt securities, not MBS.

* D. Prepayment: Correct. MBS structures are specifically designed to mitigate the impact of prepayments on investors.

References:

* CSC Volume 2, Chapter 23: Risks of structured products, particularly prepayment risks in MBS.

NEW QUESTION # 22

A portfolio manager at an investment firm is analyzing the behavior of stocks in various market conditions.

They believe markets are efficient and that all public and non-public and non-public available information is fully reflected in current process. How should the construct their investment portfolio?

- A. Actively buy and sell stocks in an attempt to beat the stock market's average returns.
- B. Use technical analysis to review all past price movements and trends.
- **C. Create a passive investment portfolio with exchange-traded funds.**
- D. Use both fundamental and technical analysis to add value to the portfolio.

Answer: C

Explanation:

When an investor or portfolio manager adheres to the belief in market efficiency-specifically the strong form of the Efficient Market Hypothesis (EMH)-it implies that all information (public and non-public) is fully reflected in security prices. This belief diminishes the value of active investment strategies, such as fundamental or technical analysis, as these approaches presume the possibility of identifying undervalued or overvalued securities.

As such, the logical approach in this scenario would be to adopt a passive investment strategy. This includes constructing a portfolio of exchange-traded funds (ETFs) or index funds that replicate the performance of a broad market index, such as the S&P/TSX Composite Index. A passive approach aligns with the principle of market efficiency, as it avoids attempts to outperform the market, which are considered futile under the EMH.

NEW QUESTION # 23

What is the likely outcome at the end of a five-year term of a rate-reset preferred share if the issuer does not redeem the shares?

- **A. The shareholder exchanges the rate-reset preferred share for a floating-rate preferred share**
- B. The shareholder exchanges the rate-reset preferred share for a specified number of common shares.
- C. The shareholder exchanges the rate-reset preferred share for an unsecured bond
- D. The shareholder exchanges the rate-reset preferred share for a fixed-rate preferred share.

Answer: A

Explanation:

At the end of the five-year term, if the issuer does not redeem the rate-reset preferred shares, the shareholder can choose to:

* Continue holding the shares at the reset fixed rate.

* Convert them into floating-rate preferred shares with rates tied to a benchmark (e.g., prime or LIBOR).

This conversion offers flexibility to the shareholder based on market conditions.

* A. Exchange for a specified number of common shares: Rate-reset preferred shares do not have this feature.

* B. Exchange for a fixed-rate preferred share: The fixed-rate component is reset, not exchanged.

* C. Exchange for an unsecured bond: This is not a feature of rate-reset preferred shares.

NEW QUESTION # 24

What does a simplified prospectus typically allow a fund company to do?

- A. Replace the financial reporting documents.
- B. Provide up-to-date holding information to the public.
- **C. Quality one or more mutual funds for sale.**
- D. To qualify a real property funds for sale.

Answer: C

Explanation:

A simplified prospectus is a streamlined legal document that allows fund companies to qualify mutual funds for sale under National Instruments 81-101. It provides essential information about a fund's investment objectives, risks, fees, and performance in a concise and accessible format, enabling investors to make informed decisions. This document complements the more detailed financial disclosures and annual reports rather than replacing them.

Simplified prospectuses apply specifically to mutual funds and are not used for real property funds or to provide detailed holding updates.
