

1z0-076 Zertifizierung - 1z0-076 Kostenlos Downloden

Übrigens, Sie können die vollständige Version der Zertpruefung 1z0-076 Prüfungsfragen aus dem Cloud-Speicher herunterladen:
<https://drive.google.com/open?id=1jTJyOSE-fMeISivz5b9QjuETatox4bbf>

Wir versprechen Ihnen nicht nur eine 100%-Pass-Garantie, sondern bieten Ihnen einen einjährigen kostenlosen Update-Service. Wenn Sie unvorsichtigerweise die Oracle 1z0-076 Prüfung nicht bestehen, erstatten wir Ihnen die gesamte Summe zurück. Aber das ist doch niemals passiert. Wir garantieren, dass Sie die Oracle 1z0-076 Prüfung 100% bestehen können. Sie können teilweise im Internet die Oracle 1z0-076 Prüfungsfragen und Antworten von Zertpruefung als Probe umsonst herunterladen.

Oracle 1z0-076 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Thema 2	Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Thema 3	Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Thema 4	Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Thema 6	Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Thema 7	Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Thema 8	Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Thema 9	Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

Thema 10	Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Thema 12	Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Thema 13	Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.

1z0-076 Kostenlos Downloden - 1z0-076 Testfragen

Mit der Hilfe von Zertpruefung brauchen Sie nicht so viel Geld für die Kurse oder viel Zeit und Energie für die Prüfung auszugeben. Sie können ganz einfach die Oracle 1z0-076 (Oracle Database 19c: Data Guard Administration) Prüfung erfolgreich ablegen. Die Software zur Oracle 1z0-076 Zertifizierungsprüfung wird Zertpruefung nach den echten Prüfungen in den letzten Jahren erforscht. Die Fragen und Antworten zur Oracle 1z0-076 Zertifizierungsprüfung von Zertpruefung sind den realen Fragen und Antworten sehr ähnlich.

Oracle Database 19c: Data Guard Administration 1z0-076 Prüfungsfragen mit Lösungen (Q68-Q73):

68. Frage

Which two are true about managing and monitoring Oracle container databases in a Data Guard environment using the broker?

- A. If the primary database is not a container database, then a standby may be a container database.
- B. After a role change, the broker opens all Pluggable databases (pdbb) on the new primary.**
- C. If the primary database is a container database, then a logical standby may be a non-container database.
- D. If the primary database is a container database, then a physical standby may be a non-container database.
- E. All broker actions execute at the root container for container databases.**

Antwort: B,E

Begründung:

In the context of Oracle Data Guard and container databases (CDBs) managed by Data Guard Broker:

* All broker actions execute at the root container for container databases (D): When using Data Guard Broker to manage a CDB, the actions performed by the broker are executed at the level of the root container. This is because the root container maintains the control and configuration information that applies to the entire CDB, including all of its pluggable databases (PDBs).

* After a role change, the broker opens all Pluggable databases (PDBs) on the new primary (E):

Following a role transition such as a switchover or a failover, Data Guard Broker ensures that all PDBs within the CDB of the new primary database are opened, which is essential to resume operations of the PDBs without manual intervention. References:

69. Frage

Your Data Guard environment consists of these components and settings:

1. A primary database
2. Two remote physical standby databases
3. The redo transport mode is set to sync
4. Real-time query is enabled for both standby databases
5. The DB_BLOCK_CHECKING parameter is set to TRUE on both standby databases You notice an increase in redo apply lag time on both standby databases.

Which two would you recommend to reduce the redo apply lag on the standby databases?

- A. Increase the size of standby redo log files on the standby databases.**

- B. Increase the number of standby redo log files on the standby databases.
- C. Increase the size of the buffer cache on the physical standby database instances.
- D. Decrease the redo log file size on the primary database.
- E. Lower DB_BLOCK_CHECKING to MEDIUM or low on the standby databases.

Antwort: A,E

Begründung:

To reduce the redo apply lag on standby databases, one could increase the size of the standby redo log files.

Larger redo log files can accommodate more redo data, which may reduce the frequency of log switches and allow for more continuous application of redo data. Additionally, lowering the DB_BLOCK_CHECKING parameter to MEDIUM or LOW on the standby databases can help improve redo apply performance. High block checking can impose additional CPU overhead during the application of redo data, potentially increasing apply lag times. By reducing the level of block checking, you can lessen this overhead and help reduce the apply lag.

70. Frage

In Oracle Database 19c, you can set the value of database initialization parameters in a database using the EDIT DATABASE... SET PARAMETER Command:

```
DGMGRL> EDIT DATABASE 'boston' SET PARAMETER log_archive_trace - 1;
```

Which THREE statements are TRUE about the command?

- A. The EDIT DATABASE PARAMETER command can be used to set the value of a static parameter in a database.
- B. The value set using this command is directly applied to the boston database.
- C. The value set using this command is directly stored in the broker configuration file.
- D. The edit database parameter command can only be used to modify the value of a dynamic parameter in a database.
- E. The database must be available when the above command is run.

Antwort: B,D,E

Begründung:

The EDIT DATABASE...SET PARAMETER command in Data Guard Management (DGMGRL) is used to modify the value of initialization parameters for a database within a Data Guard configuration. This command can be used to modify both static and dynamic parameters, but if a static parameter is changed, the new value will take effect only after the database is restarted. The database must be up and running for the command to execute, and the values set using the command are directly applied to the specified database (in this case, 'boston').

71. Frage

Which THREE statements are true about Far Sync instances?

- A. They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary.
- B. They use an spfile, a standby controlfile, and standby redo logs.
- C. They work with any protection level.
- D. The Data Guard Broker must be used to deploy and manage Far Sync instances.
- E. A primary database can ship redo directly to multiple Far Sync instances.

Antwort: A,D,E

Begründung:

Far Sync instances are a feature of Oracle Data Guard designed to support zero data loss protection over long distances:

The Data Guard Broker must be used to deploy and manage Far Sync instances (A): Data Guard Broker simplifies the deployment and management of Far Sync instances, which are an integral part of zero data loss protection configurations.

They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary (C): Far Sync instances are designed to receive redo from the primary database and then forward it to a remote standby database, thereby avoiding any performance impact on the primary database itself.

A primary database can ship redo directly to multiple Far Sync instances (E): A primary database can be configured to send redo logs to more than one Far Sync instance, which can then forward the redo to their respective remote standby databases.

72. Frage

Which two Data Guard features require the use of flashback database by the broker?

- A. Snapshot Standby databases
- B. Far Sync Instances
- C. Real Time Query
- D. Fast-Start Failover
- E. Read-Mostly physical standby implementations

Antwort: A,D
