

1z1-076 Latest Dump - Reliable Exam 1z1-076 Topic and Authorized Official Oracle Database 19c: Data Guard Administration Study Guide

BONUS!!! Download part of ValidVCE 1z1-076 dumps for free: https://drive.google.com/open?id=1PFIMLtkn_6p7_xuK8dWl1PAKPfFAPcIS

ValidVCE Oracle Database 19c: Data Guard Administration (1z1-076) exam questions are consistently updated to make sure they are according to the Oracle latest exam syllabus. If you choose ValidVCE, you can be sure that you'll always get the updated and real 1z1-076 exam questions, which are essential to go through the 1z1-076 test in one go. In addition, we also offer up to 1 year of free Oracle 1z1-076 certification exam question updates. These free updates ensure that candidates get access to the latest Oracle exam questions even after they have made their initial purchase.

According to the needs of all people, the experts and professors in our company designed three different versions of the 1z1-076 certification training materials for all customers. The three versions are very flexible for all customers to operate. You can choose the version for yourself which is most suitable, and all the 1z1-076 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the 1z1-076 latest questions to preparing for your 1z1-076 exam.

Oracle 1z1-076 test cram - Oracle Database 19c: Data Guard Administration

ValidVCE can promise that our 1z1-076 training material have a higher quality when compared with other study materials. With over a decade's business experience, our 1z1-076 study tool has attached great importance to customers' purchasing rights all along. The 1z1-076 study materials of our website do not affect the user's normal working and learning, and greatly improves the utilization rate of time, killing two birds with one stone. It is no doubt that our study materials will help you pass your 1z1-076 Exam in a shortest time.

Oracle Database 19c: Data Guard Administration Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which three are prerequisites for using Data Guard Broker?

- A. Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances.
- B. If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration.
- C. A statically defined listener end-point must be registered with the local listener on the servers hosting the standby database instances.
- D. DG_BROKER_START must be set to TRUE for a database instance before adding the database to the broker configuration.
- E. The primary and standby databases must run the same version of the Oracle Database server.
- F. The broker configuration files for a RAC database must reside in shared storage accessible by all the RAC database instances.

Answer: A,B,E

Explanation:

Data Guard Broker is a management tool that simplifies the configuration, management, and monitoring of Data Guard environments. The prerequisites for using Data Guard Broker include:

* The primary and standby databases must run the same version of the Oracle Database server (A):

This ensures compatibility between the primary and standby databases and enables seamless role transitions and data synchronization.

* Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances (B): Proper network connectivity is essential for communication between the primary and standby databases, allowing for the replication of data and the synchronization of changes.

* If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration (D): In Real Application Clusters (RAC) environments, shared storage ensures that all instances of the RAC database can access the broker configuration files, facilitating the management of the Data Guard environment across all instances. References:

* Oracle Data Guard Broker documentation

* Oracle Real Application Clusters Administration and Deployment Guide

NEW QUESTION # 25

A Data Guard environment has this configuration and these attributes:

A primary database

A physical standby database named sbdb

The configuration is in maximum availability protection mode.

Then sbdb is converted to a snapshot standby database.

Which two statements are true?

- A. sbdb can still apply redo.
- B. The recovery point objective increases.
- C. The protection mode is lowered to maximum performance.
- D. sbdb can still receive redo.
- E. The recovery time objective increases.

Answer: B,D

NEW QUESTION # 26

Examine the Data Guard configuration after an accidental switchover to Sheep:

DGMGRL> show configuration;

Configuration - Animals

Protection Mode: MaxAvailability

Databases:

sheep - Primary database

dogs - Logical standby database

cats - Physical standby database (disabled)

ORA-16795: the standby database needs to be re-created

Fast-Start Failover: DISABLED

Configuration Status:

SUCCESS

Which three statements will be true after a switchover to Dogs?

- A. Sheep will be an enabled logical standby database.
- B. Cats will be an enabled physical standby database.
- C. Cats will be a disabled physical standby database that can be manually enabled.
- D. Sheep will be a disabled logical standby database.
- E. Dogs will be the primary database.

Answer: A,C,E

NEW QUESTION # 27

Which three statements are true..... With no Oracle Streams or GoldenGate configured?

- A. They are required on a physical standby for real-time apply.
- B. It is recommended to have them on the...
- C. They are required only for synchronous redo transport
- D. They are required on a logical standby for real-time apply
- E. The LGWR process writes to them on
- F. Only standby databases can write redo....

Answer: A,D,E

Explanation:

C; The LGWR (Log Writer) process is responsible for writing redo entries from the redo log buffer to the online redo log files on the primary database. This is a fundamental process in the Oracle Database architecture, ensuring that all changes made to the database are captured for purposes such as recovery, replication, and high availability.

D; Real-time apply on a logical standby database requires standby redo log files. The standby redo log files are used to store redo data received from the primary database before it is applied to the logical standby database.

This enables the logical standby to apply changes as they are received, without waiting for the current redo log file to be archived.

E; Similarly, on a physical standby database, standby redo log files are used for real-time apply. They store redo data from the primary database, allowing the physical standby to apply redo data concurrently as it is received, rather than waiting for redo log files to be archived. This capability is crucial for maintaining a physical standby database that is closely synchronized with the primary database with minimal lag.

These functionalities are integral to Oracle Data Guard configurations and are not dependent on Oracle Streams or Oracle GoldenGate, which are separate technologies for data replication and integration.

NEW QUESTION # 28

Which THREE are always benefits of using a logical standby database?

- A. It can be used for reporting workloads requiring additional indexes or materialized views or both.
- B. It can be used for database rolling release upgrades.
- C. It can be used for testing patchsets without affecting the primary database.
- D. It provides a disaster-recovery solution with switchover and failover options that can recover any data updated on the primary database.
- E. It can be used to replicate a single pluggable database (PDB) in a multitenant container database.
- F. It can be used as an updatable database for Real Application Testing and then converted back to a standby database without affecting the updates.

Answer: A,B,D

Explanation:

Logical standby databases are a key feature of Oracle Data Guard and offer several distinct advantages, especially in terms of flexibility for reporting, upgrades, and disaster recovery:

* Disaster-recovery solution with switchover and failover options (A): Logical standby databases provide a robust disaster-recovery solution, ensuring that any data updated on the primary database can be recovered. They support both switchover and failover operations, allowing for smooth role transitions between the primary and standby databases.

* Used for reporting workloads requiring additional indexes or materialized views (B): Logical standby databases can be opened for read-write operations and can have additional indexes or materialized views that are not present in the primary database. This makes them ideal for offloading reporting and querying workloads from the primary database.

* Database rolling release upgrades (D): Logical standby databases can be used to perform rolling upgrades of the Oracle Database software. This allows the database to be upgraded with minimal downtime, as the standby database is upgraded first, followed by a switchover to make it the new

* primary. References:

NEW QUESTION # 29

.....

Based on the credibility in this industry, our 1z1-076 study braindumps have occupied a relatively larger market share and stable sources of customers. Such a startling figure --99% pass rate is not common in this field, but we have made it with our endless efforts. As this new frontier of personalizing the online experience advances, our 1z1-076 exam guide is equipped with comprehensive after-sale online services. It's a convenient way to contact our staff, for we have customer service people 24 hours online to deal with your difficulties. If you have any question or request for further assistance about the 1z1-076 study braindumps, you can leave us a message on the web page or email us.
