問題 #90

You deployed the Extensible Flexfield (EFF) successfully but it is not visible in the order capture additional information section. What are the two reasons for this?

- A. The EFF has not been compiled.
- B. The EFF definition needs to be frozen.
- C. The EFF segments are incomplete.
- **D. The custom extensible flexfields are not published.**
- **E. The EFF context is not associated with the page.**

答案： D,E

解題說明：

These are the two reasons why the Extensible Flexfield (EFF) is not visible in the order capture additional information section. An EFF is a user-defined flexfield that you can use to capture additional information on sales orders, such as trade compliance, call center details, or source order status¹. To make an EFF visible in the order capture additional information section, you need to perform the following steps²:

* Associate the EFF context with the page: You need to specify which page in the Order Management work area will display the EFF, such as the order header or the order line. You can use the Pages tab in the Manage Order Extensible Flexfields task to associate the EFF context with the page.

* Publish the custom extensible flexfields: You need to deploy the EFF to the database and make it available for use. You can use the Deploy Flexfield task to publish the custom extensible flexfields.

問題 #91

Your company has a requirement to transform sales orders imported from a legacy system into cloud.

Which Oracle Business Rule component determines the specific rule that will be used to transform the imported orders?

- **A. Rule Conditions**
- B. Facts
- C. Rule Dictionary
- D. Rule Actions

答案： A

解題說明：

Rule conditions are the Oracle Business Rule component that determines the specific rule that will be used to transform the imported orders. Oracle Business Rules are a set of logic statements that define the behavior of an application or a process, such as order transformation, order orchestration, or order approval¹. A rule consists of two parts: a condition and an action. A rule condition is a statement that evaluates to true or false based on the input data, such as order attributes, order lines, or order status. A rule action is a statement that performs a specific task or operation when the rule condition is true, such as updating order attributes, creating order lines, or changing order status². You can use the Manage Order Transformation Rules task to define the rule conditions and actions for transforming the imported orders from a legacy system into Oracle Order Management Cloud³.

- A. Sales Pricing Strategy Assignment
- B. Price List Strategy Assignment
- C. Pricing Term Adjustment
- **D. Pricing Segment**
- E. Line Pricing Strategy Assignment

答案： D

問題 #93

Your organization has critical requirements for maintaining the supply of volatile, high-demand items to your customers. Global Order Promising can support this requirement through a multilevel allocation feature for allocating supplies for high-demand items with constrained availability.

How many user-defined segment hierarchies does this feature support?

- A. Two
- **B. Four**
- C. Unlimited
- D. Three

答案： B

問題 #94

Your customer requires order revisions from an external system, but is concerned that all order lines will have to be sent again in the revised order even though there are typically changes to only one or two lines.

Which three assurances will you give your customer to allay their fears?

- **A. A revised order can contain just the updated order line.**
- **B. Missing order lines are not assumed to be canceled.**
- C. All order lines will have to be sent again in the revised order.
- **D. Order lines can be canceled by sending a cancellation request.**
- E. Missing order lines are assumed to be canceled.
