## Flexible Salesforce OmniStudio-Developer Testing Engine - OmniStudio-Developer Valid Test Duration

NewPassLeader offers highly designed Salesforce OmniStudio-Developer exam questions and online OmniStudio-Developer practice test engine to help you successfully clear the Salesforce exam. Their study materials cover all the basic to advanced required OmniStudio-Developer Exam Questions material that you need to know to pass the OmniStudio-Developer Exam. These two simple, easy, and accessible learning formats will boost your confidence.

Salesforce OmniStudio-Developer Certification Exam is an excellent way for developers to demonstrate their expertise in building and customizing applications on the Salesforce platform using the powerful OmniStudio platform. By passing the exam and earning the certification, developers can enhance their careers and increase their value to employers and clients alike.

## Salesforce Certified OmniStudio Developer Sample Questions (Q20-Q25):

### NEW QUESTION # 20

Refer to the exhibit.

A developer creates an OmniScript display FirstName, LastName, and BirthDate of a contact using a Type Ahead Block. The DataRaptor used in the Type Ahead has been tested and fetches the correct data.  
When previewing Omniscript, the developer enters a name in the Type Ahead and makes a selection of a contact from the list. However, the text fields FirstName, LastName, and BirthDate are not getting populated with the data.

What is the reason that the fields fail to display the fetched data?

- A. Use Data JSON is not selected in the properties of the Type Ahead Block.
- B. **FirstName, LastName, and BirthDate are not placed inside the Type ahead Block.**
- C. The Typeahead key is not in the correct format
- D. Lookup Mode is not selected in the properties of the Type A Head Block.

**Answer: B**

#### NEW QUESTION # 21

A developer needs to create DataRaptor to retrieve the name of an account for a contact. Following best practices, how should a developer configure the extraction steps?

- A. **Define an extraction step for the Contact object and set the Extract JSON Path to Contact.Account.Name**
- B. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Contact.Account.Name
- C. Define an extraction step for the Account object, and set the Extract JSON Path to AccountContact.Name
- D. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Account.Name

**Answer: A**

Explanation:

A DataRaptor Extract can retrieve data from multiple objects using extraction steps and JSON paths.

However, if the data is from a single object, only one extraction step is needed. The Extract JSON Path can use dot notation to access related fields from that object, such as Contact.Account.Name.

#### NEW QUESTION # 22

A developer is configuring the API URL in an HTTP Action element within an Integration procedure. What is the merge code syntax for passing a Date node from an element named SetValues in the URL?

- A. %SetValues Date
- B. **{(SetValues. Date)}**
- C. x%&SetValues.Date%&
- D. (' Setvalues') [ 'Date']

**Answer: B**

Explanation:

The correct syntax for merge codes in Integration Procedure is **{(NodeName)}**, where **NodeName** is the name of the JSON node in the data source. The other options are either missing the parentheses or using incorrect symbols.

#### NEW QUESTION # 23

Refer to the exhibit below. What is the merge code needed for this Integration Procedure structure to pass a CaseData node from the HTTP Action's output to the DataRaptor Transform Action?

- A. **{ HTTPGetCaseDetails:CaseData }**
- B. %HTTPGetDetails:CaseData%
- C. **{ {CaseData} }**
- D. **%DRXformCaseData: CaseData%**

**Answer: D**

#### NEW QUESTION # 24

A developer needs to display read-only contact information in a OmniScript. The developer will format the information as a table, using merge codes to dynamically include first name, last name, street address, state, postal, code, and country from the data JSON. Which OmniScript element should the developer use to meet this requirement?

- A. Edit Block
- B. Text Block
- C. Rich text Area
- D. Text area

**Answer: B**

### Explanation:

A Text Block element allows the developer to display read-only text in a table format, using merge codes to dynamically include data from the data JSON. A Rich Text Area element is used to display formatted text with images and links. A Text Area element is used to display editable text in a single line or multiple lines. An Edit Block element is used to display editable fields in a form layout.
