EMC Dell Technologies PowerMax Operate Sample Questions (Q106-Q111):

NEW QUESTION # 106

A PowerMax systems administrator has created three storage groups with the diamond, gold, and silver service levels. How does the system ensure the service level response times are met during heavy workloads?

- A. Service levels are identical on All Flash systems

- B. By allocating more device cache slots to Diamond
- **C. By throttling the host front-end IOs**
- D. By throttling the back-end IOs

Answer: C

NEW QUESTION # 107

NEW QUESTION # 108

Refer to the exhibit.

What is the Unisphere for PowerMax deployment option pictured?

- **A. Remote**
- B. Either remote or local
- C. Embedded
- D. Local

Answer: A

Explanation:

Step by Step Comprehensive Detailed Explanation:

Unisphere for PowerMax offers different deployment options to manage PowerMax storage arrays. Based on the exhibit, we can identify the following:

* **Separate SYMAPI Server:** The diagram shows a dedicated SYMAPI server. SYMAPI (Symmetrix Application Programming Interface) is a command-line interface used to manage PowerMax and VMAX storage arrays. This indicates that the Unisphere server is not directly connected to the storage arrays.

* **Unisphere Server Connected to SYMAPI Server:** The Unisphere server is shown to be connected to the SYMAPI server. This means that the Unisphere server relies on the SYMAPI server to communicate with the PowerMax arrays.

* **No Direct Connection to Arrays:** The Unisphere server does not have a direct connection to the PowerMax arrays.

Considering these points, the deployment option depicted in the exhibit is a remote deployment. In a remote deployment, the Unisphere server is installed on a separate host and communicates with the PowerMax arrays through a SYMAPI server. This allows for centralized management of multiple arrays from a single Unisphere instance.

Why other options are incorrect:

* **A. Embedded:** In an embedded deployment, the Unisphere software runs directly on the PowerMax array itself. This eliminates the need for a separate Unisphere server.

* **B. Either remote or local:** While the diagram could technically represent a local deployment with a dedicated SYMAPI server, the presence of the separate SYMAPI server and the lack of direct connection to the arrays strongly suggest a remote deployment.

* **D. Local:** In a local deployment, the Unisphere server is typically installed on the same host as Solutions Enabler, which has direct connectivity to the storage arrays.

References and documents of Dell's public documentation for PowerMax Operate v.2:

* **Dell Unisphere for PowerMax 10.0.0 Installation Guide:** This guide provides detailed information about the different Unisphere deployment options, including local, remote, and embedded. It also includes diagrams and explanations of each deployment scenario. You can find this document on the Dell Support website by searching for "Unisphere for PowerMax Installation Guide."

* **Dell PowerMax Family: Essentials and Best Practices Guide:** This guide offers a general overview of PowerMax systems and their management using Unisphere. It may provide context for understanding the different deployment options.

NEW QUESTION # 109

Production work has been started on the R2 devices after an SRDF Failover operation. Where will the changes made to the R2 devices be reflected in the SRDF Query output shown in the exhibit?

- **A. 0**

- B. 1
- **C. 2**
- D. 3

Answer: C

NEW QUESTION # 110

Exhibit.

Which activity needs to be performed prior to the operations shown in the exhibit?

- A. Target volumes should be unmapped
- B. Snapshot should be terminated
- **C. Target volumes should be unmounted**
- D. TTL setting should be changed

Answer: C
