It is designed to test an individual's knowledge and understanding of these areas and their ability to apply them in real-world scenarios. CGEIT Exam consists of 150 multiple-choice questions, and candidates have four hours to complete the exam.

ISACA Certified in the Governance of Enterprise IT Exam Sample Questions (Q500-Q505):

NEW QUESTION # 500

Which of the following is the BEST method for making a strategic decision to invest in cloud services?

- A. Benchmarking.
- B. Define a balanced scorecard.
- C. Prepare a business case.
- D. Prepare a request for information (RFI),

Answer: C

Explanation:

A business case is the best method for making a strategic decision to invest in cloud services, as it provides a structured and comprehensive analysis of the costs, benefits, risks, and value proposition of the proposed investment. A business case can help justify the need for cloud services, compare different options and alternatives, and align the investment with the enterprise's strategy and objectives. A request for information (RFI) is a document that solicits information from potential vendors or suppliers, but it does not provide a decision-making framework. Benchmarking is a process of comparing the performance or practices of an enterprise with those of others, but it does not evaluate the feasibility or desirability of cloud services. A balanced scorecard is a tool that measures and monitors the performance of an enterprise or a business unit against strategic goals and objectives, but it does not assess the viability or suitability of cloud services. NEW QUESTION # 501

Which of the following should be established FIRST so that data owners can consistently assess the level of data protection needed across the enterprise?

- A. Data classification policy
- B. Data encryption program
- C. Data risk management program
- D. Data retention policy

Answer: A

Explanation:

A data classification policy is a plan that helps an organization determine the risk tolerance and security requirements for its data assets. A data classification policy separates data into different categories based on its sensitivity, such as public, private, or restricted. A data classification policy should be established first so that data owners can consistently assess the level of data protection needed across the enterprise, as it helps them to identify the types and locations of data they own, the potential threats and impacts of data breaches, and the appropriate security controls and measures to safeguard their data. A data classification policy also helps to ensure compliance with regulatory and legal obligations, as well as to optimize data management and governance practices. NEW QUESTION # 502

The BEST time to identify metrics to measure the performance of an IT-enabled investment is during:

- A. business case development.
- B. investment feasibility analysis
- C. project initiation
- D. system implementation

Answer: A

Explanation:

The BEST time to identify metrics to measure the performance of an IT-enabled investment is during business case development. A

business case is a document that provides the rationale and justification for initiating a project or investment¹. It includes information such as the objectives, scope, benefits, costs, risks, assumptions, and success criteria of the proposed project or investment². Identifying metrics to measure the performance of an IT-enabled investment during business case development can help to:

- * Define the expected outcomes and value of the investment³
- * Establish a baseline and targets for comparison and evaluation⁴
- * Align the investment with the strategic goals and objectives of the enterprise⁵
- * Communicate and demonstrate the benefits and impacts of the investment to stakeholders
- * Monitor and control the progress and performance of the investment throughout its lifecycle

NEW QUESTION # 503

What should be done FIRST when feedback indicates recently implemented software products are not meeting business unit expectations?

- A. Review help desk logs.
- B. Institute a new software training program
- C. Request a gap analysis.
- D. Confirm user acceptance testing (UAT) was completed.

Answer: D

NEW QUESTION # 504

An enterprise considering implementing IT governance should FIRST develop the scope of the IT governance program and:

- A. communicate the program to stakeholders to gain consensus.
- B. initiate the program using an implementation roadmap.
- C. acquire the resources that will be required.
- D. establish initiatives for business and managers.

Answer: A

Explanation:

Communicating the program to stakeholders to gain consensus is the first step after developing the scope of the IT governance program, as it helps to ensure that the program is aligned with the enterprise goals and objectives, and that it has the support and commitment of the key parties who have an interest or influence in the IT governance. Communication also helps to overcome resistance, address concerns, and foster collaboration among the stakeholders¹². References = CGEIT Exam Content Outline, Domain 1, Subtopic A:

Governance Framework, Task 3: Ensure that stakeholder needs, conditions and options are evaluated to determine balanced, agreed-on enterprise objectives to be achieved; setting direction through prioritization and decision making; and monitoring performance and compliance against agreed-on direction and objectives.
