#### NEW QUESTION # 173

Which statement is true about governing data lakes in IBM Knowledge Catalog?

- A. It increases the time and effort required for data discovery and cataloging.
- **B. It automates data discovery and provides access to enterprise data through virtualization.**
- C. It relies on manual processes for accessing enterprise data.
- D. All data is masked with no user intervention.

**Answer: B**

Explanation:

Within IBM Knowledge Catalog as part of IBM Cloud Pak for Data, governing data lakes is enabled via integration with Data Virtualization. This approach supports automated data discovery, cataloging, tagging, and virtualization, allowing users to access enterprise data virtually-without physical movement. Policies and governance metadata are applied automatically to virtualized assets, enabling secure and efficient data consumption. Manual processes are not required for discovery, and data is masked selectively based on policies-not completely masked without user intervention. Thus automation and virtualization are central, making statement B correct.

#### NEW QUESTION # 174

What are two considerations when choosing the type of storage for Cloud Pak for Data?

- **A. The storage provides sufficient I/O performance.**
- **B. The storage supports the services that will be installed.**
- C. The storage network must support a minimum transmission speed of 4 Gbps.
- D. NFS storage supports all Cloud Pak for Data services.
- E. The storage data has a throughput minimum of 16 MB/s per disk.

**Answer: A,B**

Explanation:

When selecting storage for Cloud Pak for Data, two critical considerations are:

Ensuring the storage supports the specific services being deployed. Not all services are compatible with every storage type (e.g., some services require block storage, others may support NFS).

The storage must provide sufficient I/O performance to meet the operational demands of the workloads.

Transmission speeds and throughput metrics are useful but not directly required as standalone criteria.

Additionally, NFS is not universally supported by all services; some services specifically require RWO (ReadWriteOnce) or RWX (ReadWriteMany) access modes.
