

Cisco 300-540 Valid Exam Tutorial | 300-540 Certification

BONUS!!! Download part of Test4Engine 300-540 dumps for free: <https://drive.google.com/open?id=1MFVyslR3thw7F2t4BvhglQwmS1IJMAY>

Provided you get the certificate this time with our 300-540 practice materials, you may have striving and excellent friends and promising colleagues just like you. It is also as obvious magnifications of your major ability of profession, so 300-540 practice materials may bring underlying influences with positive effects. The promotion or acceptance will be easy. So it is quite rewarding investment.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.
Topic 2	<ul style="list-style-type: none">• Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR• MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.

Topic 3	<ul style="list-style-type: none"> Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.
Topic 4	<ul style="list-style-type: none"> High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.
Topic 5	<ul style="list-style-type: none"> Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.

300-540 Certification | Valid Braindumps 300-540 Book

It is well known that Cisco certification plays a big part in the IT field and obtaining it means you have access to the big companies and recognized by the authority. But the reality is that the 300-540 Braindumps torrents are very difficult and the pass rate of 300-540 practice test is low. So choosing our exam training materials are very necessary to every candidate.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q69-Q74):

NEW QUESTION # 69

The use of Yang models in network configuration is to:

- A. Increase the complexity of network scripts
- B. Replace XML-based data models
- C. Simplify the parsing of binary data
- D. Provide a standardized data modeling language

Answer: D

NEW QUESTION # 70

When troubleshooting DCI solutions, which of the following tools or concepts are crucial? (Choose two)

- A. ACI for centralized application-focused network policies
- B. EVPN VXLAN for extending layer 2 services over a layer 3 network
- C. SNMP for managing network devices
- D. IPsec VPN for enhancing physical security measures

Answer: A,B

NEW QUESTION # 71

An engineer must enable the highest level of logging when troubleshooting Cisco NFVIS. Which command must be run?

- A. system set-log logtype configuration level error
- B. system set-log logtype configuration level warning
- C. system set-log logtype configuration level critical
- **D. system set-log logtype operational level debug**

Answer: D

Explanation:

Comprehensive and Detailed Explanation

Cisco NFVIS logging levels (from lowest to highest):

- * critical
- * error
- * warning
- * info
- * debug#highest verbosity

To capture maximum diagnostic detail, engineers must enable debug logging on the operational log type, which records system activity and runtime behavior.

Thus the correct command is:

```
system set-log logtype operational level debug
```

This provides the deepest troubleshooting visibility.

NEW QUESTION # 72

An engineer must configure NTP servers in Cisco Enterprise NFVIS. The primary NTP server has an IP address of 192.168.1.1 and the backup NTP server has an IP address of 192.168.2.1. Which two commands must be run to complete the configuration? (Choose two.)

- A. utils ntp server add 192.168.1.1 primary
- B. system set-manual-time 192.168.1.1 192.168.2.1
- **C. system time ntp preferred_server 192.168.1.1**
- **D. system time ntp backup_server 192.168.2.1**
- E. utils ntp server add 192.168.2.1 backup

Answer: C,D

Explanation:

In Cisco Enterprise NFVIS, time synchronization is configured using the `system time ntp` command structure.

NFVIS requires a primary and optionally a backup NTP server to maintain accurate system time for the hypervisor and guest VMs.

Correct NFVIS command syntax for NTP configuration:

* `system time ntp preferred_server <IP>` This command configures the preferred (primary) NTP server used for system clock synchronization.

* `system time ntp backup_server <IP>` This command configures the backup NTP server, which the system uses if the primary becomes unreachable.

These two commands match Cisco NFVIS time-configuration behavior described in NFV infrastructure design and implementation guidelines.

Why the Correct Answers Are A and E

Option A: `system time ntp preferred_server 192.168.1.1`

This properly configures the primary NTP server in NFVIS. The preferred server is always the first choice for time synchronization.

Option E: `system time ntp backup_server 192.168.2.1`

This correctly configures the backup NTP server. If the preferred server fails, NFVIS automatically falls back to the backup server.

Both commands directly match NFVIS's NTP command hierarchy and are the only ones that correctly apply to NFVIS.

Why the Other Options Are Not Correct

Option B uses `utils ntp`, which is not an NFVIS command.

Option C sets manual time and does not configure NTP servers.

Option D also uses the `utils ntp` syntax, which applies to other Cisco platforms but not NFVIS.

NEW QUESTION # 73

The primary benefit of MACSEC is:

- A. Increasing the speed of network devices
- B. Filtering traffic based on content
- C. Encrypting frames on a network
- D. Authenticating users accessing the network

Answer: C

NEW QUESTION # 74

.....

The greatest product or service in the world comes from the talents in the organization. Talents have given life to work and have driven companies to move forward. Paying attention to talent development has become the core strategy for today's corporate development. Perhaps you will need our 300-540 Learning Materials. No matter what your ability to improve, our 300-540 practice questions can meet your needs. And with our 300-540 exam questions, you will know you can be better.
