Sharing-and-Visibility-Architect Valid Exam Practice - Sharing-and-Visibility-Architect Test Vce

The web-based Salesforce Sharing-and-Visibility-Architect Practice Exam is compatible with all operating systems, including Mac, Linux, iOS, Android, and Windows. It is a browser-based Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) practice exam that works on all major browsers, including Chrome, Firefox, Safari, Internet Explorer, and Opera. This means that you won't have to worry about installing any complicated software or plug-ins.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q33-Q38):

NEW QUESTION # 33

Sales manager at universal containers (UC) have requested viewing customer invoices in Salesforce. Invoice data is mastered in the ERP system. The architect at UC decided to surface the customer invoices in salesforce using external objects and did the following:
-Configured an external object called Invoice.
-Created a lookup relationship between account and the invoice.
How can the architect grant the sales managers access to the customer invoices data?

- A. By creating sharing rules to share the invoices records with users in sales mangers roles.
- B. By creating manual sharing to share invoices with relevant sales managers.
- C. By creating controlling the invoices object permission on the sales manager's profile.
- D. By creating a sharing set to share invoices with users in sales manager role.

Answer: C

NEW QUESTION # 34

Universal Containers (UC) has 200 distributors that use Partner Community licenses.
Partners cannot see each other's data, but UC is also trying to give more visibility to data for certain individuals at a distributor.
HOW can an Architect give users in the partner user role access to all Case and Container records owned by any user, regardless of role, at the same distributor?

- A. Create an ownership-based sharing rule.
- B. Create a Permission Set granting "View All" permission to Case and Container records.
- C. Create sharing sets.
- D. Give super user permission to the individual partner users.

Answer: D

Explanation:
Explanation
To give users in the partner user role access to all Case and Container records owned by any user at the same distributor, an Architect can give super user permission to the individual partner users. Super user permission allows partner users to access data owned by other partner users belonging to the same account or below them in the role hierarchy. Creating an ownership-based sharing rule will not work, as it will share records based on the owner's role or territory, not their account. Creating sharing sets will not work, as they are only available for Customer Community licenses, not Partner Community licenses. Creating a Permission Set granting "View All" permission to Case and Container records will not work, as it will give access to all records in those objects, regardless of their owner or account.

NEW QUESTION # 35

Universal Containers (UC) service reps are assigned to a profile which has View All on the Case object. The organization-wide default (OWD) for the Account and Case objects is Private.
To make sure service reps have access to all relevant information (Accounts and Contacts) to attend to customer requests, which detail should an architect consider?

- A. Service reps will be able to access the relevant Contacts if their OWD is Controlled by Parent.
- B. Service reps will NOT be able to access the relevant Contacts if their OWD is Controlled by Parent.
- C. Service reps will NOT be able to access the relevant Accounts if their OWD is Private.

Answer: A

Explanation:
* OWD Settings and Access Control:

* When the OWD for Contacts is "Controlled by Parent," access to the Contact is determined by access to the related Account.
* Why Option C is Correct:
* Service reps have "View All" permission on Cases, granting them access to related Accounts.
Since Contacts are controlled by the parent Account, service reps also gain access to relevant Contacts.
* Why Others Are Incorrect:
* Option A: Service reps can access Accounts related to Cases they can view, even if the OWD is Private.
* Option B: Contacts controlled by the parent are accessible as long as the parent Account is accessible.
For detailed guidance, see Salesforce documentation on OWD and Controlled by Parent: https://help.
salesforce.com/

NEW QUESTION # 36

Jane, a support representative at Universal Containers, created a report to view all her open cases that have been created in the past 7 days and saved the report in the "Private Reports" folder.
Who can view and run the report?

- A. The report owner
- B. The report owner and anybody in the role hierarchy above the report owner
- C. The report owner and users with the "View All Data" permission
- D. The report owner and any users who have been given access to the "My Private Reports" folder

Answer: A

Explanation:
Explanation
The report owner is the only one who can view and run the report that is saved in the "Private Reports" folder.
Option A is incorrect, since there is no such thing as the "My Private Reports" folder in Salesforce. Option B is incorrect, since the role hierarchy does not affect the access to private reports. Option D is incorrect, since the "View All Data" permission does not grant access to private reports.

NEW QUESTION # 37

Universal Containers (UC) has implemented Service Cloud. There is a flag field on the case object that marks a case as (Sensitive). UC requested that this flag can be viewed by all users who have access to the case but only be edited by the assigned case assessor. The case assessor is a lookup field on the case object. How can an architect achieve this requirement?

- A. Field-level security
- B. Custom Lightning Component.
- C. Object Permissions.
- D. Permission Set.

Answer: B

NEW QUESTION # 38

......

If you are busy with your work and have little time to prepare for the exam. You can just choose our Sharing-and-Visibility-Architect learning materials, and you will save your time.
