Valid CT-UT Exam Voucher | CT-UT Latest Study Notes

The actual ISTQB Certified Tester Usability Tester (CT-UT) exam environment that the practice exam creates is beneficial to counter ISTQB Certified Tester Usability Tester (CT-UT) exam anxiety. Tracking and reporting features of this CT-UT practice test enables you to assess and enhance your progress. The third format of TrainingDump product is the desktop ISTQB Certified Tester Usability Tester (CT-UT) practice exam software. It is an ideal format for those users who don't have access to the internet all the time. After installing the software on Windows computers, one will not require the internet. The desktop CT-UT practice test software specifies the web-based version.

ISTQB Certified Tester Usability Tester Sample Questions (Q27-Q32):

NEW QUESTION # 27

You're redesigning the web shop of a customer and found out that they are using legacy web design techniques like HTML tables for design matters, making the website hard to be operated using alternative input and output devices (e.g. screen readers). Which kind of risk is most likely to occur?

- A. Accessibility risk
- B. Usability risk
- C. User experience risk
- D. There's no risk predictable

Answer: A

Explanation:

The use of HTML tables for layout instead of proper semantic HTML and responsive design violates accessibility guidelines, particularly those defined in the Web Content Accessibility Guidelines (WCAG).

Such a design makes it difficult or impossible for users relying on screen readers, keyboard navigation, or other assistive technologies to interact effectively with the site. Therefore, this creates a significant accessibility risk, which is distinct from general usability or user experience risks. Accessibility ensures inclusion of users with physical or cognitive impairments, making option B the correct choice.

#####

NEW QUESTION # 28

A company distributes its products over a web shop where users can put items in their shopping cart. After they click on "checkout", the checkout process starts and users cannot go back anymore to correct possible mistakes. The only way is to hit the "back" button of the browser, which might lead to an expired session and therefore losing all items in the shopping cart.

Which of the following heuristics would best describe this usability issue?

- A. Visibility of system status
- B. Aesthetic and minimalist design
- **C. User control and freedom**
- D. Help and documentation

Answer: C

Explanation:

The described issue violates the usability heuristic "User control and freedom," as defined by Jakob Nielsen.

This principle emphasizes that users should have the ability to undo and redo actions and navigate freely without being trapped in irreversible sequences. In the scenario, users are forced into the checkout process without a clear way to return or correct mistakes, except through the unreliable and disruptive back button.

This design flaw undermines user autonomy and can result in lost progress or frustration.

#####

NEW QUESTION # 29

As an expert for usability, you're in charge of the usability part of the development of a business application for a large customer. You have worked as a usability expert with the development team for two years and are operating well together; the developers value your feedback and give their bests implementing your suggestions. The product is in an early stage, so there's only a rudimentary prototype available.

Given this information, what is the best approach to verify the usability at the current stage?

- A. Usability maturity assessment
- B. Usability test in the lab
- **C. Usability review**
- D. Unmoderated usability test

Answer: C

Explanation:

At an early development stage where only a rudimentary prototype exists, a usability review (e.g., expert or heuristic review) is the most effective method. It allows usability specialists to identify potential usability issues without the need for a fully functioning product. Reviews can provide immediate, actionable feedback to guide design improvements before moving into more resource-intensive usability testing. An unmoderated usability test (B) or lab test (D) may be impractical at this stage due to limited interactivity. A usability maturity assessment (C) evaluates organizational processes and is not applicable to evaluating a specific prototype.

NEW QUESTION # 30

Which of the following elements are addressed by the WCAG?

- i. Resizability of text
- ii. Visually appealing design
- iii. Text alternatives
- iv. Keyboard accessibility
- v. Mouse input

- A. iv & v are true, i, ii & iii are false
- **B. i, iii, iv & v are true, ii is false**
- C. i, ii, & iii are true, iv & v are false
- D. i & iii are true, ii, iv & v are false

Answer: B

Explanation:

The Web Content Accessibility Guidelines (WCAG) provide standards to ensure websites are accessible to people with disabilities. They specifically address:

- i. Text resizing (SC 1.4.4),
- iii. Text alternatives for non-text content (SC 1.1.1),
- iv. Keyboard accessibility (SC 2.1.1),
- v. Device independence, which includes not relying solely on mouse input.

Visually appealing design (ii) is not an accessibility requirement and is thus not a WCAG focus. The correct answer is D: i, iii, iv & v are true; ii is false.

#####

NEW QUESTION # 31

In the last project, the usability tests substantially exceeded the budget of the test plan. Which quality control task could have been used to avoid this?

- **A. Check consumed resources regularly and compare with the estimates**
- B. Check whether the usability test report conforms to the best practices
- C. Check that the usability test plan has been properly reviewed
- D. Check that findings are communicated to the stakeholders

Answer: A

Explanation:

To prevent usability testing from exceeding budget, active monitoring and control of project resources are critical. The best practice is to regularly check consumed time, costs, and effort against the original estimates, allowing timely adjustments to scope or resources. This is a classic quality control practice aligned with ISO 9001 principles and standard project management methodologies. Option A relates to test preparation, option C concerns reporting and communication, and option D applies after test execution. Only option B deals directly with budget control during the test.
