Pass Guaranteed 2026 Authoritative SAP C_CPI_2506 Knowledge Points

Students are worried about whether the C_CPI_2506 practice materials they have purchased can help them pass the exam and obtain a certificate. They often encounter situations in which the materials do not match the contents of the exam that make them

waste a lot of time and effort. But with C_CPI_2506 exam dump, you do not need to worry about similar problems. Because our study material is prepared strictly according to the exam outline by industry experts, whose purpose is to help students pass the exam smoothly. As the authoritative provider of C_CPI_2506 Test Guide, we always pursue high passing rates compared with our peers to gain more attention from potential customers.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 2	SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 3	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 4	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

SAP Certified Associate - Integration Developer Sample Questions (Q34-Q39):

NEW QUESTION # 34

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Message body
- B. Attachment
- C. Message header
- D. Exchange property

Answer: C

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

NEW QUESTION # 35

What are some message protocols that the API Management capability within SAP Integration Suite supports?

Note: There are 2 correct answers to this question.

- A. OData

- B. RFC
- C. IDoc
- **D. SOAP**

Answer: A,D

Explanation:

API Management in SAP Integration Suite supports HTTP-based protocols.

Supported # SOAP, OData, REST (OpenAPI).

Not supported directly # RFC and IDoc (these are legacy SAP protocols handled via Cloud Integration or On- Premise adapters, not via API Management).

Thus, the correct supported message protocols are SOAP and OData.

NEW QUESTION # 36

You configured a content modifier as follows: Action: Create | Name: ProductID | Source Type: XPath Source Value: //ProductID | Data Type: java.lang.string. After testing the content modifier, you receive an error message that contains the following fragment: "Java.lang.ClassNotFoundException: java.lang.string..." What caused the error message?

- **A. Incorrect data type**
- B. Incorrect name
- C. Incorrect source type
- D. Incorrect source value

Answer: A

Explanation:

In SAP Cloud Integration, when defining Content Modifier properties, the Java data type names are case- sensitive.

Correct type # java.lang.String

In the configuration, java.lang.string was used (lowercase "s"), which causes a ClassNotFoundException, since Java cannot find the class.

Other options are correct in form:

Source Type = XPath # Valid.

Source Value = //ProductID # Valid XPath.

Name = ProductID # Valid.

Thus, the error occurred because of incorrect data type specification.

NEW QUESTION # 37

Besides in SAP API Management, where can you find policy templates?

- A. In SAP API Business Accelerator Hub ? Explore Business Processes
- B. In SAP API Business Accelerator Hub- Explore Products
- C. In SAP API Business Accelerator Hub - Explore Discover Integrations
- **D. In SAP API Business Accelerator Hub- Explore Categories ?? APIs**

Answer: D

Explanation:

Besides in SAP API Management, you can find policy templates in SAP API Business Accelerator Hub- Explore Categories ??

APIs. Policy templates are reusable sets of policies that can be applied to APIs to define their behavior and security. In SAP API Business Accelerator Hub, you can explore various categories of APIs that are pre-packaged with policy templates. For example, you can find APIs for sales order processing, customer master data management, product catalog management, and so on. Each API category has a set of policy templates that are suitable for its use case. Reference: SAP API Business Accelerator Hub | SAP Help Portal, Explore Categories | SAP Help Portal

NEW QUESTION # 38

You want to set up Exchange Properties in an integration flow. Besides a Content Modifier, what can you use?

- **A. Groovy SDK scripting**

- Answer: A**
