## Free PDF Quiz 2026 Microsoft MB-820: Microsoft Dynamics 365 Business Central Developer Unparalleled Free Vce Dumps

Practicing with the Microsoft MB-820 practice test, you can evaluate your Microsoft MB-820 exam preparation. It helps you to pass the MB-820 test with excellent results. MB-820 imitates the actual Microsoft Dynamics 365 Business Central Developer exam environment. You can take the Microsoft MB-820 Practice Exam many times to evaluate and enhance your Microsoft MB-820 exam preparation level.

## Microsoft Dynamics 365 Business Central Developer Sample Questions (Q86-Q91):

### NEW QUESTION # 86

You are developing an XMLport to export data from the parent Item table and a related child 'Item Unit of Measure' table. The XMLport configuration must provide the following:

- \* Link the child table to its parent.
- \* Display a confirmation message after the XMLport runs.

You need to generate the XMLport.

What should you do? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

To meet the XMLport configuration requirements:

- \* Link the child table to its parent: Use the OnAfterGetRecord trigger.
- \* Display a confirmation message after the XMLport runs: Use the OnPostXMLPort trigger.

In Business Central, when you are developing an XMLport for data export, triggers are used to perform actions at different stages of the XMLport's operation:

\* **OnAfterGetRecord Trigger:** This trigger fires after a record is retrieved from the database but before it is processed for output in the XMLport. It is the ideal place to link child table records to their parent because you have access to the current record that can be used to set filters or modify data in the child table before it is written to the XML file.

\* **OnPostXMLPort Trigger:** This trigger fires after the XMLport has finished processing all records. It is the correct place to display a confirmation message because it ensures that the message will appear after the entire XMLport operation is complete. Here, you can use application-specific functions to show the message, such as MESSAGE function in AL code.

By placing the appropriate triggers in these positions, you can ensure that the XMLport will link the child records to their parent records during the data export process and will notify the user with a confirmation message once the operation is successfully completed.

## NEW QUESTION # 87

You need to populate the Incident Date and Status fields in the Room Incident table.

Which instructions or trigger should you use? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point

**Answer:**

Explanation:

Explanation:

\* Instructions to use for Incident Date and Status fields:

\* The correct instruction is "Incident Date" := Workdate(); "Status" := Status:=Open;. This ensures that when a new record is created, the Incident Date is set to the current work date, and the Status field is initialized to 'Open'. This is essential for ensuring that the incident data is always timestamped and correctly marked upon creation.

\* Trigger to introduce the function:

\* The correct trigger is Trigger OnModify. This trigger ensures that when a record is modified, such as when an update to the status is made (e.g., from Open to Closed), the necessary logic will be executed to handle the update of fields like Incident Date and Status.

Step-by-Step References:

\* Workdate Function in AL

\* Triggers in AL

## NEW QUESTION # 88

- A.
- B. Option B
- C. Option A
- D.
- E. Option C
- F.
- G.
- H. Option D

## Answer: F,H

Explanation:

To hide the field "Unit Price" from the Resource Card page in Microsoft Dynamics 365 Business Central, you need to modify the visibility property of the field using the modify keyword, which allows you to change the properties of an existing field on a page. `modify("Unit Price")` is the correct way to target an existing field on a page (like the Resource Card page).

The line `Visible = false;` makes the field invisible on the page.

Here's a breakdown of why each option is right or wrong:

Option A:

Uses `addlast("Unit Price")`, which is incorrect because you are not adding a new field; you're modifying an existing one. Also, `Visible = false` is correct for hiding a field, but the wrong method (`addlast`) is used.

Option B:

Uses `modify("Unit Price")` with `Enabled = false;`. This would disable the field (make it non-editable), not hide it. The field would still be visible, so this does not meet the requirement.

Option C:

Uses `addlast("Unit Price")`, which is incorrect, and `Enabled = false;`, which would disable the field, not hide it.

Option D:

`modify("Unit Price") { Visible = false; }` is the correct syntax for hiding the field on the page.

Correct Code Snippet:

```
modify("Unit Price")
{
Visible = false;
}
```

This hides the "Unit Price" field from the Resource Card page.

## NEW QUESTION # 89

You are writing a procedure to block all inventory items with numbers that do not start with the letter S.

You need to complete the procedure.

How should you complete the code expressions? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

## Answer:

Explanation:

## NEW QUESTION # 90

You create an 'AddItemsToJson' procedure and publish it.

The procedure fails to run.

You need to fix the errors in the code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

## Answer:

Explanation:

Explanation:

\* In line 13, replace the Add method with Insert. = NO

\* In line 15, replace the WriteTo method with ReadFrom = NO

\* Change the ItemObject variable type from JsonObject to JsonToken. = NO

\* Move line 08 in the beginning of REPEAT .. UNTIL. = YES

The provided code is intended to serialize a list of items from the Item table into a JSON array format. Here is a breakdown of the code and the necessary corrections:

\* In line 13, "ItemsArray.Add(ItemObject)": This line is correctly using the Add method to add the ItemObject to the ItemsArray. The Add method is the correct method to use for adding items to a JsonArray. Therefore, there is no need to replace Add with Insert.

\* In line 15, "ItemsArray.WriteTo(RequestText)": The WriteTo method is used correctly to serialize the ItemsArray into a JSON formatted string and store it in the RequestText variable. The ReadFrom method is used for the opposite operation, i.e., to deserialize a JSON formatted string into a JsonArray, which is not the goal in this context. Hence, no change is needed here.

\* Change the ItemObject variable type from JsonObject to JsonToken: The ItemObject variable is intended to hold JSON objects

representing individual items, making JsonObject the appropriate type.

JsonToken is not a type used in this context within AL for Business Central, and thus the variable type should remain as JsonObject.

\* Move line 08, "Clear(ManagedObject)": This line should be moved inside the repeat loop to ensure that the ManagedObject is cleared for each item in the loop. Placing it before the repeat would only clear it once before the loop starts, which could lead to incorrect serialization as the previous item's properties would not be cleared from the ManagedObject.

The logic for serializing records into JSON is a common operation when interfacing with APIs or web services in Business Central, and the pattern shown in the code is typical for such operations.

## NEW QUESTION # 91

.....

Our MB-820 study materials have three versions which are versions of PDF, Software/PC, and APP/Online. Each format has distinct strength and shortcomings. We have printable PDF format that you can study our MB-820 training engine anywhere and anytime since it is printable. We also have installable Software version which is equipped with simulated real exam environment. And the APP online version of our MB-820 Exam Dumps can support all kinds of electronic devices.
