Customizable CheckPoint 156-836 Practice Exam Software

Our 156-836 exam torrents can pacify your worries and even help you successfully pass it. The shortage of necessary knowledge of the exam may make you waver, while the abundance of our 156-836 study materials can boost your confidence increasingly. Besides, considering the current status of practice materials market based on exam candidates' demand, we only add concentrated points into our 156-836 Exam tool to save time and cost for you.

Checkpoint 156-836 is a certification exam that validates the expertise of IT professionals in managing and deploying Check Point Maestro. 156-836 exam is designed to test the knowledge and skills needed to manage and troubleshoot complex networks using Check Point Maestro. Check Point Certified Maestro Expert - R81 (CCME) certification is ideal for network administrators, engineers, and security professionals who want to demonstrate their proficiency in handling Check Point Maestro.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q18-Q23):

NEW QUESTION # 18
What is an uplink interface used for?

- A. To connect in between Orchestrators

- B. To connect appliances to customer's infrastructure
- C. To connect Orchestrators to customer's infrastructure
- D. To connect in between appliances

Answer: C

Explanation:
Explanation
Uplink interfaces are used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. They are also used to send and receive management and control traffic from the customer's network to the MHOs.

NEW QUESTION # 19
Which distribution mode assigns packets to an SGM based solely on the packet destination IP?

- A. Manual mode
- B. Auto-topology mode
- C. User mode
- D. Network mode

Answer: D

Explanation:
Network mode is the distribution mode that assigns packets to an SGM based solely on the packet destination IP. In this mode, the Orchestrator uses a hash function to map each destination IP to a specific SGM. This mode ensures that all packets with the same destination IP are processed by the same SGM, regardless of the source IP or port. This mode is suitable for scenarios where the destination IP is the main factor for load balancing, such as NAT or VPN.

NEW QUESTION # 20
What is the purpose of interface bonding?

- A. For load sharing which increases connection throughput above that which is possible using one physical interface.
- B. A bond interface can be configured for high availability redundancy.
- C. A bond interface is used for passing synchronization traffic between the SGMs.
- D. A bond interface can be configured for high availability redundancy or for load sharing which increases connection throughput above that which is possible using one physical interface.

Answer: D

NEW QUESTION # 21
Where should sx_api_ports_dump.py command be ran?

- A. Management server
- B. Orchestrator
- C. Security Group
- D. SMO Appliance

Answer: B

Explanation:

Explanation

The sx_api_ports_dump.py command should be run on the Orchestrator, which is the device that manages the communication and the configuration of the Security Groups and the SGMs. The command shows the port mapping and the traffic distribution for each Security Group, as well as the backplane bonds and the Orchestrator ports. The command does not work on the Management server, the Security Group, or the SMO Appliance, as they do not have the same role and functionality as the Orchestrator.

NEW QUESTION # 22

What will happen in case of NAT of the traffic passing through Management network?

- A. This traffic will pass with no inspection
- B. Since Management traffic is always going to SMO, it will take a care for Correction Layer and will re- distribute traffic to other Appliances
- C. This traffic will not pass correction, since it will be dropped
- D. Orchestrator will disable NAT and traffic will pass with no issue

Answer: D

Explanation:

According to the Check Point MAESTRO R80.20SP Administration Manual1, NAT is not supported on the management network. If you configure NAT on the management network, the Orchestrator will disable NAT and allow the traffic to pass without translation. This is to ensure that the management traffic can reach the Security Group members and the SmartConsole without any issues.
