Cisco 400-007 Cisco Certified Design Expert (CCDE v3.0) Written Exam 2

## 400-007日本語試験対策、400-007試験過去問

IT業界の一人としてIT領域の現状をよく知っているのでしょうか？現在のIT業界でCiscoの資格認証はますます重要になっています。多くの人は400-007試験に悩んでいます。あなたもその中の一人かもしれません。試験に迅速に合格する方法を探していますか？我々の400-007資料を試しましょう。無料のサンプルを提供して、あなたはダウンロードして試すことができます。あなたの要求を満たすなら、弊社の400-007参考書を利用してください。

Cisco 400-007試験は、90～110問の多肢選択問題から成る筆記試験であり、試験時間は120分です。候補者は、ネットワーク設計方法論、ネットワークインフラストラクチャとサービス、およびネットワークセキュリティの知識と理解を証明する必要があります。試験はまた、スケーラビリティ、可用性、およびパフォーマンスなどの要因を考慮して、ビジネス要件を満たすネットワークソリューションを設計する能力を評価します。

### Cisco Certified Design Expert (CCDE v3.0) Written Exam 認定 400-007 試験問題 (Q182-Q187):

質問 # 182  
Which two features control multicast traffic in a VLAN environment? (Choose two)

- A. MLD snooping
- B. PIM snooping
- C. pruning
- D. IGMP snooping
- E. RGMP

正解 ☒ A ☒ D

質問 # 183  
A small organization of 20 employees is looking to deliver a network design service for modernizing customer networks to support advanced solutions.  
\* Project scope and weekly progress should be visualized by the management.  
\* Always consider feedback and make changes accordingly during the project.  
\* Should consider flexibility to change scope at the point of time.  
Which project methodology meets the requirements and have the least impact on the outcome?

- A. Six-Sigma
- B. Scrum
- C. Kanban
- D. LEAN

正解 ☒ B

解説:  
<https://firebrand.training/uk/blog/scrum-vs-six-sigma-which-one-is-right-for-you>

質問 # 184  
A key to maintaining a highly available network is building in the appropriate redundancy to protect

高品質Cisco 400-007ハイパスレートの400-007本拠試験 | 試験の準備方法Cisco Certified Design Expert (CCDE v3.0) Written Exam日本語試験対策

ArcherのArcher-Expert認定試験は業界で広く認証されたIT認定です。世界各地の人々はArcherのArcher-Expert認定試験が好きです。この認証は自分のキャリアを強化することができ、自分が成功に近づかせますから。ArcherのArcher-Expert試験と言ったら、JapancertのArcherのArcher-Expert試験トレーニング資料はずっとほかのサイトを先んじているのは、JapancertにはIT領域のエリートが組み立てられた強い団体がありますから。その団体はいつでも最新のArcher Archer-Expert試験トレーニング資料を追跡していて、彼らのプロな心を持って、ずっと試験トレーニング資料の研究に力を尽くしています。

なにごとによらず初手は難しいです、どのようにArcher Archer-Expert試験への復習を始めて悩んでいますか。我々のArcher Archer-Expert問題集を購入するのはあなたの試験に準備する第一歩です。我々の提供するArcher Archer-Expert問題集はあなたの需要に満足できるだけでなく、試験に合格する必要があることです。あなたはまだ躊躇しているなら、JapancertのArcher-Expert問題集デモを参考しましょう。

認定する-更新するArcher-Expert PDF試験-試験の準備方法Archer-Expert最新試験情報

これは、今後の Archer-Expert テストのために有効な試験準備資料を購入する良い方法です。適切な選択により、半分の労力で2倍の結果が得られます。適切な試験準備により、明確な方向性が示され、効率的な準備ができます。Archer-Expert 試験の準備は正しい方向を示すだけでなく、実際の試験問題のほとんどをカバーできるため、試験の内容を事前に知ることができます。Archer Archer-Expert 試験準備の質問と回答をマスターし、試験気分を積極的に調整することもできます。

## Archer Certified Administrator-Expert 認定 Archer-Expert 試験問題 (Q31-Q36):

### 質問 # 31

Which service must be installed and enabled on all Web and Services Servers?

- **A. Archer Configuration Service**
- B. Archer Core Service
- C. Archer Queuing Service
- D. Archer Workflow Service

正解: A

解説:

In a distributed (multi-host) Archer environment, the Archer Configuration Service is the most critical underlying component that must exist on every server in the web and services tiers. As taught in Archer Administration II, this service is responsible for "registering" the server with the Archer Control Panel (ACP).

The Configuration Service allows the central ACP to communicate with each node in the cluster to manage settings, update the nlog.config files, and ensure that all servers are using the correct database connection strings. While the Queuing Service (Option C) might only reside on the Services server, and the Workflow Service (Option B) is specific to AWF tasks, the Configuration Service is the "heartbeat" that connects any given Archer server to the instance's central management framework. If this service is stopped on a web server, that server will effectively become "orphaned" and will not be able to process user requests correctly or receive updates from the ACP.

### 質問 # 32

What action should never be completed using the Advanced Workflow Job Troubleshooting tool?

- A. Restarting a job.
- **B. Editing the Advanced Workflow.**
- C. Manually moving a record to the next node.
- D. Canceling a job.

正解: B

解説:

The Advanced Workflow Job Troubleshooting tool is a runtime utility designed to manage individual "instances" of records currently enrolled in a workflow. It is used to fix records that are stuck due to errors.

According to the Advanced Workflow Beyond the Basics guide, this tool is purely for operational maintenance (Cancel, Reset, Restart, or "Force" movement).

Editing the Advanced Workflow structure (changing the flowchart, adding nodes, or modifying logic) cannot be done within the Troubleshooting tool. Workflow design changes must be made in the Application Builder under the Workflow tab. Attempting to "fix" a logic error by changing the design is a development task, whereas the Troubleshooting tool is an administrative task for existing data. Furthermore, editing a workflow requires saving a new version and potentially migrating active jobs, a process entirely separate from the record-level "Reset/Cancel" functions found in the Job Troubleshooting interface.

### 質問 # 33

If a Data Feed is stuck in the status of "Pending", which service should you check first to troubleshoot the issue?

- A. Configuration service
- **B. Job Engine service**
- C. Indexing service
- D. Queuing service

正解: B

解説:

In modern Archer environments (post-version 6.x), the Archer Job Engine Service is the primary service responsible for executing asynchronous tasks, including Data Feeds. When a Data Feed is initiated, it is placed in the queue. If the status remains "Pending," it indicates that the task has been recognized by the database, but no service has "picked it up" to begin processing.

As detailed in the Archer Administration II troubleshooting modules, the Job Engine is the "worker" that handles these requests. If this service is stopped, paused, or stuck on the application server, all scheduled and manual feeds will remain in a "Pending" state indefinitely. While the Queuing Service (Option D) is involved in the initial placement of the task, the actual execution and the transition out of "Pending" into "In Progress" is the responsibility of the Job Engine. The Indexing Service (Option C) handles search keyword indexing and is unrelated to data feed execution.

#### 質問 # 34

When a new Question Library record is added, there are several fields required. Information such as question type and display format are needed for which of the following reasons?

- A. These details will impact the display of each Question Library record in View status.
- B. These details tell the Archer platform what type of field needs to be built for each question when a Questionnaire is created.
- C. These details are used as a baseline to determine how much space will be required on the server to support Questionnaires that leverage these records.
- D. These details are used to ensure an organization does not go beyond the record number limit included with their chosen support level.

正解: B

解説:

In the Questionnaires and Assessment Maintenance curriculum, the Question Library acts as a "blueprint" for the final assessment. When you add a record to the Library, you aren't just adding text; you are defining the metadata for a future field.

The Question Type (e.g., Numeric, Values List, Text) and Display Format (e.g., Radio Buttons vs.

Dropdown) are mandatory because they tell the Archer platform how to dynamically generate the user interface when a Questionnaire is launched. When a target record is created from a template, Archer looks at these library fields to determine which database column types to use and how the web browser should render the interaction. Without this information, the system would not know whether to provide a text box for a comment or a list of "Yes/No" options for the respondent.

#### 質問 # 35

Which API(s) are capable of running Archer reports?

- A. All of the Archer APIs
- B. RESTful API
- C. SOAP API
- D. Content API

正解: C

解説:

While Archer has been aggressively moving toward the RESTful API (Option C) for modern integrations, the ability to execute an existing Archer Report and retrieve the results has historically been a core function of the SOAP API (Web Services). Specifically, the SearchSvc (Search Service) within the SOAP API includes the ExecuteSearch and SearchRecordsByReport methods.

According to the Archer Administration II technical integration documents, the RESTful API is primarily designed for CRUD operations (Create, Read, Update, Delete) on individual records and metadata. While newer versions of the REST API are expanding, the legacy SOAP Web Services remain the primary, verified method for triggering a pre-defined "Saved Report" via an external call. The Content API (Option D) is a subset of the RESTful API focused on record data but lacks the high-level report execution engine found in the SOAP services.
