We sincerely hope that our Terraform-Associate-003 study materials will help you achieve your dream.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q159-Q164):

NEW QUESTION # 159

Which of the following methods, used to provision resources into a public cloud, demonstrates the concept of infrastructure as code?

- A. A sequence of REST requests you pass to a public cloud API endpoint Most Voted
- **B. A script that contains a series of public cloud CLI commands**
- C. curl commands manually run from a terminal
- D. A series of commands you enter into a public cloud console

Answer: B

Explanation:

Explanation

The concept of infrastructure as code (IaC) is to define and manage infrastructure using code, rather than manual processes or GUI tools. A script that contains a series of public cloud CLI commands is an example of IaC, because it uses code to provision resources into a public cloud. The other options are not examples of IaC, because they involve manual or interactive actions, such as running curl commands, sending REST requests, or entering commands into a console. References = [Introduction to Infrastructure as Code with Terraform] and [Infrastructure as Code]

NEW QUESTION # 160

You have multiple team members collaborating on infrastructure as code (IaC) using Terraform, and want to apply formatting standards for readability.

How can you format Terraform HCL (HashiCorp Configuration Language) code according to standard Terraform style convention?

- **A. Run the terraform fmt command during the code linting phase of your CI/CD process Most Voted**
- B. Write a shell script to transform Terraform files using tools such as AWK, Python, and sed
- C. Designate one person in each team to review and format everyone's code
- D. Manually apply two spaces indentation and align equal sign "=" characters in every Terraform file (*.tf)

Answer: A

Explanation:

The terraform fmt command is used to rewrite Terraform configuration files to a canonical format and style. This command applies a subset of the Terraform language style conventions, along with other minor adjustments for readability. Running this command on your configuration files before committing them to source control can help ensure consistency of style between different Terraform codebases, and can also make diffs easier to read. You can also use the -check and -diff options to check if the files are formatted and display the formatting changes respectively². Running the terraform fmt command during the code linting phase of your CI/CD process can help automate this process and enforce the formatting standards for your team. Reference = [Command: fmt]²

NEW QUESTION # 161

Which of the following is not a valid string function in Terraform?

- A. slice
- B. Split
- **C. choaf**
- D. join

Answer: C

Explanation:

Explanation

This is not a valid string function in Terraform. The other options are valid string functions that can manipulate strings in various ways².

NEW QUESTION # 162

You can configure Terraform to log to a file using the TF_LOG environment variable.

- **A. True**
- B. False

Answer: A

Explanation:

You can configure Terraform to log to a file using the TF_LOG environment variable. This variable can be set to one of the log levels: TRACE, DEBUG, INFO, WARN or ERROR. You can also use the TF_LOG_PATH environment variable to specify a custom log file location. Reference = : Debugging Terraform

NEW QUESTION # 163

What information does the public Terraform Module Registry automatically expose about published modules?

- A. All of the above
- B. Outputs
- C. Optional inputs variables and default values
- D. Required input variables
- E. None of the above

Answer: A

Explanation:

The public Terraform Module Registry automatically exposes all the information about published modules, including required input variables, optional input variables and default values, and outputs. This helps users to understand how to use and configure the modules.

NEW QUESTION # 164

.....
