

# C-DBADM-2601 Dumps Torrent & C-DBADM-2601 Practice Questions & C-DBADM-2601 Exam Guide

Our C-DBADM-2601 exam materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained? Therefore, we get the test C-DBADM-2601 Certification and obtain the qualification certificate to become a quantitative standard, and our C-DBADM-2601 learning guide can help you to prove yourself the fastest in a very short period of time.

When preparing for the C-DBADM-2601 exam, a good source of information is what candidates need most, and the price of the materials is one of the important factors to be considered when a candidate choosing. In contrast to most exam preparation materials available online, our C-DBADM-2601 exam materials of Real4dumps can be obtained at a reasonable price so that each candidate who prepares to take the C-DBADM-2601 exam can afford it. It will not let any one of the candidates be worried about the price issue, and its quality and advantages exceed all our competitors' similar products. We will never reduce the quality of our C-DBADM-2601 Exam Questions because the price is easy to bear by candidates and the quality of our exam questions will not let you down. They will prove the best choice for your time and money.

## Latest C-DBADM-2601 Dumps Questions | C-DBADM-2601 Real Testing Environment

For busy candidates who want to study for the SAP Certified - Database Administrator - SAP HANA exam on the go via their smartphones, laptops, or tablets, our updated SAP C-DBADM-2601 PDF Questions are excellent. Because the PDF file of the latest questions is portable, you can prepare for the C-DBADM-2601 Exam via a smart device whenever and wherever you like. Additionally, exam PDF questions are printable. You can print these C-DBADM-2601 exam questions to study when you don't have access to a smart device.

## SAP Certified - Database Administrator - SAP HANA Sample Questions (Q129-Q134):

### NEW QUESTION # 129

#### CHALLENGE 1 - Template Configuration Record Alignment

The remediation coordinator wants to release the template because sales-margin reports return results from both the upgraded central system and the newly installed database. The administration records do not yet confirm that both systems use the intended configuration state. Which decision best supports release readiness?

- A. Release the template and document configuration differences only if users report delays.
- B. Use the SAP HANA Cloud provisioning record to complete the missing template evidence.
- C. Release the template because report results confirm the databases are usable.
- **D. Confirm aligned configuration records before using report results as release evidence.**

**Answer: D**

Explanation:

Feedback:

Aligned configuration records should be confirmed before report results are used as release evidence. The remediation decision depends on whether the template reflects documented SAP HANA states, not only report availability.

### NEW QUESTION # 130

A consumer goods company runs SAP HANA for daily operational dashboards in a mixed landscape. The database remains available, but SAP HANA cockpit shows repeated alert notifications for disk usage growth in a data volume. The administrator checks recent workload activity and confirms that dashboard execution still completes successfully. A support analyst proposes acknowledging the alerts because no user-facing outage has occurred.

The constraint is that the administrator must prevent the monitoring artifact from becoming an execution-impacting condition while avoiding unnecessary database restart activity during business hours. The operations manager needs evidence that the alert is being handled at the correct system layer before the next reporting cycle begins.

Which action best addresses the monitoring condition?

- **A. Investigate volume growth and related workload activity, correct the capacity condition, and validate that the alert state clears.**
- B. Acknowledge the alert and wait for user reports because dashboard execution currently completes successfully.
- C. Increase the alert threshold so the current warning no longer appears during normal dashboard execution.
- D. Restart the database so disk usage indicators refresh before the next reporting cycle begins.

**Answer: A**

Explanation:

Feedback:

This acts at the operational resource layer indicated by the alert artifact. Reviewing growth behavior, correcting the capacity condition, and validating alert clearance confirms that monitoring, resource state, and execution readiness are aligned before the next reporting cycle.

### NEW QUESTION # 131

#### CHALLENGE 3 - Cloud Migration Readiness Separation

The modernization lead wants the SAP HANA Cloud database included in the same release readiness status because it is provisioned and has a limited activation dataset. The cloud environment has not completed the startup, monitoring, or recovery evidence package used for active UAT systems. What is the best response?

- **A. Keep cloud migration evidence separate until cloud-specific administration validation is completed.**
- B. Use the upgraded reporting system's monitoring record as the SAP HANA Cloud readiness record.
- C. Stop cloud planning until the current UAT release decision is fully completed.
- D. Include the cloud database in the same status because provisioning and limited data show progress.

**Answer: A**

Explanation:

Feedback:

Cloud migration evidence should remain separate until cloud-specific administration validation is completed. Provisioning and limited data support planning, but they do not equal active UAT release readiness.

### NEW QUESTION # 132

A regional logistics provider is preparing an incremental move from an on-premises SAP HANA reporting database to SAP HANA Cloud. The migration worksheet lists selected reporting objects as ready, but a compatibility review note is missing for one object group. The project manager wants to start migration activities because the object count is small and the target cloud environment is available.

The constraint is that the migration must avoid moving objects whose readiness has not been validated. The administrator must support modernization progress without converting incomplete compatibility evidence into an execution decision.

What should the administrator do before approving the migration step?

- A. Approve the migration because the SAP HANA Cloud target environment is already available.
- **B. Complete the missing compatibility review for the object group and approve only the objects with validated readiness evidence.**
- C. Move all listed reporting objects and resolve compatibility gaps after the first cloud validation run.
- D. Remove the object group without review so the migration can proceed with a smaller scope.

**Answer: B**

Explanation:

Feedback:

This resolves the readiness gap at the migration validation layer. Completing the compatibility review links source object selection, readiness evidence, target preparation, and controlled migration approval.

### NEW QUESTION # 133

CHALLENGE 1 - Recovery Review Configuration Traceability

The recovery review coordinator wants to accept the comparison because patient-flow reports opened successfully. The database team later confirms that the upgraded reporting system's administration record does not reflect the configuration state used during testing. Which decision best supports readiness-quality evidence?

- A. Replace the upgraded system record with the SAP HANA Cloud provisioning record.
- **B. Update the administration record and reassess the readiness comparison against the confirmed state.**
- C. Treat the missing configuration evidence as unrelated because the review focuses on report access.
- D. Use the comparison because report opening is sufficient evidence for operational sign-off.

**Answer: B**

Explanation:

Feedback:

The administration record should be updated and the readiness comparison reassessed against the confirmed state. This preserves the dependency between configuration evidence and the reporting conclusion used for operational sign-off.

### NEW QUESTION # 134

.....

If you buy our C-DBADM-2601 exam questions, we will offer you high quality products and perfect after service just as in the past. We believe our consummate after-sale service system will make our customers feel the most satisfactory. Our company has designed the perfect after sale service system for these people who buy our C-DBADM-2601 practice materials. We can promise that we will provide you with quality C-DBADM-2601 training braindump, reasonable price and professional after sale service. As long as you have problem on our C-DBADM-2601 exam questions, you can contact us at any time.
