APICS Certified in Planning and Inventory Management (CPIM 8.0) Sample Questions (Q158-Q163):

NEW QUESTION # 158

An organization is preparing to deploy Multi-Factor Authentication (MFA) to its workforce. The primary concerns of the organization are cost and security. The organization realizes that their entire workforce has computers and smartphones. Which of the following is BEST suited to address the organization's concerns?

- A. Hard token
- B. Short Message Service (SMS)
- C. Personal Identification Number (PIN) code
- **D. Soft token**

Answer: D

NEW QUESTION # 159

An organization has been the subject of increasingly sophisticated phishing campaigns in recent months and has detected unauthorized access attempts against its Virtual Private Network (VPN) concentrators. Which of the following implementations would have the GREATEST impact on reducing the risk of credential compromise?

- A. Implementing advanced endpoint protection on user endpoints
- **B. Implementing Multi-Factor Authentication (MFA)**
- C. Increasing the network password complexity requirements
- D. Implementing tougher encryption on the VPN

Answer: B

NEW QUESTION # 160

In which of the following phases of the product life cycle is product price most effective in influencing demand?

- A. Decline
- B. Maturity
- **C. Introduction**
- D. Growth

Answer: C

Explanation:

Product price is most effective in influencing demand in the introduction phase of the product life cycle, when the product is new and unfamiliar to the market. In this phase, customers are not aware of the product's benefits, features, or quality, and may be reluctant to try it. Therefore, a lower price can help attract customers and stimulate demand, as well as deter potential competitors from entering the market. A lower price can also help the product gain market share and establish a loyal customer base. As the product moves to the growth, maturity, and decline phases, price becomes less effective in influencing demand, as other factors, such as product differentiation, quality, promotion, and customer satisfaction, become more important. - A. Contact the Identity And Access Management (IAM) team to remove the user from the network.
- **B. Contact the data owner to confirm the transfer was authorized.**
- C. Contact the network security team to block the traffic.
- D. Contact the CSP to validate data access controls in the cloud.

Answer: B

NEW QUESTION # 162

Which of the following is the fundamental difference between finite loading and other capacity planning approaches?

- **A. It considers adjustments to plans based on planned capacity utilization.**
- B. It is highly dependent on advanced computer software to function effectively.
- C. It is only managed by shop floor supervisors.
- D. It can use historical information to drive decision-making processes.

Answer: A

Explanation:

Finite loading is a capacity planning approach that takes into account the available capacity of the resources and does not allow overloading. It considers adjustments to plans based on planned capacity utilization, which means that it can change the start or end dates of the operations to avoid exceeding the capacity limits. This way, finite loading ensures that the production schedule is realistic and feasible. Other capacity planning approaches, such as infinite loading, do not consider adjustments to plans based on planned capacity utilization. Infinite loading ignores the capacity constraints and schedules the operations based on the due dates and the lead times, regardless of the resource availability. This may result in overloading the resources and causing delays or disruptions in the production process. Therefore, the fundamental difference between finite loading and other capacity planning approaches is that finite loading considers adjustments to plans based on planned capacity utilization, while other approaches do not.
