## Certification 156-836 Test Answers, Latest 156-836 Test Questions

Test4Sure has a professional team of IT experts and certified trainers who written the 156-836 exam questions and valid exam prep according to the actual test. You can download the CheckPoint free demo before you purchase. If you bought our 156-836 Exam PDF, you will be allowed to free update your dumps one-year. You just need to spend one or two days to practice questions and remember answers.

Earning the CCME certification is a great way to demonstrate your expertise in Check Point's advanced security solutions and enhance your career prospects. Check Point Certified Maestro Expert - R81 (CCME) certification is highly valued in the IT industry and is recognized by top organizations worldwide. By passing the CCME exam, you'll gain a deep understanding of Check Point Maestro and the skills needed to deploy, manage, and troubleshoot complex security infrastructures, making you a highly sought-after professional in the field of cybersecurity.

The Check Point Certified Maestro Expert - R81 (CCME) exam is the latest version of the certification, which is based on the latest release of Check Point Maestro. 156-836 Exam is designed to test the candidate's ability to plan, deploy, and manage Maestro networks of all sizes, and to troubleshoot issues that may arise during the operation of these networks.

The Check Point Maestro platform is a network security solution that provides organizations with the ability to manage large-scale

security infrastructures. It allows organizations to scale their security infrastructures as their needs grow, without having to add additional hardware or software. The platform provides centralized management, seamless deployment, and granular control over security policies, making it an ideal solution for large enterprises and service providers.

## CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q27-Q32):

### NEW QUESTION # 27

The \_\_\_\_\_ command will allow users to update the specified file on all SGMs.

- A. g\_cat
- B. g\_update\_conf\_file
- C. g\_all"
- D. sed

### Answer: B

Explanation:

The g\_update\_conf\_file command is a global command that allows users to update the specified file on all Security Group Members of the current Security Group. The command takes the file name and the parameter- value pair as arguments and updates the file accordingly. For example, g\_update\_conf\_file fwkern.conf fwha\_enable\_arp=1 will add or modify the fwha\_enable\_arp parameter in the fwkern.conf file on all SGMs.

### NEW QUESTION # 28

What is HealthCheck Point?

- A. Performs a system health check and is meant to replace both a CPInfo and the health check script.
- B. Is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system.
- C. Is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of critical and informative events that might have occurred in a production system.
- D. Can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.

### Answer: A

Explanation:

HealthCheck Point (HCP) is a tool designed to perform a comprehensive system health check for the Maestro environment. It is intended to replace both the CPInfo tool and traditional health check scripts by providing a streamlined way to assess the health of Maestro Orchestrators (MHOs) and Security Group Members (SGMs).

HCP evaluates system status, configuration, and potential issues, generating detailed reports for troubleshooting and maintenance. Exact Extract:

"HealthCheck Point (HCP) performs a system health check and is meant to replace both a CPInfo and the health check script. It assesses the health of the Maestro environment, including MHOs and SGMs, by checking system status, configuration settings, and potential issues. HCP provides detailed reports to aid in troubleshooting and maintenance."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 4: Using the Command Line Interface and WebUI, Lesson 4.4: System Diagnostics, page 4-15

-Check Point R81 Maestro Administration Guide, Chapter 4: Using the Command Line Interface and WebUI, Section: HealthCheck Point, page 4-12 Explanation of Options:

\* A. Is a self-updatable suite of tools for MHOs...: Incorrect, as HCP is not limited to MHOs and does not focus on visualizing topology or event timelines. It is a general health check tool for the entire Maestro environment.

\* B. Performs a system health check and is meant to replace both a CPInfo and the health check script:

Correct, as HCP's primary function is to perform system health checks, replacing CPInfo and health check scripts, as per the documentation.

\* C. Can be used to let you visualize the Firewall topology...: Incorrect, as HCP does not provide visualization of firewall topology or live statistics like throughput and CPU utilization.

\* D. Is a self-updatable suite of tools for SGMs....: Incorrect, as HCP is not exclusive to SGMS and does not include topology visualization or event timeline features.

## NEW QUESTION # 29

For the MHO-175, which ports are Management ports?

- A. Ports 1 - 4 are Management ports.
- B. Ports 49 - 55 are Management ports.
- C. Ports 27 - 47 are Management ports.
- D. Ports 5 - 26 are Management ports.

**Answer: A**

Explanation:

Explanation

According to the Port Mapping for the Check Point Maestro HyperScale Orchestrator MHO-175 document1, ports 1 - 4 are Management ports that are used to connect the MHO to the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. Ports 5 - 26 are Uplink ports that are used to connect the MHO to the customer's network infrastructure, such as switches, routers, or firewalls. Ports 27 -

47 are Downlink ports that are used to connect the MHO to the Security Group Modules (SGMs) in the Security Group. Ports 49 - 55 are Backplane ports that are used to connect the MHO to another MHO in a Dual Orchestrator environment.

## NEW QUESTION # 31

A splitter cannot be used:

- A. To connect a single port on an Appliance to multiple ports on the Orchestrator
- B. To connect a single port on an Orchestrator to multiple ports on an external switch
- C. To connect a single port on an Orchestrator to the same Appliance
- D. To connect a single port on an Orchestrator to multiple Appliances

**Answer: C**

#### Explanation:

In a Check Point Maestro environment, a splitter is used to divide a single high-speed port (e.g., QSFP or QSFP28) into multiple lower-speed ports (e.g., SFP or SFP+). However, a splitter cannot be used to connect a single port on an Orchestrator to the same Appliance, as this would not align with the purpose of a splitter, which is to expand connectivity to multiple devices or ports, not to loop back to a single device.

#### Exact Extract:

"A splitter is used to divide a single high-speed port on the Orchestrator (e.g., QSFP or QSFP28) into multiple lower-speed ports (e.g., SFP or SFP+). Splitters are typically used to connect a single Orchestrator port to multiple ports on an external switch or to multiple Appliances. However, a splitter cannot be used to connect a single Orchestrator port to the same Appliance, as this does not align with the splitter's purpose of expanding connectivity."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 3: Dual Orchestrator Environment, Lesson 3.2: Connectivity Options, page 3-10

-Check Point R81 Maestro Administration Guide, Chapter 3: Working with Security Group Modules, Section: Connectivity, page 3-10 Explanation of Options:

\* A. To connect a single port on an Orchestrator to the same Appliance: Correct, as a splitter is not designed for this purpose and cannot be used to connect an Orchestrator port to a single Appliance.

\* B. To connect a single port on an Orchestrator to multiple ports on an external switch: Incorrect, as this is a valid use case for a splitter.

\* C. To connect a single port on an Appliance to multiple ports on the Orchestrator: Incorrect, as splitters can be used in configurations where an Appliance connects to multiple Orchestrator ports.

\* D. To connect a single port on an Orchestrator to multiple Appliances: Incorrect, as this is another valid use case for a splitter.
