Cisco Designing Cisco Security Infrastructure Sample Questions (Q11-Q16):

NEW QUESTION # 11

An engineering company's Chief Financial Officer recently fall victim to a phishing scam by responding to an urgent email. The mail appeared to be from a trusted business partner, and it requested sensitive tax information. The incident led to significant financial and reputational damage. To prevent similar occurrences in the future, the security team must implement an effective mitigation strategy. Which mitigation strategy must the security team implement to prevent similar occurrences in the future?

- A. targeted education campaign
- B. granular port security strategy
- C. upstream traffic filter
- D. data loss prevention strategy

Answer: A

Explanation:

A targeted education campaign directly addresses phishing by training employees, especially high-value targets like executives, to recognize social engineering attempts. While technical controls help, phishing primarily exploits human behavior, so awareness and training are the most effective preventive measures.

NEW QUESTION # 12

How does a SOC leverage flow collectors?

- A. It provides data for analysis in threat detection and response system
- B. It performs load balancing capabilities across systems to optimize performance.
- C. It performs data backup and recovery.
- D. It provides real time content filtering.

Answer: A

Explanation:

A flow collector gathers metadata about network traffic (such as NetFlow or IPFIX), which SOC analysts use to analyze communication patterns. This data is critical for threat detection and response, helping identify anomalies, lateral movement, or potential attacks.

NEW QUESTION # 13

A video game company identified a potential threat of a SYN flood attack, which could disrupt the online gaming services and impact user experience. The attack can overwhelm network resources by exploiting the TCP handshake process, leading to server unavailability and degraded performance. To safeguard the company's infrastructure and ensure uninterrupted service, it is essential to enhance the security measures in place. The company must implement a solution that manages and mitigates the risk of such network-based attacks. Which security product must be implemented to mitigate similar risks?

- A. Cisco Secure Endpoint
- B. Cisco Umbrella
- C. Cisco Web Security Appliance
- D. Cisco Secure Firewall

Answer: D

Explanation:

A SYN flood attack is a type of DoS/DDoS attack targeting the TCP handshake process. The correct mitigation is deploying a Cisco Secure Firewall, which includes advanced intrusion prevention, SYN flood protection, and traffic management capabilities to prevent resource exhaustion and keep services available.

NEW QUESTION # 14

A restaurant distribution center recently suffered a password spray attack targeting the Cisco Secure Firepower Threat Defense VPN headend. The attack attempts to gain unauthorized access by trying common passwords across many accounts. The attack poses a significant security threat to the organization's remote access infrastructure. To enhance the security of VPN setup and minimize the risk of similar attacks in the future, the IT security team must implement effective mitigation measures. Which technique effectively reduces the risk of this type of attack?

- A. Implement an access list to block addresses from the previous password spray attack.
- B. Disable group aliases in the connection profiles.
- C. Enable AAA authentication for the DefaultWEBVPN and DefaultRAGroup Connection Profiles.
- D. Change the AAA authentication method from RADIUS to TACACS+.

Answer: C

Explanation:

Enabling AAA authentication on the default connection profiles ensures that all VPN access attempts must go through strong authentication. This directly mitigates password spray attacks by enforcing centralized authentication controls, enabling account lockout, and supporting additional protections such as multifactor authentication.

NEW QUESTION # 15

Refer to the exhibit. A software developer noticed that the application source code had been found on the internet. To avoid such an incident from happening again, the developer applied a DLP policy to prevent from uploading source code into generative AI tool

like ChatGPT. When testing the policy, the developer noticed that it is still possible for the source code to be uploaded. Which action must the developer take to prevent this issue?

- A. Move the ChatGPT Source Code rule to the bottom.
- B. Enable the rule.
- C. Modify the data classifications.
- D. **Change the DLP action from Monitor to Block.**

Answer: D

Explanation:

In the exhibit, the ChatGPT Source Code rule is configured with the action Monitor, which only logs activity but does not stop it. To prevent source code from being uploaded, the action must be changed to Block. This enforces the policy and ensures data exfiltration into generative AI tools is stopped.
