

Pass Guaranteed Quiz 2026 FlashArray-Implementation-Specialist: Pure Storage Certified FlashArray Implementation Specialist–The Best New Dumps Files

Nowadays, there are more and more people realize the importance of FlashArray-Implementation-Specialist, because more and more enterprise more and more attention it. If someone pass the FlashArray-Implementation-Specialist exam and own relevant certificates that mean he had good grasp of this field of knowledge, that is to say, he will be popular and valued by more enterprise. In order to help most candidates who want to Pass FlashArray-Implementation-Specialist Exam, so we compiled such a study materials to make exam simply. Our FlashArray-Implementation-Specialist guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice.

Pure Storage FlashArray-Implementation-Specialist Exam Syllabus Topics:

Topic	Details
Topic 1	• Post-Installation • Upgrade: This section of the exam measures the skills of FlashArray Implementation Specialists and evaluates how professionals confirm system functionality after installation or an upgrade. It involves validating connectivity, running health checks, confirming configurations, and ensuring that the deployment meets operational expectations.
Topic 2	• Pre-Installation • Upgrade: This section of the exam measures the skills of Enterprise Infrastructure Technicians and covers all preparation activities before deploying or upgrading a Pure Storage FlashArray. It includes understanding environmental requirements, verifying prerequisites, checking compatibility, and validating system readiness through appropriate tools and documentation.
Topic 3	• Installation: This section of the exam measures the skills of Enterprise Infrastructure Technicians and focuses on executing a successful installation of FlashArray systems. It tests the ability to perform physical setup, cabling, configuration of network settings, and the application of initial system configurations necessary for full deployment.
Topic 4	• Upgrades: This section of the exam measures the skills of FlashArray Implementation Specialists and focuses on tasks involved in managing firmware and software upgrades. Candidates must demonstrate knowledge of upgrade planning, verification steps, and rollback procedures, ensuring that systems are updated with minimal disruption to service.

100% FlashArray-Implementation-Specialist Accuracy & FlashArray-Implementation-Specialist Review Guide

IT certifications are playing an important role in our career. In order to get a promotion and get more money, every IT people put more effort into their work. Instead this way, we can depend on our strength to won the boss's heart. Pure Storage FlashArray-Implementation-Specialist certification is vitally important for IT people. In fact, the test is not difficult as you have imagined it. You only need to select the appropriate training materials. EduDump Pure Storage FlashArray-Implementation-Specialist Practice Test will regularly update the exam dumps to fulfill your requirements. So, our Pure Storage FlashArray-Implementation-Specialist test is the latest. Hurry up! You will achieve your aim.

Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q122-Q127):

NEW QUESTION # 122

An Implementation Engineer is getting ready to install four DFMs into a 16-module efficiency bundle and notices that the new modules are DFMDs while the installed modules are DFMs.

What should the Implementation Engineer do to get the array using a 20-module wide write group?

- A. Insert the DFMDs into a separate swing shelf to isolate them from the DFMs.
- **B. Work with the account team to ship DFMs instead of the DFMDs.**
- C. Install the four new DFMDs and run puredrive admit.
- D. Install the four new DFMDs, run puredrive admit and have support set the tunable puretune --set allow_dfmd_in_dfm_wwg 1 < CASE > .

Answer: B

Explanation:

Understanding the strict hardware boundaries of Pure Storage capacity expansion is critical. DirectFlash Modules (DFMs) and DirectFlash Modules with Distributed NVRAM (DFMDs) are fundamentally different hardware components. Standard DFMs contain only raw NAND flash and rely entirely on centralized, dedicated NVRAM modules located in the array chassis to protect write cache. DFMDs, however, feature their own onboard non-volatile memory to distribute the cache load across the capacity drives (primarily utilized in //XL and //XR4 architectures).

Pure Storage architecture explicitly dictates that drives operating within a single efficiency bundle or Wide Write Group (WWG) must be of the exact same hardware classification to ensure predictable parity calculation, wear leveling, and cache distribution. Mixing legacy DFMs with newer DFMDs within the same

20-module write group creates a severe hardware imbalance and is a strictly unsupported configuration.

While internal engineering tunables (like those suggested in Option A) occasionally exist to force overrides in lab environments, applying them in a customer's production array to bypass physical hardware incompatibility violates all implementation best practices. The only correct and safe action for the Implementation Engineer is to halt the physical installation, flag the Bill of Materials (BOM) mismatch, and work with the account

/logistics team to RMA the DFMDs and ship the correct standard DFMs.

NEW QUESTION # 123

What are the starter configurations of DFMDs in a Gen 2 DirectFlash Shelf?

- A. 10-slot and 14-slot
- B. 8-slot and 14-slot
- **C. 12-slot and 14-slot**

Answer: C

NEW QUESTION # 124

After an Implementation Engineer installs a new FlashArray and runs health checks, they see that Phonehome and Remote Assist are NOT working correctly. Which outbound port needs to be open for all management ports (physical and virtual)?

- A. 0
- **B. 1**
- C. 2

Answer: B

Explanation:

For PhoneHome (telemetry) and Remote Assist (support tunnels) to function correctly, TCP Port 443 (HTTPS) must be open for outbound traffic from all management ports (CT0.ETH0, CT1.ETH0, and the Virtual Management IP).

Pure Storage utilizes a secure, encrypted connection to communicate with the Pure1 Cloud and Support infrastructure.

* PhoneHome: The array sends logs and heartbeat data to purestorage.com (and associated subdomains) via HTTPS over Port 443. If this port is blocked, the array cannot report its health status, preventing proactive support.

* Remote Assist: This feature creates a reverse SSH tunnel encapsulated over HTTPS (websocket or similar secure transport) to allow Pure Support to remotely log in. It initiates the connection outbound to the support relay servers on Port 443.

Option A (Port 80) is generally not used for secure management traffic in modern configurations, often only serving as a redirect.

Option C (Port 123) is required for NTP (Network Time Protocol) synchronization, which is critical for logs but is not the transport port for the PhoneHome/Remote Assist data stream itself.

Therefore, verifying firewall rules for Port 443 is the primary troubleshooting step.

NEW QUESTION # 125

Which default speed FC SFPs are shipped in FlashArray//XCR4 FC arrays?

- A. 0
- **B. 1**
- C. 2

Answer: B

Explanation:

FlashArray//XCR4 arrays are shipped with 32Gb Fibre Channel (FC) SFPs by default. These 32Gb FC SFPs are capable of supporting 64Gb speeds, which can be enabled via a firmware upgrade. This allows the array to leverage higher-speed FC connections as needed.

NEW QUESTION # 126

Prior to installing a new FlashArray controller, which terminal display settings must the Implementation Engineer configure?

- **A. 8-N-1, Xon/Xoff flow control, 115,200 baud**
- B. 8-N-1, Xon/Xoff flow control, 38,400 baud
- C. 8-E-1, Xon/Xoff flow control, 115,200 baud

Answer: A

Explanation:

Establishing a serial console session is a fundamental step for initializing a new FlashArray or troubleshooting boot issues. To successfully communicate with the FlashArray controllers via the DB9 or Micro-USB serial port, the terminal emulator (such as PuTTY or TeraTerm) must be configured with specific parameters.

The verified standard settings for all modern FlashArray controllers are:

Baud Rate: 115,200 (This is faster than the legacy 9600 standard used on older network gear).

Data Bits: 8

Parity: None (N)

Stop Bits: 1

Flow Control: Xon/Xoff (Software flow control is preferred over hardware RTS/CTS).

Configuring these settings incorrectly (e.g., wrong baud rate) will result in garbled text ("garbage characters") or a completely blank screen when connecting to the console, preventing the engineer from running the puresetup initialization script.

NEW QUESTION # 127

.....

You can use FlashArray-Implementation-Specialist guide materials through a variety of electronic devices. At home, you can use the computer and outside you can also use the phone. Now that more people are using mobile phones to learn our FlashArray-Implementation-Specialist study guide, you can also choose the one you like. We have three versions of our FlashArray-Implementation-Specialist Exam Brindumps: the PDF, the Software and the APP online. And you can free download the demo s to check it out.
