The Abdomen Sonography Examination can advance your professional standing. Passing the ARDMS AB-Abdomen exam is the requirement to become ARDMS Professionals and to get your name included. Practicing with ARDMS AB-Abdomen Dumps is considered the best strategy to test the exam readiness. After passing the AB-Abdomen exam you will become a valuable asset for the company you work for or want to work. You don't need to sacrifice your job hours or travel to distant training institutes for exam preparation when you have ARDMS AB-Abdomen Dumps for instant success. These AB-Abdomen dumps questions with authentic answers are compiled by ARDMS professionals and follow the actual exam's questioning style.

Getcertkey Abdomen Sonography Examination (AB-Abdomen) self-evaluation tests serve as a call to action, guiding you on how to improve your performance before the ARDMS AB-Abdomen real exam. Getcertkey's Abdomen Sonography Examination (AB-Abdomen) web-based and desktop practice dumps also provide candidates with a realistic AB-Abdomen Exam scenario, allowing them to experience the AB-Abdomen actual exam situation and prepare accordingly. Our AB-Abdomen practice questions offer an excellent opportunity to identify and practice the strategies that work best for you.

## Real AB-Abdomen Exam, AB-Abdomen Reliable Braindumps

Our AB-Abdomen guide torrent through the analysis of each subject research, found that there are a lot of hidden rules worth exploring, this is very necessary, at the same time, our AB-Abdomen training materials have a super dream team of experts, so you can strictly control the proposition trend every year. In the annual examination questions, our AB-Abdomen study questions have the corresponding rules to summarize, and can accurately predict this year's test hot spot and the proposition direction. This allows the user to prepare for the test full of confidence.

## ARDMS Abdomen Sonography Examination Sample Questions (Q88-Q93):

### NEW QUESTION # 88

Which liver neoplasm is associated with use of oral contraceptives and is most often seen in women under the age of 40?

- A. Cavemous hemangioma
- B. Adenoma
- C. Hepatoblastoma
- D. Hepatoma

Answer: B

Explanation:

Hepatic adenomas are benign liver tumors strongly associated with long-term use of oral contraceptives and are most frequently found in women under 40. Hepatoblastoma is seen in children; hepatoma (HCC) is a malignant tumor typically found in cirrhotic livers. Cavemous hemangioma is unrelated to oral contraceptives.

According to Rumack's Diagnostic Ultrasound:

"Hepatic adenomas occur predominantly in young women with a history of oral contraceptive use." Reference:

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

WHO Classification of Tumours of the Digestive System, 5th ed., IARC, 2019.

-

### NEW QUESTION # 89

Which finding is helpful to differentiate postsurgical breast scarring from a recurrent tumor?

- A. Irregular hypoechoic area
- B. Associated skin thickening
- C. Architectural distortion
- **D. Absent Doppler signal**

**Answer: D**

Explanation:

Postsurgical breast scarring may appear hypoechoic and irregular but typically shows no internal vascularity on Doppler imaging. In contrast, recurrent tumors generally exhibit increased internal vascular flow due to neovascularization. Therefore, absent Doppler signal helps suggest scar tissue rather than malignancy.

According to Stavros' Breast Ultrasound:

"The absence of internal Doppler flow favors scar tissue, whereas recurrent malignancy typically demonstrates internal vascularity."

Reference:

Stavros AT. Breast Ultrasound. Lippincott Williams & Wilkins, 2004.

AIUM Practice Parameter for Breast Ultrasound, 2020.

-

### NEW QUESTION # 90

During a renal artery Doppler study, which vessel should also be sampled to verify patency?

- A. Iliac vein
- B. Portal vein
- C. Inferior vena cava
- **D. Main renal vein**

**Answer: D**

Explanation:

The main renal vein should be assessed in addition to the renal arteries during renal Doppler exams. Venous thrombosis may coexist with arterial abnormalities and can impact renal perfusion. Evaluation of both arterial inflow and venous outflow ensures a comprehensive assessment of renal vascular patency.

According to Zwiebel's Introduction to Vascular Ultrasound:

"Renal vein assessment should be performed during renal artery Doppler studies to exclude venous thrombosis or outflow obstruction." Reference:

Zwiebel WJ, Pellerito JS. Introduction to Vascular Ultrasound. 6th ed. Elsevier, 2019.

AIUM Practice Parameter for Renal Artery Duplex Sonography, 2020.

-

### NEW QUESTION # 91

Which of the following is a possible early complication of a renal transplant?

- A. Transplant artery stenosis
- B. Transitional cell carcinoma

- C. Ureterocele
- **D. Acute tubular necrosis**

**Answer: D**

Explanation:

Acute tubular necrosis (ATN) is the most common cause of early graft dysfunction following renal transplantation. It results from ischemia-reperfusion injury during the transplantation process. Ultrasound findings may be nonspecific but Doppler may show elevated resistive indices.

Ureterocele (A) is a congenital anomaly.

Transplant artery stenosis (C) is a late complication.

Transitional cell carcinoma (D) is rare and not typically an early complication.

Reference Extracts:

Middleton WD, Kurtz AB, Hertzberg BS. Ultrasound: The Requisites. 3rd ed. Elsevier, 2015.

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

-

### NEW QUESTION # 92

In which position should a patient be placed when internal echoes are seen within a fluid-filled bladder?

- A. Fowler
- B. Erect
- **C. Lateral decubitus**
- D. Trendelenburg

**Answer: C**

Explanation:

Lateral decubitus positioning allows shifting of internal echoes within the bladder, helping differentiate mobile debris (such as blood clots or sediment) from adherent masses like tumors. This technique is helpful in evaluating questionable bladder filling defects.

According to Rumack's Diagnostic Ultrasound:

"Changing the patient's position, such as turning to the lateral decubitus, can help distinguish mobile debris from attached bladder wall lesions." Reference:

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

AIUM Practice Parameter for Bladder Ultrasound, 2020.

### NEW QUESTION # 93

.....

AB-Abdomen practice material contains questions & answers together with explanations. You can do your AB-Abdomen study plan according to your actual test condition. If your time is limited, you can remember the questions and answers for the AB-Abdomen preparation. While, if your time is enough for well preparation, you can study and analyze the answers with the help of the AB-Abdomen Exam explanations. No matter in which way you study for the ARDMS certification, our AB-Abdomen valid pdf dumps will ensure you 100% pass.
