永遠不要說你已經盡力了。這個對每個人的忠告，就算你認為自己沒有能力通過苛刻的Google的Professional-Cloud-Network-Engineer考試認證。因為就算你沒有通過Google的Professional-Cloud-Network-Engineer考試認證，你可以找一個快捷又方便省時又不費力的培訓工具，來幫助你通過Google的Professional-Cloud-Network-Engineer考試認證，VCESoft Google的Professional-Cloud-Network-Engineer考試培訓資料就是個很不錯的黃金培訓資料，它可以幫助你順利通過考試，保證100%通過，而且價格很合理，保證你利用了它會受益匪淺，所以說永遠不要說自己已經盡力了，不放棄下一秒就是希望，趕緊抓住你的希望吧，就在VCESoft Google的Professional-Cloud-Network-Engineer考試培訓資料裏。

最新的 Google Cloud Platform Professional-Cloud-Network-Engineer 免費考試真題 (Q72-Q77):

問題 #72

You have deployed a new internal application that provides HTTP and TFTP services to on-premises hosts.

You want to be able to distribute traffic across multiple Compute Engine instances, but need to ensure that clients are sticky to a particular instance across both services.

Which session affinity should you choose?

- A. Client IP and protocol
- **B. Client IP**
- C. Client IP, port and protocol
- D. None

答案： B

問題 #73

You want to use Cloud Interconnect to connect your on-premises network to a GCP VPC. You cannot meet Google at one of its point-of-presence (POP) locations, and your on-premises router cannot run a Border Gateway Protocol (BGP) configuration. Which connectivity model should you use?

- A. Partner Interconnect with a layer 2 partner
- B. Partner Interconnect with a layer 3 partner
- **C. Dedicated Interconnect**
- D. Direct Peering

答案： C

問題 #74

In order to provide subnet level isolation, you want to force instance-A in one subnet to route through a security appliance, called instance-B, in another subnet.

What should you do?

- A. Delete the system-generated subnet route and create a specific route to instance-B with a tag applied to instance-A.
- B. Move instance-B to another VPC and, using multi-NIC, connect instance-B's interface to instance-A's network. Configure the appropriate routes to force traffic through to instance-A.
- **C. Create a more specific route than the system-generated subnet route, pointing the next hop to instance-B with a tag applied to instance-A.**
- D. Create a more specific route than the system-generated subnet route, pointing the next hop to instance-B with no tag.

答案： C

問題 #75

You want to deploy a VPN Gateway to connect your on-premises network to GCP. You are using a non BGP-capable on-premises VPN device. You want to minimize downtime and operational overhead when your network grows. The device supports only IKEv2, and you want to follow Google-recommended practices.

What should you do?

- **A. Create a Cloud VPN instance.
Create a route-based VPN tunnel.
Configure the appropriate local and remote traffic selectors to 0.0.0.0/0.
Configure the appropriate static routes.**
- B. Create a Cloud VPN instance.
Create a route-based VPN tunnel.
Configure the appropriate local and remote traffic selectors to match your local and remote networks.
Configure the appropriate static routes.
- C. Create a Cloud VPN instance.
Create a policy-based VPN tunnel.
Configure the appropriate local and remote traffic selectors to match your local and remote networks.
Configure the appropriate static routes.
- D. Create a Cloud VPN instance.
Create a policy-based VPN tunnel per subnet.

Configure the appropriate local and remote traffic selectors to match your local and remote networks.
Create the appropriate static routes.

答案：A

問題 #76

You are using a 10-Gbps direct peering connection to Google together with the gsutil tool to upload files to Cloud Storage buckets from on-premises servers. The on-premises servers are 100 milliseconds away from the Google peering point. You notice that your uploads are not using the full 10-Gbps bandwidth available to you. You want to optimize the bandwidth utilization of the connection. What should you do on your on-premises servers?

- A. Compress files using utilities like tar to reduce the size of data being sent.
- B. Remove the -m flag from the gsutil command to enable single-threaded transfers.
- C. Use the `perfdiag` parameter in your gsutil command to enable faster performance: `gsutil perfdiag gs://[BUCKET NAME]`.
- D. Tune TCP parameters on the on-premises servers.

答案：C
