Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which of the following describes what user story acceptance criteria are?

- A. They describe the value delivered to the end user
- B. They tell when a user story is "done"
- C. They describe the role, the expected action, and the reason why the action is needed
- D. They are a checklist of key activities that must be completed to accept a story

Answer: B

Explanation:
Comprehensive and Detailed Explanation (250-300 words):
User story acceptance criteria define the conditions that must be met for a story to be considered complete or "done." Therefore, Option B is correct.
Acceptance criteria provide clear, testable statements that confirm whether the implemented functionality satisfies the business requirements. They help align Business Analysts, Developers, and Quality Analysts on expected behavior and success conditions. Option A describes a user story format, not acceptance criteria. Option C refers to task checklists, which are implementation-focused rather than outcome-focused. Option D describes business value, which belongs in the story description, not acceptance criteria.

NEW QUESTION # 35
Which team members are part of the Three Amigos meeting? (Select two)

- A. Quality Analyst
- B. Business Analyst
- C. Scrum Master
- D. Subject Matter Expert
- E. Project Manager

Answer: A,B

Explanation:
The Three Amigos meeting is a key Agile practice used in Guidewire projects to clarify user stories before development begins. It ensures shared understanding across execution roles and reduces defects caused by misinterpretation.
Two of the required participants in a Three Amigos session are the Business Analyst and the Quality Analyst, making Options A and B correct.
The Business Analyst represents business intent and functional requirements. They explain the user story, business rules, validations, and expected behavior.
The Quality Analyst represents the testing perspective. They focus on acceptance criteria, edge cases, and how the story will be validated to determine when it is "done." While Developers are typically the third "Amigo" in practice, they are not listed as an option in this question.
The Project Manager and Scrum Master facilitate delivery but do not play the execution-focused role of an Amigo. Subject Matter Experts provide input during elaboration but are not core participants in Three Amigos sessions.

NEW QUESTION # 36
Why is it important for non-developers to have a basic understanding of the data model?

- A. It is necessary for analysts writing configuration scripts

- B. It helps them determine whether a field exists in the out-of-the-box product
- C. It helps them complete product configuration
- D. It helps them know the underlying data when documenting change requests

Answer: B,D

Explanation:
A basic understanding of the Guidewire data model is essential for non-developers, especially Business Analysts, to effectively document requirements and evaluate change requests. The correct answers are Options B and C.
Understanding the data model helps analysts determine whether a field already exists in the out-of-the-box product (Option B). This knowledge prevents unnecessary customization and supports Guidewire's configure- over-customize principle.
It also enables analysts to understand the underlying data structure when documenting change requests (Option C). Analysts who understand entities, relationships, and field types can write clearer requirements and anticipate downstream impacts.
Non-developers are not responsible for writing configuration scripts or completing product configuration, making Options A and D incorrect.

NEW QUESTION # 37
Which answer(s) below describe UI architecture?

- A. It gives a similar look and feel to all Guidewire products
- B. It always includes these sections: summary, overview, status, workplan, loss details, exposures, contacts
- C. It is the tab bar, tabs, Unsaved Work icon, Options Menu icon, QuickJump Box
- D. It is made up of the common areas: Screen Area, Sidebar, Tab Bar, Info Bar, and the Workspace
- E. It lists the widget files that make up each screen in alphabetical order

Answer: A,D

Explanation:
Guidewire UI architecture defines the standard structure and layout used across all InsuranceSuite applications, ensuring consistency, usability, and predictability for end users and implementation teams. The correct answers are Option B and Option C.
One of the primary goals of Guidewire's UI architecture is to provide a consistent look and feel across all Guidewire products such as PolicyCenter, ClaimCenter, and BillingCenter. This consistency (Option B) reduces training effort, improves usability, and allows users to transition easily between applications without relearning navigation patterns.
Guidewire UI architecture is also defined by a set of common UI areas (Option C). These include the Tab Bar for high-level navigation, the Sidebar for context-sensitive navigation, the Screen Area for detailed business data, the Info Bar for contextual summaries, and the Workspace for supplementary information such as notes and activities. Together, these areas form the structural foundation of the Guidewire user interface.
The remaining options are incorrect. Option A describes a specific claim page layout rather than overall UI architecture. Option D refers to internal configuration artifacts, not UI architecture concepts. Option E lists UI elements but does not define architecture; it mixes navigation controls without explaining the structural layout.
Understanding UI architecture enables analysts to better document requirements, communicate effectively with developers, and ensure UI changes align with Guidewire standards.

NEW QUESTION # 38
Elaborate Requirements, Confirm Scope, Plan Project / Sprints, and Infrastructure Sizing are all part of this project phase?

- A. Development
- B. Pre-lnception
- C. Stabilization
- D. Inception

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
According to the Guidewire SurePath methodology, these specific activities are the core objectives of the Inception Phase (Option D).
* Confirm Scope: The primary goal of Inception is to move from the high-level scope defined in Pre- Inception to a detailed, agreed-upon scope (Minimum Viable Product).

* Elaborate Requirements:The team conducts workshops (often called "Elaboration" sessions) to break down high-level requirements into detailed User Stories.
* Infrastructure Sizing:While initial estimates may happen earlier, the definitive infrastructure sizing (hardware, cloud resources) is finalized during Inception once the scope and architecture are understood.
* Plan Project / Sprints:Inception concludes with a "Conceptual Sprint Plan" or release schedule, mapping out which stories will be delivered in which sprint.
Why other options are incorrect:
* A. Development:This phase is forexecutingthe plan (building and testing), not defining the scope or sizing the infrastructure.
* C. Pre-Inception:This phase is forpreparationand mobilization (staffing the team, setting up logistics), but the detailed "Elaboration" and "Sizing" happen once the full team starts in Inception.

NEW QUESTION # 39
......

It is a prevailing belief for many people that practice separated from theories are blindfold. Our InsuranceSuite-Analyst learning quiz is a salutary guidance helping you achieve success. The numerous feedbacks from our clients praised and tested our strength on this career, thus our InsuranceSuite-Analyst practice materials get the epithet of high quality and accuracy. We are considered the best ally to our customers who want to pass their InsuranceSuite-Analyst exam by their first attempt and achieve the certification successfully!
