## CCRN Pediatric Practice Exam Questions from AACN

A 1-month antique toddler provides with failure to thrive, common vomiting and irritability for the reason that delivery. The mom reviews having another toddler with the equal signs who died at 2 months of age. Which extra assessment locating could cause the nurse to suspect an inborn mistakes of metabolism?

- A) Micrognathia
- B) Microglossia
- C) Petite Facial Features

D) Musty Urine Odor - ANS-Answer: D) Musty urine odor: This is a common indicator of a metabolic disease, specially with a own family records of siblings demise early

- A) Micrognathia: This is not associated with an inborn errors of metabolism
- B) Microglossia: This isn't always associated with an inborn mistakes of metabolism
- C) Petite Facial Features: This isn't related to an inborn errors of metabolism

A 1-12 months-vintage who is ventilator established has been hospitalized due to the fact that birth. The doctor has indicated that the patient can be discharged home with a tracheostomy and a gastrostomy in one week. In order to decide the release wishes of the patient, the nurse need to set up for:

- A) Home nursing take care of the primary few days following discharge
- B) A social employee to meet with the family and determine adequacy of the house surroundings

C) An outreach educator to decide the gaining knowledge of wishes of the family  
D) A multidisciplinary care convention earlier than discharge - ANS-Answer: B) A social worker to satisfy with the family and examine adequacy of the home environment: The first predischage priority for a generation-dependent baby is to evaluate the adequacy of the house environemtn. Further discharge planning is then primarily based at the needs of the affected person and own family.

A) Home nursing care for the primary few days following discharge: While domestic nursing care can be wished after discharge, the primary predischage priority in this situation is to assess the house surroundings. From there, a willpower can be made approximately nursing care so one can be wished at domestic. The home might not be adequate for a safe transition for the little one.

C) An outreach educator to decide the getting to know wishes of the circle of relatives: Education may be necessary earlier than discharging a era-dependent baby, however that cannot be decided without similarly information approximately the patient's domestic environment and circle of relatives desires.

D) A multidisciplinary care convention earlier than discharge: This isn't always constant with Systems Thinking. Waiting until discharge for a multidisciplinary conference will not permit the family ok time to put together to fulfill the complicated needs of the kid at home.

A 10-day-vintage infant is admitted with a suspected congenital coronary heart disorder, due to a records of negative feeding and sudden onset of respiration distress and cyanosis. Initial evaluation shows:

## AACN Critical Care Nursing Exam Sample Questions (Q28-Q33):

### NEW QUESTION # 28

A mother tells the nurse "the doctor said that my child has pulmonic stenosis. What does it mean?" The nurse's best response should be:

- A. "Let me call your doctor so that your questions will be answered correctly"
- B. "It means that the baby has a heart failure"
- C. "You seemed very concerned. Your baby has a great doctor anyway"
- D. "What else did the doctor say about the disease"

**Answer: D**

Explanation:

Explanation: The nurse needs to know how much information the mother has before giving any information. We know that the disease is narrowing at the entrance to the pulmonary artery and may vary in severity and treatment. Calling the doctor at this point abdicates the role of the nurse.

### NEW QUESTION # 29

Upon assessing the mouth of a 4 year-old child, the nurse noted that the teeth have chalky white-to- yellowish staining with pitting of the enamel. Which of the following conditions would most likely explain these findings?

- A. Excessive fluoride intake
- B. Oral iron therapy
- C. Poor oral hygiene
- D. Tetracycline ingestion

**Answer: A**

Explanation:

Explanation: The findings are indicative of Fluorosis, a condition characterized by an increase in the extent and degree of the enamel's porosity. This problem is associated with repeated swallowing of toothpaste with fluoride and or drinking water with high levels of fluoride.

### NEW QUESTION # 30

What is the best method to ensure parents of a child with a new tracheostomy are adequately prepared for home care?

- A. Use the parents' preferred method of learning and evaluate as they perform care
- B. Demonstrate tracheostomy care daily and address the parent's concerns and questions thoroughly
- C. Provide the parents a video to watch and include them in ADL care
- D. Give the parents written instructions and answer their questions

**Answer: A**

Explanation:

Education must be individualized based on the parent's learning style and comprehension. Combining demonstration, return demonstration, written materials, and verbal teaching as preferred by the family ensures the greatest retention and competence. Ongoing evaluation of skills is essential before discharge.

"Use of preferred teaching methods, with return demonstration and skill validation, ensures family readiness for complex care like tracheostomy management." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Family-Centered Teaching and Discharge Readiness)

### NEW QUESTION # 31

An infant with tetralogy of fallot was admitted at the unit. Which of the following is indicative of physiologic adaptation of a client with tetralogy of fallot:

- A. ecchymoses
- B. shallow and irregular respirations.
- **C. digital clubbing**
- D. decrease platelet count

**Answer: C**

Explanation:

Explanation: There will be a poor peripheral circulation due to Hypoxia. Clubbing of fingers occur as a result of capillary development and tissue hypertrophy of the fingertips. There will be a rapid breathing.

#### NEW QUESTION # 32

A school age girl with rubella should be isolated from an unimmunized:

- A. 14 year old brother who had rubella as a child.
- B. 21 year old brother living at home.
- **C. 18 year old sister who has recently married.**
- D. 4 year old child who lives next door.

**Answer: C**

Explanation:

Explanation: An unimmunized woman like 18 year old sister who has recently got married and is exposed to rubella virus is at a higher risk. If she contracts the disease it may be transmitted to her fetus once she got pregnant. Option b has a lesser effect as it would probably be mild and confer immunity.

#### NEW QUESTION # 33

.....
