## AP-202 Pass Rate, Exam AP-202 Quick Prep

BraindumpStudy offers Salesforce AP-202 practice tests for the evaluation of B2B Commerce for Developers Accredited Professional exam preparation. Salesforce AP-202 practice test is compatible with all operating systems, including iOS, Mac, and Windows. Because this is a browser-based AP-202 Practice Test, there is no need for installation.

## Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q89-Q94):

### NEW QUESTION # 89

How should a developer get the grand total amount, including shipping and tax, for items in the cart and in the currency of the cart, when developing a new Lightning web component for an Aura storefront cart page?

- A. `{!Cart.Details.Fields.grandTotal}`
- B. `{!Cart.Fields.grandTotal}`
- C. `{!Cart.Details.grandTotal}`
- D. `{!Cart.Totals.grand Total}`

**Answer: A**

Explanation:

According to the B2B Commerce Developer Guide, the ICart interface provides access to the cart object and its related data. The Details property of the ICart interface returns an ICartDetails object, which contains information about the cart such as the currency, the subtotal, the shipping cost, the tax, and the grand total. The Fields property of the ICartDetails interface returns a map of field names and values for the cart object. Therefore, to get the grand total amount for items in the cart and in the currency of the cart, a developer should use the expression `{ICart.Details.Fields.grandTotal}`, which returns the value of the grandTotal field from the cart object. B2B Commerce Developer Guide, ICart Interface, ICartDetails Interface

### NEW QUESTION # 90

Which Lightning web component path allows a developer to view or edit a record while maintaining control over specifying its layout and set of fields?

- A. lightning-record-imperative
- B. lightning-record-edit-form
- C. lightning-record-form
- D. lightning-record-view-form

**Answer: B**

Explanation:

The lightning-record-edit-form component allows a developer to view or edit a record while maintaining control over specifying its layout and set of fields. This component provides a way to create forms that respect the field-level security and layout configuration defined in the Salesforce metadata. The developer can use lightning-input-field components inside the form to display and edit the fields of a record. The other options are incorrect because they either do not allow editing the record, do not respect the metadata configuration, or do not exist as valid component paths. lightning-record-edit-form | Lightning Web Components Developer Guide

### NEW QUESTION # 91

What does the developer need to implement to override Shipping in Checkout? 38m 04s

- A. `sfdc_checkout.CartShippingCharges`
- B. `sfdc_commerce.ShippingCharges`
- C. `sfdc_checkout.ShippingCharges`
- D. `sfdc_commerce.CartShippingCharges`

**Answer: A**

Explanation:

To override shipping charges during the checkout process, the developer needs to implement a specific interface, likely `sfdc_checkout.CartShippingCharges`. This interface would allow for custom logic to calculate and apply shipping charges based on the cart's contents and other criteria, ensuring flexibility and accuracy in handling shipping costs within the checkout flow.

### NEW QUESTION # 92

Which service method should be overridden in order to allow "without sharing" queries?

- A. `ccrz.ccService.query()`
- B. `ccrz.ccService.initSVCDAO()`
- C. `ccrz.ccService.queryWithoutSharing()`
- D. `ccrz.ccAPI.queryService()`

**Answer: B**

Explanation:

The service method that should be overridden in order to allow "without sharing" queries is `ccrz.ccService.initSVCDAO`. This method is responsible for initializing the service data access object (SVCDAO) that is used by the service class to perform queries. By overriding this method, the user can specify the sharing mode of the SVCDAO, which will determine whether the queries respect or ignore the sharing rules of the current user. For example, `ccrz.ccService.initSVCDAO(ccrz.ccAPI.SZ_WITHOUTSHARING)` will initialize the SVCDAO with the without sharing mode. Salesforce B2B Commerce and D2C Commerce Developer Guide, Service Classes, ccService Class

### NEW QUESTION # 93

Which two behaviors does a target value of lightning\_\_FlowScreen in metadata allow for a Lightning web component?

- A. It allows the Lightning web component to be used in guided user experiences to gather input
- B. It automatically generates configuration properties for the Lightning web component
- C. It allows the Lightning web component to replace standard functionality in flows and subflows
- D. It allows the Lightning Web component to be dragged onto a page in Lightning AppBuilder

**Answer: A,B**

Explanation:

A target value of lightning\_\_FlowScreen in metadata allows for a Lightning web component to be used in guided user experiences to gather input and to automatically generate configuration properties for the Lightning web component. The lightning\_\_FlowScreen target value specifies that the component can be used on a flow screen, which is a type of flow element that displays information and collects user input in a flow. A flow is a guided user experience that can automate business processes and guide users through screens, actions, and decisions. By using the lightning\_\_FlowScreen target value, the developer can expose their Lightning web component as a custom screen component that can be added to any flow screen. The developer can also use the @api decorator to expose public properties of their Lightning web component as configuration properties that can be set in Flow Builder. Flow Builder is a tool that allows the developer to create and modify flows using a drag-and-drop interface. A target value of lightning\_\_FlowScreen does not allow the Lightning web component to replace standard functionality in flows and subflows or to be dragged onto a page in Lightning App Builder, as these are not related to the flow screen target value. Salesforce Lightning Web Components Developer Guide: Configure Components for Flows, Lightning Web Components Developer Guide: Communicate with Flow, Lightning Flow Developer Guide: Screen Components Basics

### NEW QUESTION # 94

.....

The BraindumpStudy supports Salesforce AP-202 exam candidates by listening to their worries, resolving their problems, and offering them actual exam questions. The exam candidate has several concerns before choosing any platform. They want a platform that satisfies them and promises to help them prepare for the AP-202 test successfully on the first time.
