- B. Custom workflows
- C. User defined Splunk queries
- D. Predefined alert templates

Answer: D

Explanation:
Scheduling a Custom Alert for your environment consists of three steps: choosing the template you'd like to configure, previewing the search results, then scheduling the alert. Use Custom Alerts to configure email alerts using predefined templates so you're notified about specific activity in your environment. When an alert runs and finds results, it sends an email to specified recipients instead of generating a new detection. Custom Alerts let you set up email alerts based on predefined templates that cover a wide range of topics including Real Time Response session initiation, host containment, OS security settings, and more that are not yet covered by notification workflows.
