New 300-710 Braindumps Ebook, 300-710 Latest Exam Pass4sure

In recent years, fierce competition agitates the forwarding IT industry in the world. And IT certification has become a necessity. If you want to get a good improvement in your career, The method that using the BraindumpsIT's Cisco 300-710 Exam Training materials to obtain a certificate is very feasible. Our exam materials are including all the questions which the exam required. So the materials will be able to help you to pass the exam.

Cisco 300-710 certification exam is an industry-recognized standard that demonstrates the candidate's ability to implement and manage Cisco Firepower NGFW. 300-710 exam requires the candidate to demonstrate their ability to configure and manage security policies, IPS, URL filtering, and other security features of Cisco Firepower NGFW. Candidates who pass this certification exam are considered experts in managing and securing Cisco Firepower NGFW.

Understanding the General Outline

Cisco 300-710 is a well-structured exam that aims at directional learning. It is divided into four main domains, and each of them is focused on a different skill set and imparts updated cognizance.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q55-Q60):

NEW QUESTION # 55

A network engineer implements a new Cisco Firepower device on the network to take advantage of its intrusion detection functionality. There is a requirement to analyze the traffic going across the device, alert on any malicious traffic, and appear as a bump in the wire. How should this be implemented?

- **A. Configure a bridge group in transparent mode.**
- B. Enable routing on the Cisco Firepower
- C. Add an IP address to the physical Cisco Firepower interfaces.
- D. Specify the BVI IP address as the default gateway for connected devices.

Answer: A

Explanation:

Traditionally, a firewall is a routed hop and acts as a default gateway for hosts that connect to one of its screened subnets. A transparent firewall, on the other hand, is a Layer 2 firewall that acts like a "bump in the wire," or a "stealth firewall," and is not seen as a router hop to connected devices. However, like any other firewall, access control between interfaces is controlled, and all of the usual firewall checks are in place.

Layer 2 connectivity is achieved by using a "bridge group" where you group together the inside and outside interfaces for a network, and the ASA uses bridging techniques to pass traffic between the interfaces. Each bridge group includes a Bridge Virtual Interface (BVI) to which you assign an IP address on the network. You can have multiple bridge groups for multiple networks. In transparent mode, these bridge groups cannot communicate with each other.

NEW QUESTION # 57

What is an advantage of adding multiple inline interface pairs to the same inline interface set when deploying an asynchronous routing configuration?

- A. Allows traffic inspection to continue without interruption during the Snort process restart.
- **B. Allows the IPS to identify inbound and outbound traffic as part of the same traffic flow.**
- C. The interfaces disable autonegotiation and interface speed is hard coded set to 1000 Mbps.
- D. The interfaces are automatically configured as a media-independent interface crossover.

Answer: B

NEW QUESTION # 58

With Cisco AMP for Endpoints, which option shows a list of all files that have been executed in your environment?

- Answer: E**

On the advanced tab under inline set properties, which allows interfaces to emulate a passive interface?

- Answer: A**
