NEW QUESTION # 274

Which logs enable a firewall administrator to determine whether a session was decrypted?

- A. Traffic
- B. Correlated Event
- C. Security Policy
- D. **Decryption**

Answer: D

Explanation:

<https://live.paloaltonetworks.com/t5/certification-articles/pcnse-and-pcnsa-exam-changes-with-10-0/ta-p/344832>

<https://docs.paloaltonetworks.com/pan-os/10-1/pan-os-admin/decryption/troubleshoot-and-monitor-decryption/decryption-logs.html> The Decryption Log (Monitor Logs Decryption) provides comprehensive information about sessions that match a

Decryption policy to help you gain context about that traffic so you can accurately and easily diagnose and resolve decryption issues. The firewall does not log traffic if the traffic does not match a Decryption policy.

NEW QUESTION # 275

An engineer troubleshoots a high availability (HA) link that is unreliable. Where can the engineer view what time the interface went down?

- A. **Monitor > Logs > System**
- B. Monitor > Logs > Traffic
- C. Dashboard > Widgets > High Availability
- D. Device > High Availability > Active/Passive Settings

Answer: A

NEW QUESTION # 276

An administrator plans to deploy 15 firewalls to act as GlobalProtect gateways around the world Panorama will manage the firewalls The firewalls will provide access to mobile users and act as edge locations to on-premises infrastructure The administrator wants to scale the configuration out quickly and wants all of the firewalls to use the same template configuration Which two solutions can the administrator use to scale this configuration? (Choose two.)

- A. virtual systems
- B. variables
- C. **collector groups**
- D. template stacks
