CompTIA DataSys+ Certification Exam Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which of the following is used to store product quantities on a table while ensuring the minimal amount of storage is consumed?

- **A. INTEGER**
- B. FLOAT
- C. DOUBLE
- D. COUNT

Answer: A

Explanation:

INTEGER data types efficiently store whole numbers like product quantities using minimal storage compared to floating-point types.

NEW QUESTION # 58

Which of the following is the best alternative to control the temperature in a data center?

- A. Redundant CO2 units
- **B. Redundant AC units**
- C. Redundant CPU fans
- D. Redundant rack fans

Answer: B

Explanation:

Redundant air conditioning units provide reliable temperature control in data centers, ensuring continuous cooling even if one unit fails, which is critical for preventing overheating.

NEW QUESTION # 59

A database administrator needs to ensure database backups are occurring on a daily basis and at scheduled times. Which of the

following actions should the administrator take?

- A. Review the backup media.
- B. Query the database to observe entries.
- **C. Review the server logs for entries.**
- D. Check the database schema.

Answer: C

Explanation:

The action that the administrator should take is to review the server logs for entries. Server logs are files that record the events and activities that occur on a server, such as database backups, errors, warnings, or failures. By reviewing the server logs, the administrator can verify that the database backups are occurring on a daily basis and at scheduled times, and also identify any issues or anomalies that may affect the backup process or the backup quality. The other options are either not relevant or not sufficient for this task. For example, querying the database to observe entries may not show the backup status or frequency, checking the database schema may not reflect the backup schedule or policy, and reviewing the backup media may not indicate the backup time or duration.

NEW QUESTION # 60

Which of the following does a database administrator need to know before planning the setup of a new server for a client?

- A. The transaction logs for the server
- B. The performance of the server
- **C. The size and importance of the server**
- D. The connectivity status of the server

Answer: C

Explanation:

Knowing the size and importance of the server is crucial for proper planning, as it determines the required resources, configurations, and level of redundancy needed to meet the client's needs.

NEW QUESTION # 61

Which of the following is used to document the system catalog in a database?

- A. Project plan
- B. Standard operating procedure
- C. System requirements documentation
- **D. Data dictionary**

Answer: D

Explanation:

A data dictionary documents the system catalog by providing metadata about database objects, their structure, and relationships within the database.
