Salesforce Platform Developer I (PDI) Sample Questions (Q179-Q184):

NEW QUESTION # 179
A Developer Edition org has five existing accounts. A developer wants to add 10 more accounts for testing purposes.
The following code is executed in the Developer Console using the Execute Anonymous window:
How many total accounts will be in the org after this code is executed?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
* The code snippet in question creates and inserts an account namedMyAccountand then initializes a loop to add additional accounts.
* The loop runs fromx = 1and continues adding accounts untilx < 10.
* Since the conditionx++is post-increment, the loop runs exactly 10 times, creating and adding 10 new accounts to thenewAccountslist.
* At the end, theinsertDML statement persists these 10 new accounts, along with the already existing account (MyAccount).
Total accounts in the org:
* Existing accounts = 5
* New accounts added = 10
* Total = 15

NEW QUESTION # 180
A developer needs to have records with specific field values in order to test a new Apex class.
What should the developer do to ensure the data is available to the test?

- A. Use Anonymous Apex to create the required data.
- B. UseSOQL to query the org for the required data.
- C. Use Test.Loaddata () and reference a CSV file
- D. Use Test.Loaddata () and reference a static resource.

Answer: D

NEW QUESTION # 181
A developer must provide a custom user interface when users edit a Contact. Users must be able to use the interface in Salesforce Classic and Lightning Experience.
What should the developer do to provide the custom user interface?

- A. Override the Contact's Edit button with a Lightning page in Salesforce Classic and a Visualforce page in Lightning Experience.
- B. Override the Contact's Editbutton with a Lightning component in Salesforce Classic and a Lightning component in Lightning Experience.

- C. Override the Contact's Edit buttonwith a Visualforce page in Salesforce Classic and a Lightning component in Lightning Experience.
- D. Override the Contact's Edit button with a Visualforce page in Salesforce Classic and a Lightning page inLightning Experience.

Answer: C

NEW QUESTION # 182
Managers at Universal Containers want to ensure that only decommissioned containers are able to be deleted in the system. To meet the business requirement a Salesforce developer adds "Decommissioned" as a picklist value for the Status _c custom field within the Container _c object.
Which two approaches could a developer use to enforce only Container records with a status of "Decommissioned" can be deleted?
Choose 2 answers

- A. After record-triggered flow
- B. Validation rule
- C. Apex trigger
- D. Before record-triggered flaw

Answer: B,C

Explanation:
* Apex Trigger (Option B):
* An Apex trigger can be written on theContainer__cobject to prevent deletion unless theStatus__cfield value is "Decommissioned".
* This allows custom logic to be executed during the deletion process.
:Apex Triggers Documentation
Validation Rule (Option D):
A validation rule is typically used to enforce conditions during record creation or update. However, it cannot directly restrict deletions.
To ensure deletion restriction, an Apex trigger is more effective.
Not Suitable:
Option A(Before record-triggered flow): Flows triggered "before delete" are not available.
Option C(After record-triggered flow): These occur after a record is deleted, so they cannot prevent the deletion process.

NEW QUESTION # 183
Universal Hiring uses Salesforce to capture job applications. A salesforce administrator created two custom objects; Job__c acting as the master object, to Application_c acting as the detail.
Within the Job__c object, a custom multi-select picklist, preferred _Locations__c, contains a list of approved states for the position.
Each Job_Application__c record relates to a Contact within the system through a master-detail relationship.
Recruiters have requested the ability to view whether the Contact's Mailing State value matches a value selected on the Preferred Locations__c field, within the Job_Application__c record. Recruiters would like this value to be kept in sync if changes occur to the Contact's Mailing State.
What is the recommended tool a developer should use to meet the business requirement?

- A. Apex trigger
- B. Roll-up summary field
- C. Record-triggered flow

Answer: C

Explanation:
A record-triggered flow is the recommended tool for this scenario because it:
* Can compare the Contact.MailingState field with the Preferred_Locations__c field on the Job__c record.
* Automatically updates or calculates values whenever changes are made, keeping data in sync without requiring Apex code or custom development.
