## HPE Aruba Networking ClearPass Exam Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Which ClearPass component helps identify the type of device connecting to the network for segmentation purposes?

Response:

- A. RADIUS Accounting Module
- B. Endpoint Repository
- **C. Device Profiling Engine**
- D. Access Tracker

**Answer: C**

### NEW QUESTION # 37

An IT manager needs to ensure that a user who has lost their smartphone can onboard a new device while blocking access to the old one. What steps should the IT manager follow to meet this need using ClearPass Onboard?

- A. Revoke the certificate of the old device, delete all metadata, and onboard the new device.
- B. Delete the user account, create a new account for the user, and onboard the new device.
- **C. Block access to the old device, revoke its certificate, and issue a new certificate to the new device.**

**Answer: C**

Explanation:

ClearPass Onboard manages security via unique device certificates. When a device is lost, the most critical step is to revoke its certificate. This adds the certificate to the Certificate Revocation List (CRL) or updates the OCSP status, ensuring that if the old device tries to connect, ClearPass will reject it. The manager then marks the device as "Blocked" and allows the user to repeat the Onboarding process for their new device, which receives its own distinct certificate.

### NEW QUESTION # 38

An organization wants to enforce role-based access policies across their entire network to ensure that users have appropriate access privileges regardless of their connection point. How does ClearPass facilitate this requirement?

- A. By providing detailed audit logs of all network activity
- B. By offering customizable user authentication methods
- **C. By allowing the creation of individual user roles with associated privileges that applies anywhere on the network**

**Answer: C**

Explanation:

ClearPass enables role-based access control (RBAC) by allowing administrators to create individual user roles with defined privileges that are enforced consistently across wired, wireless, and VPN connections. This ensures that users maintain the same level of network access regardless of where or how they connect.

### NEW QUESTION # 39

A network engineer is reviewing the policy cache tab for an endpoint in the Identity: Endpoints Database.

They notice the cache was updated three minutes ago. What can the engineer conclude about the current status of the endpoint's role or posture token?

- A. The endpoint's role or posture token has expired and needs to be reassigned immediately.
- **B. The endpoint's role or posture token is still valid and will be updated if necessary within the next two minutes.**
- C. The policy cache will not expire until the endpoint is disconnected from the network.

**Answer: B**

Explanation:

Policy cache entries in ClearPass typically have a default life-cycle of 5 minutes. If the cache was updated three minutes ago, it has two minutes of validity remaining. During this time, ClearPass will use the cached roles and posture status for any incoming requests.

from that device. Once the 5-minute mark is reached, the cache expires, and ClearPass will perform a full re-evaluation on the next request.

#### NEW QUESTION # 40

An IT administrator notices that a client endpoint has failed a health check and wants to send a notification that will not only inform the user but also force the client to re-authenticate. Which action should the administrator take?

- A. Send a notification to disable the network interface.
- **B. Send a notification with an action to restart the session.**
- C. Send a message to disable the network interface.

**Answer: B**

Explanation:

The administrator should send a notification with an action to restart the session. This forces the client to re-authenticate after failing a health check, allowing ClearPass to reassess the device's compliance status and apply the appropriate enforcement policy based on the updated posture.

#### NEW QUESTION # 41
