Different with other similar education platforms on the internet, the SAP Certified Associate - Process Data Analyst - SAP Signavio guide torrent has a high hit rate, in the past, according to data from the students' learning to use the C-SIGDA-2403 test torrent, 99% of these students can pass the qualification test and acquire the qualification of their yearning, this powerfully shows that the information provided by the C-SIGDA-2403 Study Tool suit every key points perfectly, targeted training students a series of patterns and problem solving related routines, and let students answer up to similar topic.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q48-Q53):

NEW QUESTION # 48
How do you filter all published processes in the workspace?

- A. Type the word "Publish" in the Search field and press Enter.
- B. Switch to Advanced Search, and select the field "Publishing state".
- C. Switch to Advanced Search, and select the field "Publishing date".
- D. Type the word "Publishing state" in the search field and press Enter.

Answer: D

NEW QUESTION # 49
What is the purpose of Content Assessment Workflows?Note: There are 2 correct answ-ers to this que-stion.

- A. Route process-content, such as documents, to a process owner.
- B. Detect outdated information earlier.
- C. Ensure multiple people are made aware of the workflow.
- D. Ensure information is correct and up-to-date.

Answer: B,D

NEW QUESTION # 50
What is a variant in Process Mining?

- A. A variant visualizes all tasks to complete the process
- B. A variant backtracks the process flow
- C. A variant is a digital footprint of system-based events
- D. A variant is a set of cases with the same sequence of events

Answer: D

Explanation:
In Process Mining, a variant represents a unique sequence of activities performed in a process, as derived from event log data. The SAP Signavio Process Intelligence Documentation clearly defines this concept:
* Exact Extract:"A process variant is a unique sequence of activities (events) that a set of cases follows.
Each variant represents a distinct path through the process, and Process Mining tools like the Variant Explorer Widget identify and visualize these paths to show how processes are executed in reality." (SAP Signavio Process Intelligence User Guide, section on "Process Variants and Variant Explorer").
* Explanation:
* Option D (A variant is a set of cases with the same sequence of events):This is correct because a variant groups all cases that follow the identical sequence of activities, allowing analysts to identify common or deviant process paths. For example, in an order-to-cash process, one variant might include "Order Created # Order Confirmed # Shipped," while another might include an additional "Order Revised" step.
* Option A (A variant is a digital footprint of system-based events)is incorrect because the digital footprint refers to the event log as a whole, not a specific variant. Variants are derived from this footprint during analysis.
* Option B (A variant visualizes all tasks to complete the process)is incorrect as variants show specific sequences, not all possible tasks. The Process Discovery Widget visualizes the overall process, not individual variants.

* Option C (A variant backtracks the process flow)is incorrect because backtracking is a function of widgets like Process Discovery, not the definition of a variant.

NEW QUESTION # 51

What are some possible configurations for a task created in SAP Signavio Process Governance?Note: There are 3 correct answ-ers to this que-stion.

- A. Set a due date.
- B. Store attributes.
- C. Assign it to a specific user.
- D. Add subtasks.
- E. Assign it to dictionary categories.

Answer: A,C,D

NEW QUESTION # 52

How does Process Mining help companies? Note: There are 2 correct answers to this question.

- A. By analyzing user experience and visualizing them in the Collaboration Hub
- B. By creating different data views
- C. By adapting to rapid changes in the global market and customer expectations
- D. By preparing data that's used when analyzing processes

Answer: C,D

Explanation:
Process Mining in SAP Signavio enables companies to gain insights into their actual process execution, supporting data-driven decision-making. The SAP Signavio documentation explains:
* Option A (By preparing data that's used when analyzing processes):Process Mining involves extracting and transforming event log data from source systems, preparing it for analysis touncover process inefficiencies, bottlenecks, or deviations. This data preparation is a core function of Process Mining.
* Option C (By adapting to rapid changes in the global market and customer expectations):By providing visibility into real process performance, Process Mining helps companies identify areas for improvement, enabling them to adapt processes to meet changing market demands and customer needs, such as faster delivery or improved service quality.
* Option B (By analyzing user experience and visualizing them in the Collaboration Hub)is incorrect because user experience analysis is more aligned with Customer Journey Mapping, not Process Mining, which focuses on process execution data.
