

GES-C01 Dumps Free, New GES-C01 Exam Pattern

2026 Latest Exams 4sures GES-C01 PDF Dumps and GES-C01 Exam Engine Free Share: <https://drive.google.com/open?id=1oidJ34Uno-xwR2Z5MdY6w9Xzov7O1zX>

GES-C01 study material is suitable for all people. Whether you are a student or an office worker, whether you are a veteran or a rookie who has just entered the industry, GES-C01 test answers will be your best choice. For office workers, GES-C01 test dumps provide you with more flexible study time. You can download learning materials to your mobile phone and study at anytime, anywhere. And as an industry rookie, those unreadable words and expressions in professional books often make you feel mad, but GES-C01 Study Materials will help you to solve this problem perfectly.

Our GES-C01 practice questions enjoy great popularity in this line. We provide our GES-C01 exam braindumps on the superior quality and being confident that they will help you expand your horizon of knowledge of the exam. They are time-tested GES-C01 Learning Materials, so they are classic. As well as our after-sales services. And we can always give you the most professional services on our GES-C01 training guide.

2026 Snowflake GES-C01: SnowPro® Specialty: Gen AI Certification Exam Authoritative Dumps Free

On the one hand, GES-C01 test torrent is revised and updated according to the changes in the syllabus and the latest developments in theory and practice. On the other hand, a simple, easy-to-understand language of GES-C01 test answers frees any learner from any learning difficulties - whether you are a student or a staff member. These two characteristics determine that almost all of the candidates who use GES-C01 Guide Torrent can pass the test at one time. This is not self-determination. According to statistics, by far, our GES-C01 guide torrent has achieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the GES-C01 test torrent is updated every day.

Snowflake SnowPro® Specialty: Gen AI Certification Exam Sample Questions (Q166-Q171):

NEW QUESTION # 166

A team is designing a complex Gen AI application in Snowflake, which includes components for training a custom LLM, running batch inference, and providing a real-time conversational interface. They plan to leverage Snowpark Container Services (SPCS) for these workloads. Which of the following statements accurately describe the suitable SPCS service design models and important considerations for these different application components? (Select all that apply.)

- A. For batch inference on Snowflake data where data locality and efficiency are key, using "Service Functions" is highly efficient because data is passed as input parameters directly from SQL queries, and this design ensures the data never leaves the Snowflake network boundary.
- B. Real-time LLM inference for a conversational interface is ideally deployed as a 'Service' in SPCS, which is long-running and accessible via an HTTP endpoint, ensuring continuous availability and responsiveness.
- C. GPU-accelerated LLM training, which is a finite and often resource-intensive task, is best implemented as a "job" in SPCS, invoked via "EXECUTE JOB SERVICE", as it is designed to run to completion and then spin down.
- D. Container images for SPCS deployments are typically pushed to a public Docker Hub repository, and Snowflake pulls them as needed during service creation and scaling, simplifying image management.
- E. When deploying LLMs to SPCS, it's generally most cost-efficient to use generic CPU instance types like 'CPU X64 XS' for all tasks, as GPU instances (e.g., are exclusively for highly specialized computer vision tasks and not optimized for LLMs.

Answer: A,B,C

Explanation:

Options A, B, and C are correct descriptions of SPCS service design models and their applications. Option A is correct: Jobs in SPCS are containerized tasks that execute and run to completion, making them ideal for finite operations like GPU-accelerated machine learning model training. Option B is correct: Services are designed for long-running applications, offering continuous availability and accessibility via internal and external endpoints, which is suitable for real-time inference in conversational interfaces. Option C is correct: Service Functions are callable computations that accept data as input, often from SQL queries. A key advantage is that data processing occurs within the Snowflake network boundary, making them efficient and secure for data-intensive tasks like batch inference. Option D is incorrect: While is a cost-effective CPU instance, GPU instances like 'GPU_NV_M' are explicitly optimized for 'intensive GPU usage scenarios like Computer Vision or LLMs/VLMs'. Therefore, using CPU-only instances for all LLM tasks, especially performance-critical ones, is not the general best practice. Option E is incorrect: Container images for Snowpark Container Services are stored in Snowflake's OCIv2 compliant Image Registry, not typically pulled directly from public Docker Hub repositories for deployment within Snowflake. The image registry has a unique hostname which allows OCI clients to access it via REST API calls, and images are pushed to image repositories within this registry.

NEW QUESTION # 167

A data engineering team aims to automatically classify incoming customer support requests into predefined categories ('Technical Issue', 'Billing Inquiry', 'General Question') as part of their Snowflake data ingestion pipeline. The goal is to achieve high classification accuracy while managing LLM inference costs efficiently. Which of the following strategies, when applied within a Snowflake data pipeline using Streams and Tasks, would best contribute to meeting these objectives?

- A. Option B
- B. Option D
- **C. Option A**
- D. Option E
- E. Option C

Answer: C

Explanation:

NEW QUESTION # 168

A security engineer is developing an application that uses the Snowflake Cortex REST API to interact with LLMs, specifically to obtain structured outputs for text classification and to ensure secure communication. They are focusing on the `/api/v2/cortex/inference` : complete endpoint. Which of the following statements correctly describe aspects of this interaction?

- **A. Authentication for Cortex REST API requests is primarily handled through an Authorization: Bearer header, where the token can be a JSON Web Token (JWT), OAuth token, or programmatic access token.**
- B. To ensure the most consistent and deterministic structured output from the LLM, it is recommended to set the temperature option to a higher value, such as 0.7 or 1.0, in the request payload.
- **C. For models like OpenAI (GPT) used via the Cortex REST API with structured output, the JSON schema in the response_format field must include "additionalProperties": false and a "required" field listing all properties at every node.**
- D. The Cortex REST API for LLM inference always returns the complete LLM response as a single, fully-formed JSON object once generation is finished, regardless of any streaming options.
- **E. To strictly enforce a JSON schema for the LLM's response, the response_format parameter must be included in the request body, supplied as a JSON schema object, which helps reduce post-processing efforts.**

Answer: A,C,E

Explanation:

NEW QUESTION # 169

A data application developer is building a Streamlit chat application that interacts with structured data using Cortex Analyst, a feature of Snowflake Cortex that is often integrated into Cortex Agents. The developer wants to ensure efficient multi-turn conversations and leverage verified queries. Which of the following statements represent best practices and functional aspects for this scenario within Snowflake's Gen AI ecosystem?

□

- A. Option B
- B. Option D
- C. Option A
- D. Option E
- E. Option C

Answer: A,B

Explanation:

The 'verified_queries' section of the semantic model must use the names of the logical tables and columns defined in the semantic model, not those in the underlying dataset. This makes option B correct. For suggested questions in Cortex Analyst, configuring onboarding questions is done by setting the 'use_as_onboarding_question' flag to 'true' in the verified query definition within the semantic model, which will return all such flagged questions regardless of similarity to user input. This makes option D correct. Option A is incorrect because Snowflake Cortex Analyst 'adds' an LLM summarization agent internally to support multi-turn conversations, it is not something the application developer has to implement separately. Option C is incorrect; while larger models generally have better performance, Cortex Analyst aims to select the smallest model that satisfies the need, balancing latency and performance. Option E describes Document AI's '!PREDICT' method, which extracts information from documents, but it is not directly how a Cortex Agent (which orchestrates and uses tools) would 'process documents' in a general sense within a Streamlit app; rather, Cortex Agents might 'use' Document AI as a tool or Cortex Parse Document or other methods, not necessarily '!PREDICT' directly in the chat logic.

NEW QUESTION # 170

A data engineer is setting up a Document AI pipeline to extract information from scanned invoices stored in an internal stage named 'invoice_stage'. They have created the stage using 'CREATE STAGE' and uploaded several PDF documents. However, when attempting to run the extraction query, they encounter an error message: 'File extension does not match actual mime type. Mime-Type: application/octet-stream!'. Additionally, they anticipate a privilege issue might arise for pipeline automation. Which of the following conditions must be met to resolve the current error and ensure proper setup for Document AI extraction and subsequent pipeline creation?

□

- A. Option B
- B. Option D
- C. Option C
- D. Option A
- E. Option E

Answer: C,D

Explanation:

□

NEW QUESTION # 171

.....

If you choose our GES-C01 exam review questions, you can share fast download. As we sell electronic files, there is no need to ship. After payment you can receive GES-C01 exam review questions you purchase soon so that you can study before. If you are urgent to pass exam our exam materials will be suitable for you. Mostly you just need to remember the questions and answers of our Snowflake GES-C01 Exam Review questions and you will clear exams. If you master all key knowledge points, you get a wonderful score.
